Coddling of the American Mind

Drawing on the book The Coddling of the American Mind*, Kerby Anderson examines the insanity on college campuses where students cannot handle ideas and people they disagree with.*

In this article we will talk about what is happening on college campuses, and even focus on why it is happening. Much of the material is taken from the book, *The Coddling of the American Mind.*{1}

Greg Lukianoff was trying to solve a puzzle and sat down with Jonathan Haidt. Greg was a first amendment lawyer working with the Foundation for Individual Rights in Education (FIRE). He was trying to figure out why students (who used to support free speech on campus) were now working to prevent speakers from coming on campus and triggered by words or phrases used by professors.

Greg also noticed something else. He has suffered from bouts of depression and noticed some striking similarities with some of the comments by students. He found in his treatment that sometimes he and others would engage in "catastrophizing" and assuming the worst outcome. He was seeing these distorted and irrational thought patterns in students.

After a lengthy discussion they decided to write an article about it for *The Atlantic* with the title, "Arguing Towards Misery: How Campuses Teach Cognitive Distortions." The editor suggested the more provocative title, "The Coddling of the American Mind." The piece from *The Atlantic* was one of the most viewed articles of all time and was then expanded to this book.

That book used the same title: *The Coddling of the American Mind*. Jonathan was on *Point of View* last year to talk about the book. The authors believe that these significant

psychological changes that have taken place in the minds of students explain much of the campus insanity we see on campus today.

They point out that two terms rose from obscurity into common campus parlance. Microaggressions are small actions or word choices that are now thought as a kind of violence. Trigger warnings are an alert the professors now must use if they may be discussing a topic that might generate a strong emotional response.

Before we talk about some of the insight in the book, it is worth mentioning that though there is a psychological component to all of this insanity, there is also an ideological component. When the original article appeared, Heather MacDonald asked if "risk-adverse child-rearing is merely the source of the problem. For example, why aren't heterosexual white males demanding safe spaces?"{2} They all had the same sort of parents who probably coddled many of them.

It would probably be best to say that the mixture of psychological deficits also with the liberal, progressive ideological ideas promoted on campus have given us the insanity we see today. We have had liberal teaching on campuses for a century, but the problem has become worse in the last decade because of the psychological issues described in the book, *The Coddling of the American Mind*.

Three Untruths (Part 1)

The book can easily be summarized in three untruths that make up the first three chapters of the book. The first is the "Untruth of Fragility: What Doesn't Kill You Makes You Weaker." Nietzsche's original aphorism was, "What doesn't kill you makes you stronger." The younger generation has turned this idea on its head.

It is true that some things are fragile (like china teacups), while other things are resilient (and can withstand shocks). But they also note that some things are *antifragile*. In other words, they actually require stressors and challenges to grow. Our muscles are like that. Our immune system is like that. And university education is supposed to be like that. Students are supposed to be challenged by new ideas, not locked away in "safe spaces."

Unfortunately, most young people have been protected by a culture that promotes what they refer to as "safetyism." It has become a cult of safety that is obsessed with eliminating threats (whether real or imagined) to the point where fragility becomes expected and routine. And while this is true for the millennial generation (also called Generation Y), it is even truer for the iGen generation (also called Generation Z) who are even more obsessed with safety.

Part of the problem in these untruths is what they call "concept creep." Safety used to mean to be safe from physical threats. But that has expanded to the idea that safety must also include emotional comfort. In order to provide that comfort, professors and students a few years ago introduced the idea of creating "safe spaces" for students. And in order to keep those students emotionally safe in the classroom, professors must issue "trigger warnings" so these students don't experience trauma during a classroom lecture or discussion.

The second untruth is the "Untruth of Emotional Reasoning: Always Trust Your Feelings." You can get yourself in some difficult circumstances quickly if you always trust your emotions. It is easy in this world to get frustrated, discouraged, and even depressed. Psychologists have found that certain patients can get themselves caught in a feedback loop in which irrational negative beliefs cause powerful negative feelings. We are seeing that on college campuses today.

Psychologists describe “the cognitive triad” of depression. These are: “I’m no good” and “My world is bleak” and “My future is hopeless.” Psychologists have effective ways of helping someone break the disempowering feedback cycle between negative beliefs and negative emotions. But very few adults (parents, professors, administrators) are working to correct mistaken ideas.

Three Untruths (Part 2)

In a college classroom, students are apt to make some sweeping generalization and engage in simplistic labeling of the lecture or reading material. In that case, we would hope that a professor would move the discussion by asking questions or even challenging the assertion.

Instead, many professors and colleges go along with the student comments. In fact, many even argue that any perceived slight adds up to what today are called “microaggressions.” In many cases, slights may be unintentional and actually wholly formed from the listener’s interpretation.

Here is how it develops. First, you prevent certain topics from being discussed in class. Next, you prevent certain speakers from coming to campus because they might present a perspective that aggrieved students believe should not be discussed. In the book is a chart illustrating how many speakers have been disinvited from universities. Five years ago, the line jumps up significantly.

The third untruth follows from that assumption. It is the “Untruth of Us Versus Them: Life is a Battle Between Good People and Evil People.” The authors argue that “the human mind is prepared for tribalism.” They even provide psychological research demonstrating that. But that doesn’t mean we have to live that way. In fact, conditions in society can turn tribalism up, down, or off. Certain conflicts can

turn tribalism up and make them more attentive to signs about which team a person may be on. Peace and prosperity usually turn tribalism down.

Unfortunately, in the university community, distinctions between groups are not downplayed but emphasized. Distinctions defined by race, gender, and sexual preference are given prominence. Mix that with the identity politics we see in society, and you generate the conflict we see almost every day in America.

The authors make an important distinction between two kinds of identity politics. Martin Luther King, Jr. epitomized what could be called "common-humanity identity politics." He addressed the evil of racism by appealing to the shared morals of Americans using the unifying language of religion.

That is different from what we find on college campuses today that could be called "common-enemy identity politics." It attempts to identify a common enemy as a way to enlarge and motivate your tribe. Their slogan sounds like this: Our battle for identity and survival is a battle between good people and bad people. We're the good guys and need to defeat the bad guys.

An Example: Evergreen State College

One good example of how these untruths play out can be found at what happened on a college campus in Olympia, Washington. The entire story is described in chapter five but also is featured prominently in the opening chapter of the book *No Safe Spaces* and in the movie with the same title.

Just a few years ago, Evergreen State College was probably best known as the alma mater for rapper Macklemore and Matt Groening, the creator of *The Simpsons*. That all changed with an email biology professor Bret Weinstein sent.

In the past, the school had a tradition known as the “National Day of Absence.” Usually, minority faculty and students leave the campus for a day to make a statement. But in 2017, the college wanted to change things and wanted white students and faculty to stay away from campus.

Professor Weinstein argued in an email that there is a difference between letting people be absent and telling people “to go away.” And he added that he would show up for work. When he did, he was confronted by a mob of students. When the administration tried to appease the demonstrators, things got worse.

Weinstein has described himself as a political progressive and left-leaning libertarian. But his liberal commitments did not protect him from the student mob. The campus police warned him about a potential danger. The next morning, as he rode his bike into town, he saw protesters poised along his route tapping into their phones. He rode to the campus police department and was abruptly told: “You’re not safe on campus, and you’re not safe anywhere in town on your bicycle.” Weinstein and his wife eventually resigned and finally received a financial settlement from the university.

The Evergreen students and faculty displayed each of the three great untruths. The Untruth of Fragility (What doesn’t kill you makes you weaker) came from a faculty member who supported the protesters and addressed some of her faculty colleagues in an angry monologue. She warned, “I am too tired. This [blank] is literally going to kill me.” A student at a large town hall meeting verbalized her anxiety and illustrated the Untruth of Emotional Reasoning (Always trust your feelings). She expressed, “I want to cry. I can’t tell you how fast my heart is beating. I am shaking in my boots.”

And the whole episode illustrates the Untruth of Us Versus Them (Life is a battle between good people and evil people).

The students and faculty engaged in common-enemy identity politics by labeling a politically progressive college and liberal professors as examples of white supremacy. One student (who refused to join the protest) later testified to the college trustees, “If you offer any kind of alternative viewpoint, you’re the enemy.”

What Can We Do?

The book, *The Coddling of the American Mind*, identifies many disturbing trends on college campuses that are beginning to spill over into society. What can we do to stem the tide?

Obviously, the long-term solution to the insanity on campus and in society is to pray for revival in the church and spiritual awakening in America. But there are some practical things that must be done immediately.

First, college administrators must get control of their campus. The riots at some of these universities resulted in violence and property destruction. Often the campus police and even the local police failed to take action. Sadly, the university administration rarely took action afterwards.

Some form of deterrence would have prevented future actions on the University of California, Berkeley campus. Instead, the inaction established a precedent that likely allowed the conflict at Middlebury College. Students not only shut down the lecture, but they assaulted one of the campus professors. Once again, no significant action was taken against the students and outside agitators. The problem will get worse if there is no deterrence.

Second, professors must get control of their classrooms. Students cannot be allowed to determine what subjects cannot be taught and what topics cannot be discussed. The authors of this book are concerned about the tendency to encourage students to develop extra-thin skins just before they enter

into the real world. Employers aren't going to care too much about their feelings. Students don't have the right not to be offended.

Third, we need to educate this generation about free speech. One poll done by the Brookings Institute discovered that nearly half (44%) of all college students believe that hate speech is NOT protected by the First Amendment. And since many students label just about anything they don't like as hate speech, you can see why we have this behavior on college campuses. More than half (51%) of college students think they have a right to shout down a speaker with whom they disagree. A smaller percentage (19%) of college students think it is acceptable to use violence to prevent a speaker from speaking on campus.

Finally, the adults need to make their voice heard. We pay for public universities through our tax dollars. Parents send their kids off to some of these schools. We should not tolerate the insanity taking place on many college campuses today.

The authors have identified certain concerns that colleges and universities need to address. They remind us how hostile the academic world has become, not only to traditional Christian values, but also to mere common sense. We need to pray for what is taking place in the college environment.

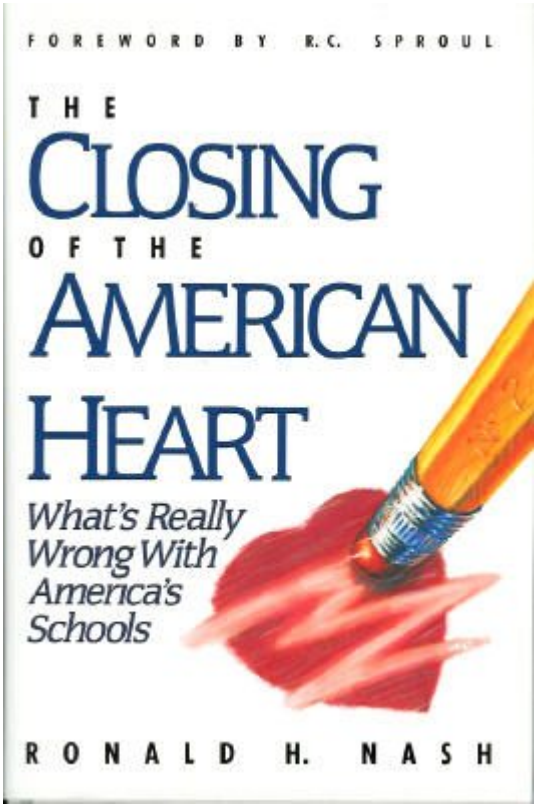
The Closing of the American Heart

Using Ronald Nash's book as a starting point, Don Closson looks at the philosophical foundations of modern education in America and how they have contributed to low performance.

