

The Culture of Disbelief

A new book, *The Culture of Disbelief* by Stephen Carter, may be the catalyst to open up a much needed discussion on the role of religious belief in public life. It has even caught the attention of President Clinton. The author teaches law at Yale University, is an Episcopalian, an African-American, and to a great degree an iconoclast, a nonconformist whose ideas will please neither the right nor the left, the liberal nor the conservative. But, just as it took a Nixon, with his irrefutably conservative credentials, to open the door to better relations with communist China, it may be necessary for a Stephen Carter to help bring back into balance the role of religion in America.

This book is provocative, in an irksome, irritating, vexing way, but also in an alluring, insightful way. Carter's defense of religiously motivated actions in the public square (in government, education, and the marketplace, or wherever people conduct public business) is worth cheering about. Carter argues that our government has trivialized serious religious belief to the point that we are losing the protection once provided by the First Amendment, which was written, according to Carter, to protect religious groups from government interference, not to protect the non-religious from the religious in our society.

The vexing part of Carter's book is his consistent rejection of conservative biblical positions. He argues vehemently for the right of others to hold them, but then declares these positions to be naive, developed by shoddy thinkers, and just plain wrong. His complete confidence in his position, often without stating why, will be very irritating to readers who hold to biblical inerrancy and a biblical worldview.

With that warning said, this is still an important book for anyone interested in the role of religious belief in America.

Carter rightfully points out that the Constitution and First Amendment were written for a world in which regulation was expected to be rare and would almost never impinge on religious liberty. Today, we live in a highly regulated welfare state, one which sees no limits to its regulatory powers. There is literally no place to hide for those who are religious and try to act in a way consistent with those beliefs.

Professor Carter makes a powerful argument that governmental agencies are removing religion as an “ground for objection” to its various mandates, whether they be sex education in the schools or housing anti-discrimination laws. In other words, the beliefs or disbeliefs of those running our government are being imposed on Christians via the power of the ever expanding ruling bureaucracy.

Carter responds to this governmental encroachment into the intimate details of our lives by calling those on both sides of the ideological debates to value, not oppose, those who refuse to accede to the authority of others, for it yields the diversity that America needs. His lucid arguments for true religious freedom, especially from his political and religious position, are helpful and well thought out. Carter is willing to speak boldly against the tyranny of secular government, especially when governmental agencies become oppressive.

Again, let me be very clear. This book will be difficult to read for many believers. Professor Carter bends over backwards to make his message palatable to the more politically correct crowd on our college campuses and in government. On the other hand, conservative Christians can benefit from a close reading of this book. If this book has a significant impact, our government could return to (in regard to religious freedoms) a position much closer to that of our Founding Fathers.

God as a Hobby

The most powerful message of *The Culture of Disbelief* is that religion has been trivialized in America. By religion, professor Carter is referring to any worshipping group that believes in a supernatural God and that actually makes demands on its members, in this life, based on its beliefs about the nature and character of God. He notes that "More and more, our culture seems to take the position that believing deeply in the tenets of one's faith represents a kind of mystical irrationality, something that thoughtful, public-spirited American citizens would do better to avoid. If you must worship your God, the lesson runs, at least have the courtesy to disbelieve in the power of prayer; if you must observe your sabbath, have the good sense to understand that it ...is just like any other day of the week." According to Mr. Carter, this development is both unfortunate and dangerous to our religious freedoms in America.

This bias has encouraged some of our public institutions to accept religious prejudice as neutrality. The public schools are one of the more obvious illustrations of this bias. One recent example involves a Colorado public school teacher who was told by superiors to remove his Bible from his desk where students might see it. He was told not to read it, even silently, when students were present. He was also ordered to remove books on Christianity from his classroom library, even though books on Native American religious traditions and the occult were allowed to remain. According to Carter, "The consistent message of modern American society is that whenever the demands of one's religion conflict with what one has to do to get ahead, one is expected to ignore the religious demands and act...well...rationally."