Every once in a while a book is written that shakes things up. *The Closing of the American Mind,* written by the now-deceased University of Chicago professor Allan Bloom in the late 1980s, was just such a book. You can tell that a book strikes a sensitive societal chord when numerous books follow with similar titles. Some experts hated it, others loved it. And it seemed that everyone was talking about it. What made this book so interesting was that it was written for a very small audience of academicians, and yet it attracted the attention of millions and became a bestseller. Even more amazing, it's a book about education.

Dr. Bloom's book reignited a long and important discussion about the content and purpose of education. Here at Probe, we felt that both the book and the topic it discussed were so important that we needed to add to the conversation with a book of our own. The result was a book titled *The Closing of the American Heart*. We asked Dr. Ronald Nash, also now deceased, who taught philosophy at the University of Kentucky, to write it for us. I had the privilege of providing some of the research for the book.



Both books are an attempt to uncover the root causes of the many problems facing our public schools. In this article we will consider the critiques given by the two authors as well as their proposed solutions. One concept that runs throughout both books is that ideas have consequences. Allan Bloom writes that "a serious life means being fully aware of the alternatives,Using Ronald Nash's book as a starting point, Probe's Don Closson looks at the philosophical foundations of modern education in America and how they have contributed to low performance. thinking about them with all the intensity one brings to bear on life-and-death questions, in full recognition that every choice is a great risk with necessary consequences that are hard to bear."{1} This statement relates directly to the educational enterprise. Someone must decide what it means to be an educated person and consequently what students should know and believe when they are graduated from our schools.

Nash argues that this decision—about what it means to be educated—will be based on an educator's worldview. One's worldview is built on answers to life's big questions, answers

that might be informed by traditional religious beliefs or by modern secularism. However, since everyone has a worldview, education can never be neutral regarding the "deep" things of life or life's ultimate concerns. Nash goes one step further by asserting that all public policy is shaped by the ultimate concerns of those holding power in our culture. In other words, worldviews shape institutions and policies, which directly affect how children are educated.

Bloom and Nash agree that one worldview dominates our nation's schools and universities. In what follows we will investigate the nature of that worldview and how these two men believed we should respond to it.

Education's Ills

Allen Bloom's highly influential book *The Closing of the American Mind* begins with the dramatic observation that "There is one thing a professor can be absolutely certain of: almost every student entering the university believes, or says he believes, that truth is relative."{2}

Relativism is the view that truth is unknowable and that universal moral virtues do not exist. Bloom's now famous (or infamous) description of American students rests on his observation that a single way of thinking has come to dominate our campuses. He adds that relativism has left us with only one acknowledged virtue, the virtue of tolerance or openness.

According to Bloom, this assurance that truth does not exist has gutted education and left our students with little desire to seek knowledge. The search for truth has been replaced by an "unsubstantial awareness that there are many cultures." Since cultures have different values, truth must not exist. From this they derive the maxim that we should just get along with one another, and that no values are superior to others or worth defending. Students are left with a gentle egotism and

the desire for comfort. The end result of all this is that books are no longer read as part of a hunger for truth; books have lost their significance.

Nash generally agrees with Bloom, but describes the situation a little differently. His book focuses on three areas of illiteracy among our students: functional illiteracy, cultural illiteracy, and moral illiteracy.

Functional illiteracy is the inability to understand the written word well enough to thrive within our modern culture. The National Assessment of Educational Progress test in 2007 found that thirty-three percent of fourth graders and more than a quarter of eight graders scored below basic levels in reading.{3} What makes this distressing is the fact that per pupil expenditures have more than doubled since 1970 while achievement has remained flat.

The problem isn't just in our primary and secondary schools. Poet and university professor Karl Shapiro writes that "What is really distressing is that this generation cannot and does not read. I am speaking of university students in what are supposed to be our best universities."{4} It's also estimated that 30 million America adults can be considered to be functionally illiterate.{5}

Bloom and Nash argue that the prevailing functional illiteracy and the loss of interest in books is not a chance occurrence. Nash believes that it is the result of a change in the way the West thinks about truth and human nature, as well as the abandonment of a Christian worldview.

Education's Ills cont.

In addition to students who can't read, or functional illiteracy, there are those who can read but are unable to interpret the meaning of the material because they lack the necessary background information. E. D. Hirsch is the best

known author on what has become known as *cultural illiteracy*.

In his book *The Schools We Need*, Hirsch argues that "just as it takes money to make money, it takes knowledge to make knowledge."{6} He contends that those children who begin school with an adequate level of intellectual capital have a framework upon which further learning may be built. But those who lack the necessary educational experiences and sufficient vocabulary tend to fall further and further behind. Not just any information serves as intellectual capital. According to Hirsch, the knowledge taught and learned must be of a type that "constitutes the shared intellectual currency of the society," or put another way, "intellectual capital has to be the widely useful and negotiable coin of the realm."{7}

Nash agrees with Hirsch and charges that modern educational theory deserves much of the blame for causing cultural illiteracy. Hirsch argues that educators often believe that "a child's intellectual and social skills will develop naturally without regard to the specific content of education."{8} Educators are more interested in *how* children learn rather than *what* they learn. Because of this, children fail to store away enough information to become culturally literate.

Some educators will grudgingly admit to the problems of functional and cultural illiteracy, and even assume some of the blame, but they are proud of the decline in what Nash calls *moral illiteracy.* Nash sees the problem of moral illiteracy as a conflict between those who are religious and support traditional values and those who are secular and advocate anti-traditional or modernist values. Those in the midst of the battle understand this conflict, while the typical American often does not.

John Silber, past president of Boston University writes,

> *In generations past, parents were more diligent in passing on their principles and values to their children, and were*

> *assisted by churches and schools which emphasized religious and moral education. In recent years, in contrast, our society has become increasingly secular and the curriculum of the public schools has been denuded of almost all ethical content. As a result universities must confront a student body ignorant of the evidence and arguments that underlie and support many of our traditional moral principles and practices.{9}*

Three Philosophies

Nash describes three distinct philosophical ideas that have resulted in the decline in functional, cultural, and moral literacy in America.

The first of these ideas is *relativism,* which we mentioned earlier. It describes the conviction that there is no such thing as truth. This idea is almost universally accepted among both students and teachers on our campuses. It's often defended with the argument "that might be true for you, but it isn't for me." As Nash points out, this kind of thinking is the result of confusing the veracity of a proposition with one's personal judgment regarding that truth claim. Nash writes, "We may differ in our judgment about what is true, but that does not affect the truth of the matter itself."{10} Relativism itself is making a truth claim about knowledge which is self-defeating. Are we to accept the relativist's statement that there is no truth to be "really true?"

The second idea is *positivism,* an arrogant, quasi-religious devotion to the scientific method. A positivist argues that any belief that cannot be tested by science is irrational. Positivism relegates all of theology and most of ethics to mere opinion or personal preference. However, as philosopher J. P. Moreland has argued, faith in science itself must be defended on a metaphysical basis and cannot be proven

scientifically. “The aims, methodologies, and presuppositions of science cannot be validated by science. One cannot turn to science to justify science any more than one can pull oneself up by his own bootstraps.”{11}

Positivism often turns out to be based on hidden assumptions, assumptions that make up the third idea (or set of ideas) Nash blames the current state of American education on. This third movement has sometimes been labeled the *bootleg religion* of American education; a mixture of secularism, naturalism, and humanism. The assumptions of this faith include (1) the absence of a transcendent God, (2) the non-existence of anything outside of the physical universe, and (3) the acceptance of the self-actualization of each human being—complete autonomy—as the purpose of life. What makes this set of ideas especially dangerous is that they are presented as being neutral and not in violation of separation of church and state sensitivities.

As a result, some educators consider their students mal-adjusted or worse if they hold to a worldview that conflicts with these principles. On some campuses, especially at the university level, the monopoly that these ideas enjoy has resulted in Christian thought being systematically filtered out of the curriculum.

Two Solutions

Allen Bloom makes one major recommendation to combat the relativism that is destroying the desire for knowledge in our schools, he writes:

> *[T]he only serious solution is the one that is almost universally rejected: the good old Great Books approach, in which a liberal education means reading certain generally recognized classic texts, just reading them, letting them dictate what the questions are and the method of approaching*

> *them—not forcing them into categories we make up, not treating them as historical products, but trying to read them as their authors wished them to be read.{12}*

Bloom argues that even when these books are read today they are often viewed through the radical lenses of feminism or Marxism. Everything is deconstructed, every idea is neutralized.

Nash agrees that the Great Books are valuable and contribute to a complete education, but he argues that the array of ideas contained in them will baffle students unless they have an over-arching philosophy to guide them through the maze. Although Bloom acknowledges the necessity for individuals and schools to make the hard choices about the big questions in life, he himself fails to do this in regards to a curriculum. Should teachers treat all of the Great Books equally? Since the authors disagree intensely on basic issues regarding the nature of reality and humanity, are we not promoting a new relativism in place of the old? For instance, do we accept Augustine's *Confessions* and his views on the sinfulness of mankind, or Rousseau's *Confessions,* which assumes that humans are naturally good?

Nash contends that one condition of being an educated person is that he or she develops a single, consistent worldview, something not found in the Great Books. From a Christian perspective, only Christian theism can accomplish the task adequately.

Human beings are never neutral concerning the nature of God, and what people believe to be true about God will ultimately affect their view of education. Although Bloom talks about how modern education has impoverished the souls of today's students, he leaves us without any indication of how those souls should be fed or what connection should be made between knowledge and virtue.

Nash believes that education would greatly benefit from true educational choice. This would empower parents to have their children educated under the worldview assumptions that correspond to their own. Putting more power into parents' hands, thereby increasing local control of education, is one step to re-opening the American heart.

Educational Choice

Don Closson surveys the state of educational choice in America. Even though educational spending is the largest category in every state's budget, money is not our primary concern. It is the well being of our children.

What does the idea of educational choice have to do with a Christian worldview? Quite a lot, actually. As Christians we are called to be concerned about justice, about the poor, about the weakest individuals in our society. We also have an interest in having a population educated well enough to read and understand the Bible. It is about "loving our neighbors as ourselves" and "doing unto the least of these" in the society around us.

I must admit that during my twelve years of teaching and administrating in public schools educational choice wasn't a burning issue. I admit that personal interest convinced me to become a supporter. Vouchers made sense as I experienced the difficulty of paying taxes for local public schools even though my children were being home-schooled or were attending private schools. Back then, supporters of vouchers were either fans of free-market economist Milton Freeman or were philosophically opposed to the "one-best-system" approach of government-provided schooling. They were a small but vocal minority.

Times have changed. Today, supporters of educational choice are often people who are shocked by the failure of our inner city schools to educate children in any meaningful sense of

the word. A rising number of urban leaders have concluded that the current model of schooling just hasn't worked for many of our children.

What is meant by the term "educational choice"? One definition says, "…it means letting every parent send their child to the school of their choice regardless of where they live or income. Parents choose schools based on their child's needs, not their address."{1} The desire for educational choice over the last couple of decades has found expression in the creation of voucher plans, charter schools, private scholarship programs, and personal tax credits or deductions. Since each state is responsible for establishing its own educational policies, there have been multiple variations on each of these categories along with endless court battles to affirm or deny the constitutionality of each plan.

Those who support educational choice begin with the assumption that increased competition is almost always a good thing. Its proponents argue that when schools must compete for students, they generally work harder at providing a better service. They believe in bottom-up reform, letting parents choose what educational methods and content is best for their children rather than a top-down approach that is guided by a centralized government or teachers' union.

In this article we survey the state of educational choice in America. Even though educational spending is the largest category in every state's budget, money is not our primary concern. It is the well being of our children.

Publicly Funded Vouchers

In 1955 economist Milton Friedman argued that America's public school system was not achieving the goals that it was created for. As a government operated monopoly it was failing in its mandate to educate all of our children equally regardless of

race or class. In fact, it was a highly segregated system that was failing our most needy students in our inner city schools. His solution was to open up education to market forces by issuing vouchers to parents who could then choose where to spend their education dollars. He wrote, “In the end, the goal of education is to ensure learning and guarantee a free society and stable democracy. These goals are better met when all parents are free to choose the school that works best for their child.”

For decades, Friedman was a lone voice, but in the early 1990’s Milwaukee Wisconsin began a voucher program with 337 students who could use their publicly funded vouchers to attend religious or non-religious private schools in the city.

This program is now in its 17th year and is approaching its legislatively set cap of 15% of the districts students. In the 2007-08 school year over 18,000 students participated, attending 122 different private schools.{2} Voucher programs have been established in Cleveland Ohio, Colorado, Florida and Washington D.C., only to be met with an onslaught of legal challenges.

In 2002 the Supreme Court ruled that voucher programs are not a violation of the religious establishment clause of the First Amendment. Although that issue has been settled, state courts have whittled away or restricted these programs at every turn. Teachers’ unions have also spent millions of dollars to fight voucher program legislation and to campaign against them in statewide referendums.

It appears that limited voucher programs aimed at poor inner-city students who are trapped in dysfunctional schools now have the best chance of succeeding. While middle-class evangelicals seemed supportive of vouchers early on, they now perceive them to be a threat to the independence of the many private religious schools that have sprung up in the last 20 years. Most middle class suburbanites already have the power

of school choice because of their financial ability to move into districts with better schools.

Tax supported vouchers are still popular among the many free market conservatives who argue that competition in the educational marketplace would be good for children and for the public schools. They have also garnered grass root support from the African-American and Hispanic communities in the last decade. There are other ways to inject choice into our educational system, but it is clear to many that choice is needed now, especially for our most needy students.

Why Educational Choice?

Giving inner city parents a choice in where they send their children to school is critical if we hope to solve the crises in our cities' schools. Secretary of Education Margaret Spellings puts it this way:

> *"Despite our best efforts, there are still vast inequities within our education system. In too many of our cities, the reality faced by minority and low-income kids is shocking. As you've heard, 15% of our high schools produce more than half of our dropouts. Of these dropout factories a majority of the students trapped in them are minorities, and their high school experience looks vastly different from what most kids encounter. They go to schools where trash litters the floors, where graffiti decorates the walls. . . where most freshmen enter unable to read or do math at an eighth grade-level, and where graduation is a 50/50 shot, or worse."*{3}

Why do many reformers believe that educational choice has the greatest potential to solve our nation's education problems? Referring to legislation passed in 2004 that provided the first federally funded choice scholarships for low income students in Washington D.C., Secretary of Education Rod Paige explained that:

> *"Educational choice is important for two reasons. First, it extends civil rights and social justice. Second, it enhances school effectiveness. The introduction of opportunity scholarships in the District comes fifty years after the Brown v. Board of Education decision. It comes 40 years after Dr. Martin Luther King, Jr. demanded a full measure of the American promise. Opportunity scholarships help remove the chains of bureaucracy. They free low-income students to obtain a better education in a school of their choosing."{4}*

Studies have shown how dramatic changes can occur in cities that allow its parents choice. Writing about the longest voucher program in the nation, the *Wall Street Journal* declares:

> *"There's no question the program has been a boon to the city's underprivileged. A 2004 study of high school graduation rates by Jay Greene of the Manhattan Institute found that students using vouchers to attend Milwaukee's private schools had a graduation rate of 64%, versus 36% for their public school counterparts. Harvard's Caroline Hoxby has shown that Milwaukee public schools have raised their standards in the wake of voucher competition."{5}*

Educational choice works because it puts power into the hands of the people who care most about our nation's children, their parents. It works because it increases the autonomy of school administrators so that they can provide the kind of education that the public wants. It works because it encourages learning communities of like-minded adults to work together to provide the best learning environment possible.

Private Vouchers and Tax Credits

Although the press has focused on the legal battles surrounding the use of tax-supported educational vouchers to pay tuition at private religious schools, there is another

type of voucher program that is helping thousands of children and continues to grow without legal controversy. There are now more than two dozen *private* voucher programs in cities across the United States. Millions of dollars are being raised by private citizens in order to offer vouchers to less fortunate children so that they can attend better schools.

In that late 1990's, John Walton of Wal-Mart fame, and Theodore Forstmann of Forstmann Little & Company decided to offer 1,000 scholarships to low income students in Washington D.C. With very little publicity they received over 8,000 applications. Sensing a real need, in 1998 they together donated $100 million towards a national program that would fund 40,000 scholarships inaugurating the Children's Scholarship Fund.{6} That got people's attention. Former U.N. Ambassador Andrew Young, Martin Luther King III, General Colin Powell, and numerous C.E.O.'s from some of America's best known corporations have served on the organization's board.

By September of 1998 the fund grew to $170 million. Eventually, the Children's Scholarship Fund received applications from 1.25 million children from 22,000 cities and towns in all fifty states.

Mr. Forstmann concluded that:

> *The parents of 1.25 million children put an end to the debate over whether low-income families want choice in education: They passionately, desperately, unequivocally do. Now it is up to the defenders of the status quo to tell them, and the millions they represent, why they cannot have it.{7}*

In 2007, the Children's Scholarship Fund gave vouchers to 29,000 students. The families receiving these scholarships earned an average of around $27,000 a year, and supplemented the scholarship with an additional $2,000 per student. These low income families have a strong desire to remove their children from their current schools and are willing to make a

significant sacrifice to acquire a good education for their children.

State-sponsored tax credits are another alternative to tax-funded vouchers. They are popular because of they are simple to administrate; they have a relatively long history and a settled legal status. They have limited scope because not all states have an income tax and often it is the families who need help the most who do not benefit from tax credits because of their low tax liability.

Advocates of educational choice agree that it will take many different tactics to provide the freedom parents need to get the best education possible for their children.

Educational Freedom

In 2001, the Manhattan Institute released an interesting study concerning the idea of educational freedom. The study suggested a strong relationship between the amount of freedom a state gives parents in directing their children to a school of their choice and the level of academic achievement accomplished by those children.

Since education is primarily governed at the state level, it makes sense to measure educational freedom by state. In the study, a state’s ranking is determined by how much freedom parents are given by its laws regulating vouchers, charter schools, home-schooling, choice within existing public schools, and tax credits allowed for education expenses.

According to the study, the most educationally free state is Arizona. It gets the top spot because of its wide selection of charter schools and its tax credits for private school expenses. The least educationally free state is Hawaii. Hawaii scores lowest on the index because it has one large school district for the entire state, no charter schools, and it highly regulates home-schoolers. Utah is second to last

because gives no assistance to those sending their children to private schools, has few charter schools, and has large centralized school districts.

The study concludes that "For many years education reformers have advocated strengthening accountability systems and expanding educational freedom. Our statistical models suggest that such reforms, where implemented, have yielded the academic improvements that reformers predicted."{8} For instance, a one-point increase in a state's freedom index would predict a 4% increase in that state's math test results indicated by the National Assessment of Educational Progress.

Educational freedom received another boost in a study released in October 2007 by the Milton & Rose Friedman Foundation. The research concludes that "A large body of top-quality studies consistently shows that school choice produces higher academic achievement for the students who have the opportunity to use it. On this issue, the evidence supporting school choice is as strong as the evidence on any social policy question whatsoever."{9}

Freedom makes a difference in education. Jay Greene of the Manhattan Institute writes, "Simply providing families with additional options in the education of their children has a larger independent effect on student achievement than increasing education spending or reducing class size… the magnitude of the benefit of education freedom for student learning is comparable to the benefit of significantly increasing median household income."{10}

Christians are called upon to love their neighbors, and their neighbors' children, as themselves. If we are serious about helping our underprivileged neighbors, especially in our inner-cities schools, educational freedom through greater choice is a policy we can and should endorse.

Gay Agenda in Schools – A Christian Worldview Perspective

Kerby Anderson summarizes the efforts currently underway to implement a gay agenda in our public schools, identifying some of the negative consequences. Looking at this initiative from a biblical worldview perspective, he suggests actions that Christians should take in response to these actions.

Advancing the Gay Agenda in Schools

Since the early 1990s gay activists and various homosexual groups have been using strategies that provide them with greater access to public schools. Usually the focus is upon making the schools a safer place for gay, lesbian, bisexual, transgender, and transsexual students, thereby justifying the introduction of topics and speakers on the subject of homosexuality. And the establishment of homosexual clubs on campus provides an ongoing program to continue to introduce homosexuality to students on campus.

Two key organizations are the Gay Lesbian and Straight Education Network (GLSEN) and Parents, Families, and Friends of Lesbians and Gays (PFLAG). Both have been helpful in establishing a foothold for homosexual speakers, programs, and curricula.

Perhaps the most effective wedge used by gay activists to open the door to the public schools has been concern over student safety. Kevin Jennings. Executive Director for GLSEN, explained in a speech how the "safety" issue was a most effective strategy:

> *In Massachusetts, the effective reframing of this issue was the key to the success of the Governor's Commission on Gay and Lesbian Youth. We immediately seized upon the opponent's calling card—safety—and explained how homophobia represents a threat to students' safety by creating a climate where violence, name-calling, health problems, and suicide are common. Titling our report "Making Schools Safe for Gay and Lesbian Youth," we automatically threw our opponents onto the defensive and stole their best line of attack. This framing short-circuited their arguments and left them back-pedaling from day one.{1}*

The strategy has obviously been successful because no one

would want to be against making the schools a safer environment. It almost doesn't matter whether the allegations are true. Once you raise the concern of safety, most administrators, teachers, and parents quickly fall in line.