Another example of this bias towards religious faith in general is found in modern America's phobia about those who attempt societal change as a result of religious beliefs. An

anti-abortion protestor that is against abortion for religious reasons will conjure up grim pictures of religious wars, inquisitions, and other assorted religious atrocities as examples of people trying to impose their religious will on other people. It is like saying that if those murdered for religious reasons had somehow had a choice, they would have chosen a secular killer: "that those whose writings led to their executions under, say, Stalin, thanked their lucky stars at the last instant of their lives that Communism was at least godless."

Professor Carter's response to liberal America's religious bigotry is to remind them that the civil rights movement "was openly and unashamedly religious in its appeals as it worked to impose its moral vision" on America. One can also remember a time when getting out the evangelical vote for a Democratic Presidential candidate was considered a good thing by many in the press. Jimmy Carter's campaign was never charged with advocating a narrow sectarianism, as was Ronald Reagan's or George Bush's, because his religious sentiments promoted policies that were more in line with the liberal mindset.

Professor Carter recognizes that much of society's current intolerance of those who are religious focuses on those who advocate a conservative set of values that arise from the belief that God has communicated via the Bible truth about human nature and righteous living, truth that is not available to us via reason alone. Mr. Carter disagrees with the conservative view but sees danger in using the power of government to remove the political freedoms of those who hold to it.

Separation of Church and State

In this important book the author makes some interesting observations concerning church and state in America. For example, Carter believes that, "Simply put, the metaphorical separation of church and state originated in an effort to

protect religion from the state, not the state from religion." As Thomas Jefferson declared, religious liberty is "the most inalienable and sacred of all human rights." The First Amendment was written to provide the maximum freedom of religion possible. Philip Schaff once called it "the Magna Carta of religious freedom," and "the first example in history of a government deliberately depriving itself of all legislative control over religion."

How have these founding ideas about church and state been applied recently in our society? Not very well according to Mr. Carter. The Supreme Court, whose duty it is to interpret the Constitution, has arrived at something called the Lemon test, an appropriate name because it is nearly impossible to apply. It includes three criteria for a statute to satisfy the requirements of the First Amendment. First, the law must have a secular purpose; second, it must neither advance nor inhibit religion; and finally, it must not cause excessive state entanglement with religion.

It is apparent to many that this ruling by the Court works in favor of those trying to build an impenetrable wall between religious belief and our government. Professor Carter notes that if this ruling is taken seriously one would have to question the legality of religiously motivated civil rights legislation. Another question is whether or not one can act in a manner that neither advances nor inhibits religion? For instance, does the government advance religion if it grants tax relief to parents who send their children to private schools? If so, does denying the tax relief inhibit religion by causing parents to be taxed twice for their children's education?

Carter notes that even the Court has had difficulty in applying this set of standards, mainly because of the way it has defined what is meant by a secular purpose. The Court often focuses on the motivation for a piece of legislation, rather than its political purpose. In other words, the

criteria that many would like the Court to use in determining secular purpose would be to ask if the legislation is pursuing a legitimate goal of government or not, rather than inquiring into the religious motivation of the bill's sponsors. As Professor Carter writes, "The idea that religious motivation renders a statute suspect was never anything but a tortured and unsatisfactory reading of the [establishment] clause... What the religion clauses of the First Amendment were designed to do was not to remove religious values from the arena of public debate, but to keep them there."

Mr. Carter understands the difficulty and complexity of law and notes that simply removing the Lemon test would not solve our legal inequities regarding religious belief in America. The legal community is very much split over what should replace the test. Yet he argues that we must not give in to the current notion that the Establishment Clause of the First Amendment was written to protect the secular from the religious for this would lead to establishing "religion as a hobby, trivial and unimportant for serious people, not to be mentioned in serious discourse. And nothing could be further from the constitutional, historical, or philosophical truth."

The Accommodation of Religion

Although Professor Carter does not agree with positions held by conservative evangelicals on moral issues, he argues eloquently, not only for our right to hold these positions, but to take part in the public debate over them and, if possible, to convince our fellow citizens of the rightness of our policies.