There is an irony in all of this. Many of the behaviors that are taught and affirmed in these school programs and clubs are unsafe in term of public health. For example, *Pediatrics* (Journal of the American Academy of Pediatrics) reported on a Harvard study that found more than thirty risks positively associated with self-reported gay-lesbian-bisexual (GLB) orientation.{2} So it is indeed ironic that the idea of "safety" is often used as means to introduce teaching and discussion of behaviors that have been proven to be quite "unsafe."

The Goals of GLSEN

The mission statement of GLSEN is straightforward: "The Gay, Lesbian & Straight Education Network strives to assure that each member of every school community is valued and respected regardless of sexual orientation or gender identity/expression."{3} It is a growing, well-funded homosexual organization that promotes homosexual identity and behavior on campus. It has been very successful in gaining access on campus by working with such influential groups as the National Education Association.

Anyone who takes the time to read some of the materials recommended by GLSEN will quickly find that it condones sexual themes and information that would be disturbing to most parents. One researcher who has taken the time to review these materials and investigate various school programs came to the following seven conclusions:{4}

1. GLSEN believes the early sexualization of children can be beneficial. This means that virtually any sexual activity as

well as exposure to graphic sexual images and material, is not just permissible but good for children, as part of the process of discovering their sexuality.

2. “Coming out” (calling oneself or believing oneself to be homosexual) and even beginning homosexual sex practices at a young age, is a normal and positive experience for youth which should be encouraged by teachers and parents, according to GLSEN.

3. Bisexuality, “fluid” sexuality and sexual experimentation is encouraged by GLSEN as a right for all students.

4. Meeting other “gay” and “questioning” youth, sometimes without parental knowledge, is a frequent theme in GLSEN materials. At these meetings, minors will come into contact with college-age people and adults practicing homosexuality.

5. In GLSEN material, the “cool” adults—parents, teachers and counselors—are those who encourage students to embrace homosexuality and cross-dressing. They also allow adult-level freedoms and let children associate with questionable teens or adults.

6. GLSEN resources contain many hostile, one-sided anti-Christian vignettes and opinions, as well as false information about Christianity and the Bible’s position on homosexuality. This encourages antagonism against biblical morality and increases the risk that youth will experiment with high-risk behavior.

7. The spirituality presented positively in GLSEN resources is heavily laced with occult themes and nightmarish images.

Goals of PFLAG and Gay Clubs

PFLAG is a national organization of parents, families, and friends that “promotes the health and well-being of gay,

lesbian, bisexual and transgender persons."{5} It has been an active organization at the local level to promote its views of human sexuality into schools, churches, and various youth organizations. Although there is a strong emphasis on rights and tolerance, their message about sexuality would be disturbing to most parents.

One researcher who has taken the time to review their brochures and other materials came to the following five conclusions:{6}

1. PFLAG believes in total sexual license for people of all ages. For children, this means that virtually any sexual activity, as well as exposure to graphic sexual images and material, is not just permissible but good for children as part of the process of discovering their sexuality.

2. "Coming out" (calling oneself homosexual or cross-dressing) at a very young age, and even beginning early homosexual sex practices, is a desirable goal in the world according to PFLAG.

3. Bisexuality, fluid sexuality, and sexual experimentation is encouraged by PFLAG. The group believes it's important for all students to learn about these options.

4. Meeting with other "gay" and "questioning" youth, usually without parental knowledge, is a frequent theme in PFLAG materials. At these community meetings, thirteen-year-olds will come into contact with college-age youth and adults practicing homosexuality.

5. PFLAG spreads false information about the Bible, religious faith, and restoration of heterosexuality through faith. This misinformation closes the door of change for many young people, and stirs up anti-Christian and anti-Jewish bias and hostility.

Another way the gay agenda is promoted in the public schools

is through Gay-Straight Alliance clubs. In the mid-1990s, there were a few dozen Gay-Straight Alliance (GSA) clubs in U.S. high schools. Today there are 3,200 GSA clubs registered.{7}

These student-run clubs provides a meeting place for student talk about homosexuality and homosexual behaviors. It is also provides a platform for outside speakers to address various topics and for students to organize a "Pride Week" on campus. Once a year, many of the students in these clubs also participate in "The Day of Silence." This is a day when students will remain silent all day as a way of acknowledging the silence induced by those who oppose homosexuality.

Legal Liability

Is there any legal liability when schools permit and even promote the teaching of homosexual education the campus? One group (Citizens for Community Values) believes there is a potential liability. The group has published a manual documenting the potential liability that schools, administrators, and teachers might face. The following is a brief summary of much more information that can be found in the document "The Legal Liability Associated with Homosexual Education in Public Schools."{8}

Life expectancy—The *International Journal of Epidemiology* found that gay and bisexual men involved in homosexual behavior cut off years from their lives. One study showed that "life expectancy at age 20 years for gay and bisexual men is 8 to 20 years less than for all men." They therefore concluded that if "the same pattern of mortality were to continue, we estimate that nearly half of gay and bisexual men currently aged 20 years will not reach their 65th birthday."{9}

Sexually transmitted diseases—The danger of various STDs, including HIV infection in homosexual relationships, has been

well documented through many studies. The Medical Institute for Sexual Health says that "Homosexual men are at significantly increased risk of HIV/AIDS, hepatitis, anal cancer, gonorrhea and gastrointestinal infections as a result of their sexual practices. Women who have sex with women are at significantly increased risk of bacterial vaginosis, breast cancer and ovarian cancer than are heterosexual women."{10}

Other health risk behaviors—A study by Harvard University of over four thousand ninth- to twelfth-grade students found that gay-lesbian-bisexual "youth report disproportionate risk for a variety of health risk and problem behaviors" and they found that they "engage in twice the mean number of risk behaviors as did the overall population."{11}

Mental health—A study published in the *Archives of General Psychiatry* found those engaging in homosexual behavior have a much higher incidence of mental health problems. "The findings support the assumption that people with same-sex sexual behavior are at greater risk for psychiatric disorders."{12}

Permitting and promoting homosexual activity through on-campus programs and clubs will certainly increase homosexual behavior among students. Administrators, teachers, and parents should reconsider the impact these programs, and the subsequent behavior, will have on the student body.

Biblical Response

When we talk about the issue of homosexuality, it is important to keep two biblical principles in tension. On the one hand we must stay true to our biblical convictions, and on the other hand we should reach out with biblical compassion. Essentially this is the balance between truth and love.

On the one hand, it is crucial for us to understand how the homosexual agenda threatens to normalize and even promote homosexuality within the schools. Moreover, gay activists are

pushing an agenda in the courts, the legislature, the schools, and the court of public opinion that will ultimately threaten biblical authority and many of our personal and religious freedoms. Christians, therefore, must stand for truth.

I have provided a brief overview of the groups and programs that are promoting the gay agenda in the public schools. I encourage you to find out what is happening in your community. We have also documented the potential legal liability associated with many of the behaviors that are encouraged by these programs. Often administrators and teachers are unaware of the potential dangers associated with homosexual education in the schools. Take time to share this information with them.

On the other hand, it is also important for us to reach out to those caught in the midst of homosexuality and offer God's grace and redemption. We cannot let the hardened rhetoric of gay activists keep us from having Christ's heart toward homosexuals. As individuals and as the church, we should reach out to those caught in the sin of homosexuality and offer them hope and point them to Jesus Christ so that they will find freedom from the sexual sin that binds their lives.

It is important to remember that many in the homosexual lifestyle are there because of some emotional brokenness in their families. They may be trying to meet their emotional needs in ungodly ways. Youth in the public schools may be experimenting sexually and find themselves caught up in the homosexual lifestyle.

It is also important to remember that change is possible. The testimony of hundreds of former homosexuals is proof that someone can change their sexual behavior. So are the various studies that document these same behavioral changes. And, most importantly, the Bible teaches that change in possible. Paul, writing to former homosexuals in the Corinthian church, noted that "such were some of you" (1 Corinthians 6:11).

In addressing the issue of the gay agenda in public schools, it is crucial to stay true to our biblical convictions (and stand for truth) while we also reach out with biblical compassion.

Taking Religion Seriously

Religious Neutrality and Our Schools

The last century has seen a purging of both religious influence and information from our classrooms. For many, this seems only natural and proper. They would argue that the Supreme Court has determined that government schools must be neutral regarding religion. Since the landmark Everson v. Board of Education case in 1947, the law of the land has been that "Neither a state nor the Federal government can set up a church. Neither can pass laws which aid one religion, aid all religions, or prefer one religion over another."{1} However, writing for the majority, Justice Hugo Black added that the state must be neutral in matters of religion in two specific ways. First, it must be neutral among the different religions, but it must also be neutral in how it treats religious belief and non-belief.{2}

This question of neutrality is at the heart of my thoughts in this article. We are investigating whether or not our schools are taking religion seriously; at least seriously enough to be considered neutral in the sense of Supreme Court decisions. Excluding the topic of religion from our schools is not neutrality; it violates the second sense of neutrality given by Justice Black. And if our schools are not neutral regarding religion, they are privileging those who claim to have no religion. We will argue that this kind of education is actually a form of indoctrination into a secular perspective, or what is often called the worldview of naturalism.

There is an additional reason to ask the question, are schools taking religion seriously enough? It can be argued that

without sufficient information regarding religion a person cannot be said to be truly educated. Religious ideas and perspectives permeate art and literature. Without knowledge of Christianity and the Bible, students will miss the meaning of key ideas embedded in both stories and pictures. They will only have a secular framework of interpretation for understanding literature and art.

Religion is also a crucial variable for understanding international affairs. Current relations between nations and between culture groups are often incomprehensible unless one understands the religious imperatives driving the people within them. To know little or nothing about the various religions of the world leaves one with a skewed view of why things happen and what might occur next.

Does religion still matter? To answer this question, we will look at the current state of teaching on religion in our schools and address possible changes that might need to be made. Finally, we will consider questions and concerns that arise if our proposed changes were implemented.

Religion Still Matters

Religion still matters in our society, at least enough to make it an important topic in our schools. Numerous surveys indicate that the vast majority of Americans still claim belief in God. Only about 5% of Americans label themselves atheist or agnostic. Another 10% to 15% either refuse to answer the question or are indifferent to the topic; this leaves between 85% and 90% who still claim belief in a God of some kind.{3} Belief is also high among our well educated; a 2006 Gallop poll found that 77% of those with a postgraduate degree have little doubt that God exists.{4}

A large majority of us claim that the Bible is the inspired Word of God (77%), that there is a heaven (63%), and that

religion is very important in their lives (57%).{5} Close to 80% of Americans still identify with a specific religious tradition, and 40% claim to attend religious services weekly. In 2005 they gave $93.2 billion to religious organizations.

By any measure, America remains far more religious than its European neighbors. In his book *Does God Make a Difference?,* Warren Nord documents the considerable difference between our two cultures. According to a 2005 survey, only 52% of Europeans claim belief in God, although 27% believe in some sort of spirit or life force. Eighteen percent are atheist or agnostic. In a number of European countries fewer than 10% of the people attend church weekly.{6}

The rest of the world is closer to the U.S. than to Europe in its beliefs. About 85% identify with a religious tradition and there has been rapid recent growth in evangelical Protestantism in the Third World. Although it has been popular in recent years for academics to promote the thesis that the world is going through rapid secularization, it now appears that Europe is not necessarily the model for the future. That said, there does appear to be a trend in both the U.S. and Europe towards claiming to be spiritual "apart from churches, dogma and tradition."{7}

So what does this mean? It tells us that a large majority of people in this country interpret reality through a religious lens. Whether it's economics, ethics, science or art, many Americans continue to make sense of their world and make important decisions based on their religious faith.

The twentieth century experienced a relentless assault on religion from governments (Russia and its satellites and China) and ideologies (Marxism, psychoanalytic theory, existentialism), but considering its continued influence in the U.S. and the rest of the world, it still seems prudent to teach our students about it.

Religion Removed

According to Warren Nord, students in American schools and universities learn very little about God and religion. His book reflects his study of national academic standards and high school textbooks in our public schools for history, economics, and science. Let's look at his results for history.

Information on religion makes up only about 10% of the *world* history standards and less than 5% of the *American* history standards.{8} History textbooks tend to do somewhat better, but Dr. Nord's conclusion is that both fall dramatically short of what should be included. To begin with, not enough material is presented for students to actually make sense of any particular religion, and most of what is found predates the seventeenth century. The topic of religion simply disappears after that. Information about the twentieth century tends to show religion in an unfavorable manner, often connecting it to violence and warfare.

Another deficiency is the tendency to freeze theological thinking in the past by neglecting to show how religious traditions have responded to modernity. The rise of influential theologians, religious movements, or the science-faith dialogue of the last hundred years are missing. When religious topics are covered in the material they are viewed through a secular framework or lens. Thinking about history through a religious lens is never considered. For instance, most texts mention that our dating system is dependent on Jesus Christ's birth date, but they fail to say why. None of them include Christianity's claim that Jesus was God incarnate.

Finally, all students are to learn eleven long-term patterns in world history. Not surprisingly, none of the patterns are religious ones. Unfortunately, the other academic fields fare even worse. For instance, the National Science Education Standards contains no discussion of the relationship of

science and religion in its 262 pages.

How about religion in our universities? Nord estimates that "about 10 percent of undergraduates in public universities take a course in which religious ways of making sense of the world are taken seriously."{9} He goes on to write that "for the great majority of American students in secondary schools and universities, less than 1 percent of the content of their education will deal with religion."{10}

As a result he concludes that, "They will not be taught that God doesn't exist, but they will inevitably learn to interpret whatever they study in secular categories."{11} He adds that textbooks, the official curriculum, and the governing purposes of public education have become almost completely secular.

Real Education

Dr. Nord, who taught philosophy of religion and education at the University of North Carolina–Chapel Hill, makes his case with a completely secular argument. Let's start with his statement of the problem and then look at some of the specifics. Dr. Nord writes, "Public education leaves students religiously illiterate, it falls far short of religious neutrality, and it borders on secular indoctrination (if only unintended)." He adds that "schools and universities teach students to accept secular ways of making sense of the world as a matter of faith."{12}

Nord comes to this conclusion as part of his discovery that we no longer provide students with what has traditionally been called a liberal education. The word "liberal" here is not used in a political sense but rather as a label for a set of generally agreed upon educational goals. He argues that an essential aspect of a liberal education "requires that students be initiated into an ongoing discussion about how to make sense of the world—one in which religious voices must be

included as live options."

According to Dr. Nord there are four critical dimensions to a liberal education. First, education must be broad rather than narrow or highly specialized. Too narrow of a focus tends to end up more like indoctrination than like an education. Students need to consider alternate ways of interpreting the world if they are to be able to think critically about the problems that face us. Next, in order to understand different cultures and traditions students must have the opportunity to get inside them. In other words, they must hear arguments for a given position from people who actually believe them, not through a filter that merely reinforces our society's current biases.

Another component of a liberal education is that it deals with things that really matter, issues that go to the core of one's worldview. It should consider questions like, what is ultimate reality, what is our nature as human beings, and how does one know right from wrong?

Finally, all of this should be introduced to students in the form of a conversation about making sense of contending points of view. Our current form of instruction is mostly a series of narrowly focused monologues with little attempt to tie them together to other courses much less other cultures and traditions. It removes much of the conflict inherent in the discussion.

Nord argues that theology should be at the core of this conversation. The university should be a place where students are introduced to conflict, the most fundamental being moral and theological.

Concerns and Suggestions

Nord sums up his concern this way: "Education is now deeply biased against religion. Indeed, it is unconstitutional."{13}

When it is suggested that we take steps to remediate this situation, a number of concerns come to mind. The poor preparation of most teachers to handle the subject is most apparent. Often teachers are unaware of both their freedoms to teach the subject as well as legal limitations regarding how that teaching is carried out. This can be overcome by proper training.

Some have argued that religion is not intellectually respectable enough to warrant a place in the curriculum. Psychologist Steven Pinker argued against adding a "Faith and Reason" component to Harvard's curriculum, writing that religion "is an American anachronism in an era in which the rest of the West is moving beyond it."{14} This kind of thinking reflects what is sometimes called the secularization thesis that has come under much criticism of late. In fact, a good argument can be made that religion is actually becoming more important in much of the world.

Pinker and others argue that the need to understand religion has been replaced by the overwhelming need to think scientifically. In their view, the Enlightenment and modern science have settled the case against considering a religious perspective of reality. However, this is not totally accurate. As Nord writes, "[U]niversities don't impose scientific standards of respectability on philosophy, ethics, politics, literature, or art." He adds, "What must be avoided is granting modern science the authority to define what is reasonable and respectable across the curriculum."{15}

So what can we do about the current bias against knowledge of religions in our schools? In his book *Does God Make a Difference?* Warren Nord argues that every high school student and undergraduate should be required to take a year-long course in religious studies. Preferably, this would consist of one semester on the Bible and another on world religions. He would also require that all classes dealing with topics impacted by religious thought such as ethics, politics,

philosophy, and art commit 5% of textbook space and class time to understanding the conflicts caused by different religious worldviews. Each perspective should be taught as a live option and represented by writings from people who actually believe in it.

The goal of these classes cannot be to indoctrinate or proselytize, but they could help to challenge the current monopoly that materialistic naturalism has on our curriculum.

Is Public School to Blame?

June 30, 2011

I was having a conversation recently about the reason so many students turn away from the church after high school, and it was suggested that it's because they don't get the proper biblical worldview/foundation in public school and only get an hour during the week at church.

It seems to me this is a big generalization since public school students can get a strong foundation in the home and Christian school and home school students don't necessarily get a good foundation (or it is a skewed perspective that actually turns them away from the church).

So I started thinking about the data that has been collected on this and wondered when the information is gathered and compiled if it takes into account what kind of schooling the student had – public, private Christian or homeschool. My guess is that the data wouldn't be significantly different if you did divide the three groups.

Also, does it make a difference if they go to a public college or a Christian college? I would hope that students who go to a Christian college are more likely to continue going to church and to have a more biblical worldview, but is that true?

Good question. Actually, studies show parents are the most influential in regard to the beliefs of young adults. So you're right, school really has little to do with it. As a kid who went to public school and loved it, I'm actually quite offended by this very unfair, very common stereotype about public school. Truth be told, public school forced me to know what I believed and why in a way a Christian environment couldn't have.

You're also right that going to a Christian college can be

really helpful, but it depends on the college/university, and it depends on the person. I know going to a Christ-centered university where integration of faith (worldview) and learning was important was super-helpful for me. However, if I had gone to a public university, I know I would have been involved in a local church and a campus ministry; studies also show that such involvement significantly lowers the risk of faith abandonment during the college years. Community is key.

All that to say, public school, private school, home school… it doesn't really matter. When we grown-ups complain about the worldview issues of young adults, we really have no one but ourselves to blame because in both the home and the church, young people are watching how we walk the talk.

Hail the Conquering Graduates!

June 10, 2009

I was asked to put together a few resources for the high school grads at church. I thought I'd share the wealth with the World Wide Web.

Below you'll find helpful and hopefully meaningful resources to guide you as you embark on adulthood. I especially recommend the two blogs. The most valuable resource of all, though, is people. Get involved in your own way on campus and in a local church. But don't just hang out with people your own age—that'll make you boring. Be sure to introduce yourself

to your professors and tell them thank you (will likely turn that B+ into an A). I've been teaching and learning from college students for a really long time. So I know quite a bit about college stuff; and a decent amount about life stuff too—you can always ask me anything. The whole world is before you; but you never have to face it, with all its joys and hardships, alone.

Many congratulations and blessings.

Here you'll find really good tips for getting the most out of the really (sometimes really, really) expensive education you're getting. Classroom lectures, writing assignments, and even exams can be a lot different in college than they were in high school. The tips on this website can help make the transition smoother.

Biblos.com

Biblos.com is this great website I've only recently discovered. It's a one-stop-shop for all your bible study tools including concordances, commentaries, maps, pictures, devotions, and of course the Bible itself in several different translations and languages.

EveryStudent.com

I'm really pumped about this website. It's a place where no question about God or life is out of bounds. When your friends have questions about God and Christianity, or when you have questions yourself, this website can help. In college you'll do a lot of exploring, discovering, and learning about yourself: what you think about God, Christianity, the way the world is, the way it should be. This website is designed to

guide you on that journey. Be sure to check out Life Issues, which touches on topics such as sex, beauty, racism, and shame.

Probe.org

Curious about Genesis and evolution? Need help answering the tough questions your friends have about Christianity? Whether you want to learn more about your friend's religion, are struggling with questions like – Why do bad things happen to good people? – or you need a credible source for the paper you're writing, Probe.org is an excellent resource that can help you think through some really tough topics.

Blogs

Living Spirituality

Living Spirituality offers helpful, encouraging, and even sometimes convicting devotionals. It also provides a weekly discussion about real life stuff. These discussions are helpful as we try to live like Jesus in our everyday lives.

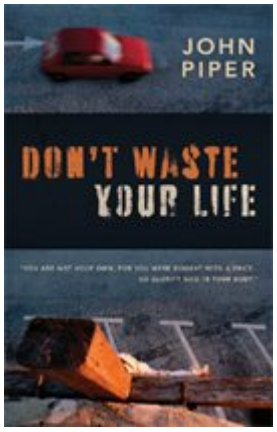
Surviving College Life

Surviving College Life is a really cool blog that's incredibly comprehensive. Not only will it be helpful as you prepare to arrive on campus. This will be something you'll find useful throughout your college years as you move from dorms to apartments, friendships to romances, and from major to major. The above link is a list of all the posts divided by topic. So whether you're looking for time management tips, study aids, roommate advice, financial aid resources, or fitness facts, *Surviving College Life* can help give you a heads up and point you in a good direction.