Mr. Carter sees the current culture war as a result of a collision between the ever expanding welfare state and religious autonomy. In its attempt to enforce gender, racial, and sexual preference equity, the government was bound to clash with the discriminatory practices that are part of religious belief. This, in itself, is a remarkable admission

from someone who generally agrees with the policies of the current welfare state. Fortunately, Professor Carter values freedom of religion and fears secular governmental tyranny enough to prefer that we err on the side of freedom rather than government control.

How then should the courts rule when religious groups balk at compliance to government established policies like anti-housing discrimination laws? Recent court cases have tended to ignore the significance of religious belief. Carter, however, contends that religious groups ought to be able to establish when and how they are called to discriminate in public settings, with some limitations. He would place a high standard, that of compelling interest, between government policy and religious observance. In other words, government should not be able to force a Christian couple to rent their apartment to two homosexual men unless the it can prove that it has a compelling interest in the issue. Doing so under the standard Carter proposes would be much more difficult than under current standards. Yet without this high standard, or something similar, government will continue to virtually ignore religious faith in creating its rules and regulations.

Professor Carter is very cognizant of the power government has to control or destroy groups via taxation, regulation, or the threat of secular leveling. That occurs when government tries to force every organization to reflect current government policy within its own internal organizational structure and practice. Unfortunately, Mr. Carter's plan for implementing protection of religious groups is not as satisfying as his defense of religious freedoms. In fact, he comes to the conclusion that satisfying both equality and religious autonomy may not be possible. In one obvious example, that of homosexual employment rights versus the rights of religious groups not to hire homosexuals, Carter's rejection of biblical constraints on homosexual behavior leaves him without direction. Even so, conservative readers will want to note his

fine defense of religiously motivated actions in society.

Carter believes that it is difficult “to see how the law can protect religious freedom in the welfare state if it does not offer exemptions and special protection for religious devotion.” Unfortunately, he never questions the wisdom of the welfare state in general. However, he does see the need for autonomous religious groups that challenge the moral and political orthodoxies of the day, whether they be religiously motivated civil rights groups in the 50s and 60s or anti-abortion groups in the 90s. Government neutrality is a myth, and without religious freedom whatever orthodoxy currently exists in government might be sustained via coercion and intimidation if religious groups are not given sufficient power to act as mediating structures.

Professor Carter’s book is an important one merely because it takes religious belief seriously even though it is sometimes inconsistent and strident in its treatment of conservative evangelicals. Next we will look at another model that some feel is a more biblical approach to the problem of unconstrained government and at what might replace the notion of a welfare state.

Another Model

Although written from a liberal perspective, both politically and theologically, the book argues very effectively for a return to a form of religious freedom that better reflects our Founding Fathers’ thinking. Once the reader gets past the author’s general disregard for what he calls the “Christian Right,” a great deal of helpful material can be garnered for the support of a society which respects religious belief and allows those who are religious full participation in the public affairs of the nation. In light of recent attacks on the role of Christians in politics by the media, this defense by a Yale law professor couldn’t come at a more opportune time.

Professor Carter charges that unless secular liberal theory finds a way to include religious participation in the public moral debate, political disaster may be the result. The outcome will be a narrowly focused elitist theory of government and public life that would indeed inflame the current culture war and drive a greater wedge between those who are religious and those who are not.

Conservative evangelicals should applaud Mr. Carter's view of religious freedom. His emphasis on religious groups acting as mediating structures between the individual and government and on the rights of families to direct the education of their children are a much needed message for our society. All societies need to determine the distribution of power and authority among its citizens. Many supporting the current welfare state argue that government and individuals should possess the bulk of decision-making ability in our political and judicial framework. This leaves out mediating structures, such as the church, which serves the vital role of challenging both political tyranny and individual anarchy. Professor Carter rightly sees the danger in this position. If authority is focused on state power and individual rights, the state will eventually extinguish the voices of individuals it finds antagonistic to its plans.

Mr. Carter is closer to a Calvinistic view of society than the welfare state model many liberals find comforting. Professor Carter seems to endorse the concept of spheres of influence, the idea that government, the church, and the family all have legitimate, in fact, God-given, authority in their respective domains.