Book Buzz

"Do not conform any longer to the pattern of this world, but be transformed by the renewing of your mind." Romans 12:2

This brief list of books includes stuff I read in college that was really important to my Christian walk, as well as a few books I wish I had read in college. They're books I hope you will find helpful as you journey with Jesus and strive to think christianly. (Don't worry; they're not just "smart people" books. Most of these are very easy to read.)

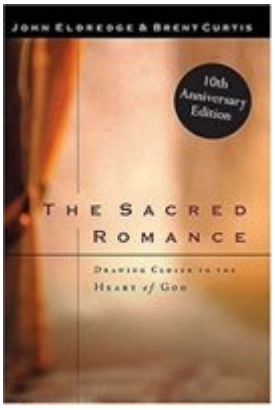


Don't Waste Your Life

—John Piper

When Christ gave us real life, he gave our lives meaning and purpose. *Don't Waste Your Life* is about living on purpose a life passionate for God and people.

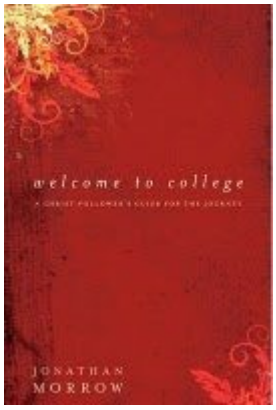
The Sacred Romance: Drawing Closer to the Heart of God



—Brent Curtis & John Eldredge

This is not a girly book; don't let the title fool you. The Sacred Romance was a really important book for me when I was in college. It helped me understand the big picture of the Bible: the story of God and the story of my own life. It

helped me understand the difference between living by the rules and living spiritually.

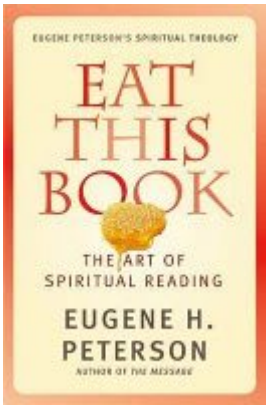


Welcome to College: A Christ-follower's Guide for the Journey

–Jonathan Morrow

Welcome to College includes chapters on the problem of evil and suffering, Christology, ethics and much more. You will also find a broad collection of practical topics: health, sex and dating, finances, Internet use, alcohol. This book provides unique and much–needed help for navigating the head–spinning newness of college life.

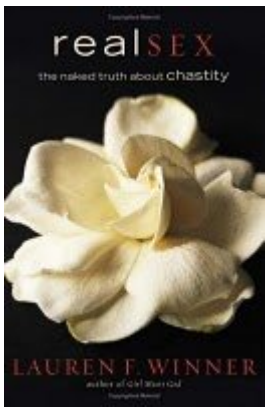
Eat This Book: The Art of Spiritual Reading



–Eugene Peterson

This is a really helpful book about how to read and interpret and understand the Bible, how to let the Scriptures nourish

and feed us, how to live the Scriptures as they are the Living Words of God.

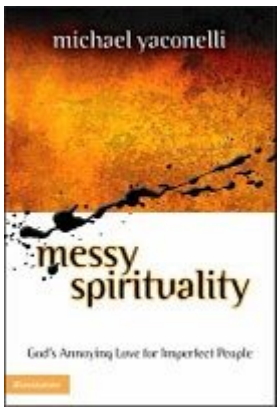


Real Sex: The Naked Truth about Chastity

–Lauren F. Winner

Winner talks about sex in a realistic way. She sorts through the confusing messages we hear about sex from both the world and the church, and helps us think about sex and romantic love within the big picture of God's story. Real Sex provides biblical and practical guidance for unmarried Christians who desire to honor God with their sexuality and dating relationships.

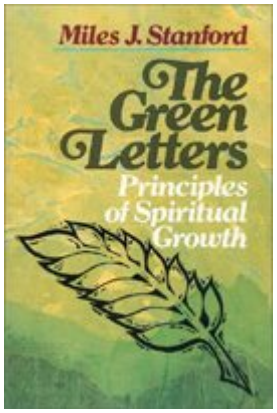
Messy Spirituality: God's Annoying Love for Imperfect People



– Mike Yaconelli

This small book says big things about what being a Christian looks like. It reminds us that we're all human in need of

God’s grace; that there’s no such thing as the ideal Christian—there’s no one-size-fits-all pattern of spirituality.

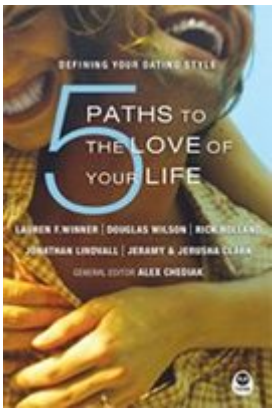


The Green Letters

—Miles J. Stanford

The Green Letters is about spiritual growth. It’s one of those books you can pick and choose what you want to read by scanning over the Table of Contents; that is, the chapters don’t necessarily have to be read in order. This book will challenge you to live less selfishly, or we could say, less as a self-follower and more as a Christ-follower.

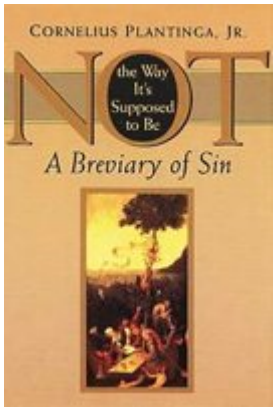
5 Paths to the Love of Your Life: Defining Your Dating Style



—Alex Chediak

There are basically five different approaches to romantic love

from the Christian perspective. This book gives you an overview of these five views, their advantages and disadvantages, and the logic and Scripture behind them. So you can decide for yourself which path you relate to most, which enables you to be intentional about biblical, christianly romance.



Not the Way It's Supposed to Be: A Breviary of Sin

—Cornelius Plantinga Jr.

What is sin? What are the effects of sin? How do we think and talk about sin (if at all)? How do we deal with sin? These are some of the questions discussed in this small, but impactful book on sin. You'd think a book all about sin would be depressing, but Plantinga understands that sin is only the distortion of something originally good; and that though things aren't the way they're supposed to be now, they will be one day soon when Christ returns.

American Education: The Hundred Years War

On its surface, the process of educating our children appears to be fairly straightforward. First, you must determine what kind of person you want to produce at the end of their formal schooling. In other words, decide what it means to be an educated person. Then, you establish what knowledge and attitudes will accomplish this goal. Next, hire an administrator who has the ability to pull together all the necessary components; someone who knows the best, scientifically verified, teaching techniques and the best optimum environment for implementation. Finally, give the principal or headmaster the authority to hire gifted teachers who can successfully do the job or to fire teachers who cannot. There's only one problem with this simple formula: educators disagree on how to complete every one of these steps. To make matters worse, education is one of the most expensive responsibilities that our government fulfills.

In the last forty years, spending in the U.S. on K–12 education has more than doubled. In 1970 it was $221 billion; by 2008 it rose to $556 billion in constant dollars.{1} During that forty year period, enrollment has changed very little, rising from about fifty–one million to fifty–three million students. So essentially, spending today is twice the amount we spent in 1970 on about the same number of students. Naturally, one would expect to see significant gains in learning for that money. However according to the National Assessment of Educational Progress Scores, not much has changed. For the last forty years scores have remained flat. Reading scores for seventeen–year–olds have remained at 285 out of 500, and mathematics scores went from 300 to 306, a minor improvement.{2}

Many argue that the reason we are not making progress in our

schools is that we are using the wrong playbook. Because our educational leaders have bought into a philosophy of education based on a faulty view of human nature, they have endorsed techniques in the classroom that have marginal impact at best. This situation has not gone on without being contested. Historians of education point to a struggle going back to the beginning of the twentieth century between two factions that have very different ideas about what it means to be human and what the goal of education should be. Most Americans would be surprised to learn that there has been a century–long struggle between two distinct ways of thinking about how to educate our children.

In what follows we will look at the opposing worldviews of these two education camps and consider how their struggles have impacted our children. Join us as we look at the effect of what might be called the Hundred Years War in American education.

Progressive Orthodoxy

Education historian Diane Ravitch argues that at the end of the nineteenth century, America was facing two possible educational paths. One path led to an academic curriculum consisting of history, literature, science and mathematics, language, and the arts for all high school students. The other path endorsed a vocational emphasis for most, and an academic training only for a few.

Criticism of the academic curriculum came from pragmatic business leaders and faculty members of our newly formed colleges of education that had recently sprung up across the nation. These so–called “progressive” educators felt that schools should be focused on the needs of society and students rather than centered on the traditional content of an academic curriculum. This emphasis on making school more practical and student–centered reflects the thoughts and writings of Jean

Jacques Rousseau. Rousseau is considered by many to be one of the most influential thinkers on educational philosophy in Western culture. His book *Emile*, written in 1762, offered an extremely child–centered educational method in response to the traditional content–focused curriculum of the day.

Rousseau's educational methods sprung from his faith in a particular worldview. One critical aspect of this worldview is that Rousseau believed that humans are "good" and that they naturally worship their Creator.{3} He also argued that all we need to know about God can be learned from nature; any other source, including the Bible, would be seeking man's opinion and authority which always turns out to be destructive. Rousseau thanked God for making him free, good, and happy like God himself.{4} Regarding education, it's not surprising that Rousseau valued freedom above all else. He wrote, "The truly free man wants only what he can do and does what he pleases. That is my fundamental maxim. It need only be applied to childhood for the rules of education to flow from it."{5}

The result of Rousseau's worldview is predictable. The child, rather than his teacher, knows best how to learn and what to learn. This student–centered approach leads Rousseau to a strong opinion about books and reading. He brags that, "At twelve, Emile will hardly know what a book is." He adds, "I hate books, they only teach one to talk about what one does not know."{6} His Emile will learn from life itself but only when the need for such learning comes from within.

For Rousseau, *natural man* is always superior to *civil man* and love of oneself is always good. This focus on freedom and student centered learning would influence educators for centuries and would find a warm reception in the minds of American educators in the progressive education movement.

Rousseau’s Disciples

It’s ironic that the most prestigious college of education in America, Teachers College at Columbia University, began as the Kitchen Garden Association in 1880 with the goal of training young girls to work as cooks and housemaids. Later, carpentry was added to attract boys and, as a result, the name was changed to the Industrial Education Association. In 1887 it was renamed the New York College for the Training of Teachers, and five years later just Teachers College. The opening of Teachers College marked the birth of the progressive education movement in America.

If Teachers College was the birthplace of progressive education, John Dewey was its father. Dewey was probably the most influential of all American philosophers and had an immense effect on how we think about education as a nation. He saw schools as a tool for social reform, and the goal of this reform was to replace Christianity with a new secular religion of democracy. To accomplish this goal, schools should turn from the traditional curriculum that encouraged abstract thinking and handing down the best ideas of Western Civilization, and instead base their activities on the needs and experiences of children in the home and community. Children should study problems and processes that mean something to them. Shop work, sewing, and cooking were a greater need than ancient languages, mathematics, history, or theology. As a result, books were downplayed and projects centering on vocational training become the mainstay of many public schools.

While Dewey saw the value of maintaining some of the traditional academic content, some of his disciples worked to have it removed completely. William Heard Kilpatrick took the mantle of leadership for the progressive education movement from Dewey as an immensely popular professor at Teachers College. His 1925 book *Foundations of Method* described an

educational philosophy that, to this day, still controls much of American education. It argued that we should simply teach children—to be child—centered, not subject—centered—because knowledge is changing so quickly and today's subjects will be of no use tomorrow. It celebrated whole—language over phonics and critical thinking over rote learning, tests, and even report cards. His first opportunity to design an experimental class resulted in no set curriculum, no assigned reading, math or spelling work, and no tests.

Augustine and the Academic Tradition

For the last hundred years, the progressive education movement has promoted a child—centered curriculum as a necessary remedy against a dying books—and—content—centered form of schooling. This old order was often referred to as a "liberal education" or possibly the "academic tradition." Which worldview undergirds this academic tradition in schooling?

Progressives and traditionalists have very different views of human nature. Rousseau and the progressives argue that humans are created happy, free, and good while traditionalists see things more like the fourth century Christian Augustine of Hippo. Augustine believed that all humans are born with a sin nature and a tendency to do evil. There is a famous passage in his *Confessions* in which he describes an incident in his youth where he and his friends stole and destroyed fruit from a nearby orchard because, as he writes, "I became evil for no reason. The only motive I had for this wickedness was the wickedness itself. It was disgusting, but I loved it."{7}

Augustine believed that wisdom did not come from within our fallen natures, but came from God and knowledge of his word. He argued that "we should be led by the fear of God to seek the knowledge of His will . . . it is necessary to have our hearts subdued by piety, and not run in the face of Holy Scripture."{8} While Augustine depended on God as a source for

wisdom, he acknowledged that teachers need to use good methods if they are going to shape the minds and hearts of their students. He asked the rhetorical question, Should the wicked "tell their falsehoods briefly, clearly and plausibly, while the latter [believers] tell the truth in such a way that it is tedious to listen to, hard to understand, and . . . not easy to believe it?"{9}

Augustine and those who followed in his tradition down though the centuries believed that children must be trained in the beliefs and disciplines that made for a civilized society. Not just any information or content would do. A truly educated person would receive a foundation of theological training that would inform all the other disciplines. The first universities in the eleventh and twelfth centuries continued to see theology as the queen of the sciences. Although theology was still center stage through the Renaissance and the Reformation, it was removed from its throne during the Enlightenment in the seventeenth and eighteenth centuries.

The progressive education movement's efforts to reduce the influence of Christianity on schooling in America have been successful. During the 1960s and 70s the Supreme Court issued ruling after ruling that resulted in the secularization of our public schools. Parents would have to look elsewhere to have their children instructed in a Christian environment.

Why Does This Matter?

Even the progressive education leader John Dewey understood the need to transmit the best of one's culture to the next generation through the process of education. He wrote, "Unless pains are taken to see that genuine and thorough transmission takes place, the most civilized group will relapse into barbarism and then into savagery."{10} Dewey and his disciples planned to use this transmission process to change our culture dramatically.

Dewey's goal was to change the worldview upon which educational philosophy in America was grounded. He was convinced that the only intellectually responsible philosophy was a naturalistic one. This meant that education, ethics, politics, and life itself should be devoid of any hope in, or influence from, supernatural beliefs. As a result, he worked to replace America's faith in Christianity with faith in democracy, which he referred to as a religious belief. Revelation and religious authority would be replaced with the scientific method and this new faith in democracy.

Dewey was instrumental in breaking the connection to our past as a society. His followers took his lead, offering an even more radical break from the academic tradition. For instance William Heard Kilpatrick, a mathematician, argued that mathematics is "harmful" for ordinary living, and that dancing, dramatics, and doll playing offered more potential for educational growth.{11}

At the end of WWII, progressive ideology reigned supreme in American education. But even though the battle over educational philosophy had been won, its implementation would constantly be challenged. The Russian satellite Sputnik in the 1950s caused a temporary panic and a short lived re–emphasis on science and mathematics. But by then, the enrollment in science had already declined precipitously. For instance, fewer than five percent of high school students took physics in 1955, down from nearly twenty percent in 1900.{12}

By the late sixties, only the lucky few who scored well on IQ tests received an academic high school curriculum, and our universities had begun to give in to student demands for relevancy by gutting the required curriculum and adding less challenging, highly politicized programs like women's studies, Black studies, and peace studies. To some, it appeared as if adult supervision had disappeared from our university campuses.

In recent decades, parents have resorted to homeschooling and private schools in search of rigorous academics for their children. Others have pushed for charter schools and voucher programs to re–inject greater rigor in the public schools. But it appears that the hundred years war over educational philosophy will continue well into the future.

Welcome to College: Great

Worldview Gift for Graduates

The world is changing so quickly it's hard to keep up. Christians who take the Scriptures seriously as a guide for life and knowing God usually agree that we're sliding down a very slippery slope morally and spiritually. Non–biblical worldviews not only abound but gain star status. Christ–followers can easily feel overwhelmed, wondering how to make a difference. Nowhere is this cultural decay more manifest than on college campuses.

For years, my wife and I have seized the small window of opportunity of choosing a gift for a college–bound graduate. We realize this represents one good chance to help shape a still–moldable life and, by extension, potentially touch the culture for Christ. 'Tis the season of graduation right now and I invite you to consider following suit.

Our habit is to give college–bound graduates J. Budiszewski's excellent *How to Stay Christian in College: An Interactive Guide to Keeping the Faith*. I recently discovered a book by a new graduate that I'm adding to our graduation gift bag. It's a helpful–older–brother styled "guide for the journey" by a young man who has obviously been trained by some of the sharpest minds in contemporary Christian worldview thinking and apologetics.

If Probe ever hired someone to write an organizational brochure, it might be Jonathan Morrow. His book, *Welcome to College: A Christ-Follower's Guide for the Journey*, contains one of the most succinct rationales for what we do–*Christian apologetics*, that is, a defense of the faith–of anything I've read. Morrow's gift for profound insight coupled with brevity is keen. He shows a sweeping knowledge, yet he includes just enough material for busy students. "I have tried to keep the chapters short and sweet since this won't be the only thing you'll be reading this semester," Morrow writes.

Morrow's experience as a recent college graduate and his unself-conscious approach should resonate with younger readers. I would have wanted to write this book when my street credibility with young readers was potentially higher, but I was nowhere near his level of maturity, awareness or comprehension in my 20s!

Of course, some would say Morrow's work is simply a *Cliff's Notes* version of all he's been taught at Biola University, Talbot School of Theology, and through apparent involvement with Campus Crusade for Christ. There is little or no truly original thinking here, perhaps. So be it.

Sure, this material is generally sprinkled throughout any well–read Christians' bookshelves, expounded profusely by the authors Morrow draws upon. But that's the genius of his book for today's graduate: a young yet well–schooled voice covering the gamut of worldview *and* personal life issues in brief, accessible terms.

The young man or woman being pummeled by secular professors–many of whose worldviews and intentions are in direct opposition to their Christian faith–need help *now*. This book makes that possible.

Welcome to College isn't filled with abstractions about controversial Bible passages or archaeological discoveries, interesting as that might be. Again, one strength of *Welcome to College* is its scope. Mixed in with the basic faith–defending ammunition like the problem of evil and suffering, Christology, ethics and so on, students will find a broad collection of pragmatic topics: health, sex and dating, finances, Internet use, alcohol, even a chapter on dealing with the death of a loved one. This provides unique and much–needed help for navigating the head–spinning new freedoms of college life.

Not content to simply write a how–to–get–by manual, Morrow

challenges students to consider the privilege of a college education and "spend it 'Christianly'." He discusses questions like:

- *How can you discover what you are supposed to do with your life?*
- *How do you share your faith in a hostile environment?*
- *How do you manage your time so that you can study and have fun?*
- *Is all truth relative?*
- *Are there good reasons to be a Christian?*
- *How should you think about dating and sex as a Christian?{1}*

Since the book offers in its beginning chapters a treatment of three major worldviews, I could have been reading one of our Probe *Student Mind Games* graduates. One of the first sessions in Probe's basic student curriculum contains a session on *theism, naturalism* (with a sub–section on *postmodernism*), and *pantheism*. Morrow uses a nearly identical breakdown of worldviews: *scientific naturalism, postmodernism* and *Christian theism.*

As Morrow directly points out, these three systems of thought predominate at the root level for people of all cultures. You base your beliefs on one or more of these, knowingly or not. Great similarity between a new book and a worldview apologetics curriculum like Probe's may be unsurprising. How many variations on basic themes could there be? Yet it is striking as a compact manifesto for what Morrow, his alma mater, Probe, and a growing host of authors and organizations are seeking to do, which is to *help people think biblically*.

The fundamental importance of another theme appears, as it should, in the book's opening pages as well. College kids need to enter post–secondary classrooms with eyes wide open, being aware that the world at large (and academia in particular)

scoffs at the idea of religion as possessing absolute, universal truth. Nancy Pearcey's treatment of what she calls the *fact / value split* in contemporary culture has become a go–to concept of culturally aware apologetics.{2} It also informs Morrow's book. This "two-realm theory of truth" places religious claims into an upper story of noncognitive, nonrational values. They supposedly offer the individual some personal meaning but hold no truth–telling power over anything or for anyone else. "True for you but not for me" is the slogan. This "upstairs" portion of life is just opinions–private, personal preferences not fit for the public sphere.

In contrast, the supposed lower story is made up of rational, verifiable, scientific claims that are binding on everyone. This is not opinion; it's truth by gosh. On this view, the only possible source of real knowledge is verifiable science. One professor in New York told his class that anyone who believed in the supernatural was "an idiot." That's why such war stories involving unwitting Christian students getting broadsided by scoffing professors abound. Academic authorities simply pronounce knowledge unattainable outside of the scientific method.

But understanding the anatomy of this view and its faulty presuppositions equips believing students to challenge prevailing campus biases. Though Morrow offers only a passing understanding, any student interested in pursuing further help will find direction here.

One example of Morrow's agility with big, tough ideas is this statement rounding out his brief discussion of one major worldview: "Postmodernism is a fundamental redefinition of truth, language and reality." Elsewhere he writes:

> *If the Christian worldview best answers the most profound of human questions (e.g., where we came from, who we are, how we should live, why the world is such a mess, and what our*

> *ultimate destiny is, to name a few) then it is true for more than just two hours on a Sunday morning.*[3]

That's just good writing!

Given its forty–two chapters, I only sampled the book. But that's in keeping with the reality of any busy, overwhelmed new (or not so new) college reader. Its usefulness lies partially in its accessibility as a reference. If questions arise in class or due to new life experiences, undergrads (others, too) can crack the book and get a quick, cogent, biblical viewpoint on it.