Romans 13 and 1 Timothy 2 declare that God's purpose for government is to maintain order by punishing the wrongdoer and thus create a peaceful society in which we might live in all godliness and holiness. Ephesians 5, 1 Timothy 3, as well as other passages, lay out the structure and importance of the family in God's plan for human society. The origin and purpose

of the Church is referred to throughout the New Testament. First Timothy 3:15 talks of God's household, which is the church of the living God, the pillar and foundation of the truth. Those with a high view of Scripture believe that God has ordained these structures within society for good reason. If any of these three spheres try to function outside of its God-given role, the society will suffer as a whole.

The value of Professor Carter's book is that he is warning society that it has placed far too much authority and power in the hands of our government at the expense of religious groups and families. This is an important message that counters the often held belief that government is the only agent in our culture that can bring about change.

Outcome Based Education

Outcome Based Education

Times are changing. The pressure on our public schools to improve, and change, has become intense. Since 1960 our population has increased by 41%, spending on education has increased by 225% (in constant 1990 dollars), but SAT scores have fallen by 8% (or 80 points). Although few would argue that the schools are solely to blame for our children's declining academic performance, many are hoping that schools can turn this trend around.

The decade of the 80s brought numerous education reforms, but few of them were a dramatic shift from what has gone on

before. Outcome-based education (OBE) is one of those that is new, even revolutionary, and is now being promoted as the panacea for America's educational woes. This reform has been driven by educators in response to demands for greater accountability by taxpayers and as a vehicle for breaking with traditional ideas about how we teach our children. If implemented, this approach to curriculum development could change our schools more than any other reform proposal in the last thirty years.

The focus of past and present curriculum has been on content, on the knowledge to be acquired by each student. Our language, literature, history, customs, traditions, and morals, often called Western civilization, dominated the learning process through secondary school. If students learned the information and performed well on tests and assignments, they received credit for the course and moved on to the next class. The point here is that the curriculum centered on the content to be learned; its purpose was to produce academically competent students. The daily schedule in a school was organized around the content. Each hour was devoted to a given topic; some students responded well to the instruction, and some did not.

Outcome-based education will change the focus of schools from the content to the student. According to William Spady, a major advocate of this type of reform, three goals drive this new approach to creating school curricula. First, all students can learn and succeed, but not on the same day or in the same way. Second, each success by a student breeds more success. Third, schools control the conditions of success. In other words, students are seen as totally malleable creatures. If we create the right environment, any student can be prepared for any academic or vocational career. The key is to custom fit the schools to each student's learning style and abilities.

The resulting schools will be vastly different from the ones recent generations attended. Yearly and daily schedules will change, teaching responsibilities will change, classroom

activities will change, the evaluation of student performance will change, and most importantly, our perception of what it means to be an educated person will change.

What is OBE?

Education is a political and emotional process. Just ask Pennsylvania's legislators. That state, along with Florida, North Carolina, and Kansas, has been rocked by political battles over the implementation of outcome-based educational reforms. The governor, the state board of education, legislators, and parents have been wrestling over how, and if, this reform should reshape the state's schools. Twenty-six other states claim to have generated outcome-based programs, and at least another nine are moving in that direction.

Before considering the details of this controversy, let's review the major differences between the traditional approach to schooling in America and an outcome-based approach.

Whereas previously the school calendar determined what a child might do at any moment of any school day, now progress toward specific outcomes will control activity. Time, content, and teaching technique will be altered to fit the needs of *each* student. Credit will be given for accomplishing stated outcomes, not for time spent in a given class.

The teacher's role in the classroom will become that of a coach. The instructor's goal is to move each child towards pre-determined outcomes rather than attempting to transmit the content of Western civilization to the next generation in a scholarly fashion. This dramatic change in the role of the teacher will occur because the focus is no longer on content. Feelings, attitudes, and skills such as learning to work together in groups will become just as important as learning information—some reformers would argue more important. Where traditional curricula focused on the past, reformers argue that outcome-based methods prepare students for the future and

for the constant change which is inevitable in our society.

Many advocates of outcome-based education feel that evaluation methods must change as well since outcomes are now central to curriculum development. We can no longer rely on simple cognitive tests to determine complex outcomes. Vermont is testing a portfolio approach to evaluation, in which art work, literary works, and the results of group projects are added to traditional tests in order to evaluate a student's progress. Where traditional testing tended to compare the abilities of students with each other, outcome-based reform will be criterion based. This means that all students must master information and skills at a predetermined level in order to move on to the next unit of material.

Implementing OBE Reform

Reformers advocating an outcome-based approach to curriculum development point to the logical simplicity of its technique. First, a list of desired outcomes in the form of student behaviors, skills, attitudes, and abilities is created. Second, learning experiences are designed that will allow teachers to coach the students to a mastery level in each outcome. Third, students are tested. Those who fail to achieve mastery receive remediation or retraining until mastery is achieved. Fourth, upon completion of learner outcomes a student graduates.

On the surface, this seems to be a reasonable approach to learning. In fact, the business world has made extensive use of this method for years, specifically for skills that were easily broken down into distinct units of information or specific behaviors. But as a comprehensive system for educating young minds, a few important questions have been raised. The most obvious question is who will determine the specific outcomes or learner objectives? This is also the area creating the most controversy across the country.

Transitional vs. Transformational OBE

According to William Spady, a reform advocate, outcomes can be written with traditional, transitional, or transformational goals in mind. Spady advocates transformation goals.

Traditional outcome-based programs would use the new methodology to teach traditional content areas like math, history, and science. The state of Illinois is an example of this approach. Although outcomes drive the schooling of these children, the outcomes themselves reflect the traditional content of public schools in the past.

Many teachers find this a positive option for challenging the minimal achiever. For example, a considerable number of students currently find their way through our schools, accumulating enough credits to graduate, while picking up little in the way of content knowledge or skills. Their knowledge base reflects little actual learning, but they have become skilled in working the system. An outcome-based program would prevent such students from graduating or passing to the next grade without reaching a pre-set mastery level of competency.

The idea of transformational reform is causing much turmoil. Transformational OBE subordinates course content to key issues, concepts, and processes. Indeed, Spady calls this the "highest evolution of the OBE concept." Central to the idea of transformational reform is the notion of outcomes of significance. Examples of such outcomes from Colorado and Wyoming school systems refer to collaborative workers, quality producers, involved citizens, self-directed achievers, and adaptable problem solvers. Spady supports transformational outcomes because they are future oriented, based on descriptions of future conditions that he feels should serve as starting points for OBE designs.

True to the spirit of the reform philosophy, little mention is

made about specific things that students should know as a result of being in school. The focus is on attitudes and feelings, personal goals, initiative, and vision—in their words, the whole student.

It is in devising learner outcomes that one's worldview comes into play. Those who see the world in terms of constant change, politically and morally, find a transformation model useful. They view human nature as evolving, changing rather than fixed.

Christians see human nature as fixed and unchanging. We were created in God's image yet are now fallen and sinful. We also hold to moral absolutes based on the character of God. The learner outcomes that have been proposed are controversial because they often accept a transformational, changing view of human nature. Advocates of outcome-based education point with pride to its focus on the student rather than course content. They feel that the key to educational reform is to be found in having students master stated learner outcomes. Critics fear that this is exactly what will happen. Their fear is based on the desire of reformers to educate the whole child. What will happen, they ask, when stated learner outcomes violate the moral or religious views of parents?

For example, most sex-education courses used in our schools claim to take a value-neutral approach to human sexuality. Following the example of the Kinsey studies and materials from the Sex Education and Information Council of the United States, most curricula make few distinctions between various sex acts. Sex within marriage between those of the opposite sex is not morally different from sex outside of marriage between those of the same sex. The goal of such programs is self-actualization and making people comfortable with their sexual preferences.