Chapter titles like "Ladies: Pursue the Real Beauty" may pull readers in before felt needs drive them there. Many others like "Discovering the Will of God," "Ethics in a Brave New World" or "Science Rules!" lend themselves to future thumbing on an as–needed basis. The *Big Ideas* chapter summations will serve as a useful preview, refresher, and set of talking points for young faith–defenders.

One surprising thought I had while reading the chapter entitled "Getting Theological: Knowing and Loving God" was its value as an evangelistic tool. If I met an average inquirer or skeptic who is unaware of the unified biblical *metanarrative* (big story) of Christianity–asking, *What is it you Christians really believe?*–I'd hand them *Welcome to College* bookmarked here. Morrow gives the doctrinal summary of the story, anyway. Here once again, clarity and brevity meets with completeness and orthodoxy.

Kudos to Morrow and his editors, not to mention all the fine teachers whose wisdom permeates the pages: Dallas Willard and William Lane Craig, Craig Hazen and Nancy Pearcey and many others. Simply refer to the endnotes and Further Reading sections at each chapters' end for a collection of apologetics resources for the ages.

And don’t forget to consider adding this book to your gift list for graduates and students at all levels. You may help a young person to understand Morrow’s charge that:

> *God has already defined reality; it is our job to respond thoughtfully and engage it appropriately. Don’t buy into the lie that you need to keep your Christian faith to yourself. It is personal, but not private. As a college student you have the opportunity to establish the biblical habit of living an integrated life for God’s glory. In other words, think Christianly![{4}]*

A President’s Educational Choice

An Important Choice

With each presidential election Americans are called to reflect upon public policy, ranging from military funding to education reform. Once the new president is chosen, everyone

looks for evidence that he will move the federal bureaucracy in a direction favorable to their own agenda.

When it comes to education, President Obama has been difficult to figure out. In early speeches he seemed to favor dramatic reform. During the campaign he said:

> *We need a new vision for a 21st century education – one where we aren't just supporting existing schools, but spurring innovation; where we're not just investing more money, but demanding more reform; where parents take responsibility for their children's success; where our schools and government are accountable for results; where we're recruiting, retaining, and rewarding an army of new teachers, and students are excited to learn because they're attending schools of the future; and where we expect all our children not only to graduate high school, but to graduate college and get a good paying job.{1}*

Later, Obama appeared to move closer to those who already hold sway over how our schools operate, especially the teachers unions. An indication of this trend was the sound of relief voiced by Marty Hittelman, president of the California Federation of Teachers, who said, "It's such a clear change from what we've had. . . . Someone who's friendly to labor. . . . Someone who wants to work with teachers."{2} Obama has also signaled encouragement to the unions by appointing a teacher-friendly Stanford University professor to lead his education transition team.

But sometimes personal action speaks louder than political appointments. Our new president has decided to send his two children, Malia Anne and Natasha, to a well known private school in Washington, D.C. The Obama children will attend Sidwell Friends School, a private Quaker affiliated school that charges $29,000 a year per student. Some are criticizing the Obama family for not supporting the local public schools.

As a supporter of educational freedom, and choice, I personally have no problem with the president choosing the best educational setting for his children. I would do the same.

What interests me is what this choice says about President Obama's thoughts regarding educational excellence. Sidwell Friends School violates key principles that the teachers unions and other public school supporters tell us are necessary elements for excellent schools, programs and policies that reformers insist taxpayers should be providing for every student in America.

Ensuring an adequate education for all of our children is a matter of justice that Christians should be concerned about. In what follows I will look at these so-called educational necessities the teachers unions and other public school supporters demand.

What Sidwell Needs

President Obama's decision to place his daughters in Sidwell reveals something about what he thinks it takes to provide a superior education. Choosing this expensive private school raises interesting questions about President Obama's support of what might be called the "common wisdom" that public school leaders and teachers unions tell us is necessary for good schools.

Much of the following was brought to my attention by Mike Antonucci who writes a monthly newsletter for those who are concerned about education in America and particularly the role that the unions play in shaping it. Antonucci points out six areas in which the Sidwell School might be seen as deficient by our leading reformers and especially by the teachers unions.

According to the National Education Association, the largest

teachers union in the country, the first deficiency at Sidwell is obvious. On its web site the NEA argues that "the attainment and exercise of collective bargaining rights are essential to the promotion of education employee and student needs in society."{3} In other words, the school simply must be unionized. How can Sidwell School hope to effectively educate students without a collective bargaining agreement? It boggles the mind to think that they can educate President Obama's children without such necessities as union agency fees, binding arbitration, grievance procedures, and most important, teachers strikes!

How can real education occur in the absence of an angry battle between a well financed teachers union and a harried entrenched school administration? Can real learning happen in the absence of endless hours of negotiations over every aspect of the curriculum, the daily schedule, and teacher placement? Doesn't the president know that a hostile, confrontational working environment actually improves the educational process?

In addition to this remarkable neglect, the Sidwell School forces its teachers to pay between ten and forty percent of their health care insurance premiums, contribute towards their own retirement plan, and almost unbelievably receive only two personal days off per school year. Barbaric! Everyone knows that teachers are only concerned about compensation and benefits and if they do not receive an amount above the median level paid out by other schools of similar size, they simply can't function. These teachers are obviously being coerced to remain at this school. And to think that some have suggested that the opportunity to work with motivated students and supportive parents in building a strong learning community might be more important than financial rewards.

More Problems with Sidwell

A key ingredient missing from the Sidwell experience will be

an appropriate level of diversity. To many, diversity has become the ultimate good in education. Millions upon millions of taxpayer dollars have been spent to create highly diverse student bodies across the nation. Without a high level of diversity, it's argued, students will not develop the necessary degree of tolerance, both for people and ideas, needed for our society to prosper or even exist into the future. A diversity deficit might result in the president's children coming to the frightening conclusion that truth itself isn't diverse and that perhaps we should not accept all ideas equally.

Although the Sidwell School has a significant level of diversity – thirty-nine percent of the students are part of an ethnic or racial minority group – Washington D. C. public schools are ninety-five percent ethnic and racial minorities. How can the president send his children to a learning environment that is so far behind the level of essential diversity prominent in our capitol's public schools? If some diversity is good, isn't more diversity better?

However, this deficit of diversity pales in comparison to the next problem. The Sidwell School is a Quaker institution. It has mandatory weekly worship meetings for all its students, including the president's children. This practice goes far beyond the legitimate academic objective of learning the history of religious traditions; it requires students to participate in a religious activity.

The official National Education Association's Web site makes it clear that "encouraging or compelling students to participate in any religious activity, such as prayer, during any type of holiday festivity or classroom activity is forbidden."{4} Now, if such activity is harmful to our public school students, does it make sense to expose the president's children to them?

The NEA adds that while students may study various religious

expressions and practices, they may do so “as long as schools make sure different faiths are represented in school-wide or classroom activities.”{5} Does Sidwell promote Islamic or Wiccan worship? Is our president setting a good example by allowing his children to be taught in such an intolerant setting?

Sidwell’s Curriculum

Here’s another problem. It appears that Sidwell is kind of old fashioned when it comes to its curriculum. Its Web site says, “We believe that to be effective, education must be founded on secure mastery of basic skills . . . We place strong emphasis on reading, personal expression of ideas through speaking and writing, and the mastery of computational and problem solving skills. We also encourage scientific exploration, artistic creativity, physical activity, second language acquisition.”{6} Basic skills? Mastery learning? Isn’t this a throwback to the education of the nineteenth century?

In the middle school, Sidwell’s history curriculum says that “Each history course is designed to provide students with a sound foundation of knowledge in a given subject area and to develop research, writing and interpretive skills.”{7} To many modern educators, this focus on acquiring information and developing mastery of essential skills is reminiscent of educational policies that have been out of vogue for decades.

Professional educators tend to endorse something called the Progressive Education Movement. This movement emphasized a “naturalistic,” “project-oriented,” “hands-on,” “critical-thinking” curriculum and “democratic” education policies endorsed by the philosopher John Dewey.{8} Beginning early in the twentieth century, educators challenged the emphasis on subject matter and have attempted to replace it with what might be called the “tool” metaphor for learning.

The “tool” metaphor argues that students’ minds shouldn’t be filled with lots of facts, but instead should be taught how to learn. Although various arguments are used to promote this view, the one most often heard goes something like this: “Since knowledge is growing so quickly – in fact it’s exploding – we need to teach kids how to learn, not a bunch of facts that will quickly become outdated.” Education historian Lawrence Cremin writes that our elementary schools have been dominated by this metaphor since the 1960s, and that our secondary schools are not far behind.{9} The result of this monopoly has been a reduction of what might be called “intellectual capital,” an agreed upon set of necessary facts that all well educated people should possess.

The Sidwell School seems to believe that this so called intellectual capital is important. By stressing the acquisition of key information in its curriculum it is revealing a more traditional rather than progressive education. Can this antiquated curriculum possibly prepare the Obama children for the rapid changes of the twenty-first century?

Educational Excellence

It seems, then, that the Sidwell Friends School chosen by the Obama family for their daughters violates many of what is considered to be the “best practices” in the public school sector.

On the other hand, it represents many of the factors that we know make for a superior learning environment. Almost twenty years ago the Brookings Institution published a book that made a powerful argument regarding what makes for an effective school and what doesn’t.{10} The author’s conclusions were really not that surprising. In a nutshell they found that bureaucracy kills, and if public schools are anything they are bureaucratic. In fact, the study argued that private schools

are usually more effective simply because they have greater autonomy than public schools.

Exercising this autonomy begins with an educational leader. The role of a private school headmaster is often quite different from the public school equivalent, the principal. The headmaster has much more autonomy in fashioning the educational vision for his school as well as the authority for executing it. This includes shaping the curriculum and hiring and firing teachers based on their effectiveness and support for the school's program. In the end, private school leaders have much greater power to fashion the kind of educational community they envision than do public school administrators.

Private school leaders also enjoy the freedom to create a disciplined environment necessary for learning to occur. Because parents have freely chosen a private school for their children to attend, they have already bought into the way the school chooses to structure its students' time and how it deals with distractions to learning. Parents of private school children tend to be much more supportive of the school's teachers and administrators as a result. This is not to say that private schools always get it right when establishing a disciplined learning environment, but parents always have the option of pulling out if they become disenchanted with the program. This educational choice both empowers private schools and encourages change as well. Parents vote for the programs that work and take their funds elsewhere when they feel the school is not a good fit for their children. Successful schools are rewarded; others are encouraged to change.

Private schools succeed when the headmaster, teachers, parents, and children have worked together to create a learning community. As simple as this sounds, it can be life changing for the students involved. Even students from our most challenging urban environments have benefitted from schools that have been freed from their bureaucratic straitjackets. If we hope to impact our most needy students in

this country, we will do so by encouraging policies that increase the autonomy of school leaders and empower parents by giving them the kind of educational choice that President Obama enjoyed when deciding to send his children to the Sidwell Friends School.