Under the traditional system of course credits a student could take a sex-ed course, totally disagree with the instruction

and yet pass the course by doing acceptable work on the tests presented. Occasionally, an instructor might make life difficult for a student who fails to conform, but if the student learns the material that would qualify him or her for a passing grade and credit towards graduation.

If transformational outcome-based reformers have their way, this student would not get credit for the course until his or her attitudes, feelings, and behaviors matched the desired goals of the learner outcomes. For instance, in Pennsylvania the state board had recommended learner outcomes that would evaluate a student based on his or her ability to demonstrate a comprehensive understanding of families. Many feel that this is part of the effort to widen the definition of families to include homosexual couples. Another goal requires students to know about and *use* community health resources. Notice that just knowing that Planned Parenthood has an office in town isn't enough, one must use it.

Parents vs. the State

The point of all this is to say that transformational outcome-based reform would be a much more efficient mechanism for changing our children's values and attitudes about issues facing our society. Unfortunately, the direction these changes often take is in conflict with our Christian faith. At the core of this debate is this question, "Who has authority over our children?" Public officials assume they do. Governor Casey of Pennsylvania, calling for reform, told his legislature, "We must never forget that you and I—the elected representatives of the people—and not anyone else—have the ultimate responsibility to assure the future of our children." I hope this is merely political hyperbole. I would argue that parents of children in the state of Pennsylvania are ultimately responsible for their children's future. The state has rarely proved itself a trustworthy parent.

Outcome-based education is an ideologically neutral tool for

curricular construction; whether it is more effective than traditional approaches remains to be seen. Unfortunately, because of its student-centered approach, its ability to influence individuals with a politically correct set of doctrines seems to be great. Parents (and all other taxpayers) need to weigh the possible benefits of outcome-based reform with the potential negatives.

Other Concerns About OBE

Many parents are concerned about who will determine the learner outcomes for their schools. One criticism already being heard is that many states have adopted very similar outcomes regardless of the process put in place to get community input. Many wonder if there will be real consideration of what learner outcomes the public wants rather than assuming that educators know what's best for our children. Who will decide what it means to be an educated person, the taxpaying consumer or the providers of education?

If students are going to be allowed to proceed through the material at their own rate, what happens to the brighter children? Eventually students will be at many levels, what then? Will added teachers be necessary? Will computer-assisted instruction allow for individual learning speeds? Either option will cost more money. Some reformers offer a scenario where brighter students help tutor slower ones thereby encouraging group responsibility rather than promoting an elite group of learners. Critics feel that a mastery-learning approach will inevitably hold back brighter students.

With outcome-based reform, many educators are calling for a broader set of evaluation techniques. But early attempts at grading students based on portfolios of various kinds of works has proved difficult. The Rand Corporation studied Vermont's attempt and found that "rater reliability—the extent to which raters agreed on the quality of a student's work—was low." There is a general dislike of standardized tests among the

reformers because it focuses on what the child knows rather than the whole child, but is there a viable substitute? Will students find that it is more important to be politically correct than to know specific facts?

Another question to be answered by reformers is whether or not school bureaucracies will allow for such dramatic change? How will the unions respond? Will legislative mandates that are already on the books be removed, or will this new approach simply be laid over the rest, creating a jungle of regulations and red tape? Reformers supporting outcome-based education claim that local schools will actually have more control over their programs. Once learner outcomes are established, schools will be given the freedom to create programs that accomplish these goals. But critics respond by noting that although districts may be given input as to how these outcomes are achieved, local control of the outcomes themselves may be lost.

Finally, there are many who feel that focusing on transformational learner outcomes will allow for hidden agendas to be promoted in the schools. Many parents feel that there is already too much emphasis on global citizenship, radical environmentalism, humanistic views of self-esteem, and human sexuality at the expense of reading, writing, math, and science. They feel that education may become more propagandistic rather than academic in nature. Parents need to find out where their state is in regards to this movement. If an outcome-based program is being pursued, will it focus on traditional or transformational outcomes? If the outcomes are already written and adopted, can a copy be acquired? If they are not written yet, how can parents get involved?

If the state is considering a transformational OBE program, parental concerns should be brought before the legislature. If the reform is local, parents should contact their school board. Parents have an obligation to know what is being taught to their children and if it works. Recently, parental

resistance halted the OBE movement in Pennsylvania when it was pointed out to the legislature that there is no solid evidence that the radical changes pro-posed will actually cause kids to learn more. While we still can, let's make our voices heard on this issue.

Schooling Choices

Difficult Choices

Americans seem to be consumed by the idea of choice. But choice can be a burden as well as a blessing. Many Christian parents are confronted today with the complicated choice of how best to educate their children. As the moral standards in our society move further and further from biblical ones, the importance of choice looms ever larger.

In a recent conversation with a friend, this dilemma became

even more evident to me. His daughter is about to enter high school. She's bright and concerned about living Christianly. But her parents are afraid that her desire to be part of the "in" group, to be accepted, could cause her to be negatively influenced by her peers.

The public high school in town is very good. It could be considered above average in many ways. It offers a good academic program and a wide variety of activities. But these parents have some important reservations about sending their daughter there. Like most Christians, they are aware that public schools, by law, are supposed to maintain a strict neutrality concerning religious topics. This has, in recent years, been interpreted by many school administrators to mean that Christian views are to be removed from the classroom.

My friends are also aware that the ethical standards they believe are central to the upbringing of their children are considered quite unusual by most of the students, teachers, and other parents in the community, and that this would place an added burden on their daughter.

They don't feel capable of home schooling, although they are sympathetic with the philosophy of that movement. A Christian school is available, but it is an hour's drive away and represents a substantial financial commitment.

These friends, like many other people, are trying to sort through one of the more perplexing dilemmas facing our nation's parents. By what criteria should parents choose their children's schools?

Education is a fairly emotional topic: we all tend to return to our own mental images of what it means to be schooled. Some remember public schooling as a joyous time with Christian teachers and a peer group that resulted in lifelong friendships. Others may remember a private school setting that was overly restrictive, resulting in a negative experience.

But should we make the decision of how to educate our children today based on how things were twenty or thirty years ago, even in the same school system?

A helpful book titled *Schooling Choices: An Examination of Private, Public, & Home Education*, edited by Dr. Wayne House, allows three advocates to argue for their favorite schooling environment. Dr. David Smith, a superintendent of schools in Indiana, argues for parents making use of our public schools. Dr. Kenneth Gangel, a professor at Dallas Theological Seminary, defends the Christian school, and Greg Harris, the director of Christian Life Workshops, promotes home schooling. No conclusions are offered by the book; instead, the issues are developed by the proponents themselves, and then critiqued by the other two writers.

If we assume that Christian parents have a God-given responsibility to raise and educate their children in a manner that glorifies God, this discussion of educational choices becomes central to our parenting task. My own children have experienced all three forms of educational institutions. But rather than simplifying the dilemma, this experience has taught me to be hesitant to tell a parent that there is one best educational environment for every child in all circumstances.

Biblical Evidence

In support of a Christian school setting, Dr. Kenneth Gangel argues that all of a child's education should be Bible-centered. Ephesians 6:4 states, "Parents, do not exasperate your children, instead, bring them up in the training and instruction of the Lord." If we tell our children to live biblically but train them in a secular setting, we may indeed exasperate them. The question goes beyond sheltering our children from a classroom that is openly hostile to Christianity. Even a neutral approach, if that were possible, would be insufficient. The whole teaching environment must be

centered around a Christian worldview.

Public school superintendent Dr. David Smith feels that this is not necessarily true. Quoting Luke 8:16 and Matthew 28:19-20, he prompts Christians to be salt and light and to fulfil the Great Commission in the public schools. Dr. Smith sees public schooling as an experience that will strengthen our children, preparing them for the real world.

Dr. Gangel replies that nowhere does the Bible say, "Give a child twelve years of training in the way he should not go, and he will be made strong by it." Instead, God tells us, "Train a child in the way he should go, and when he is old he will not turn from it."

Both Kenneth Gangel and Greg Harris emphasize the importance of peer influence or companionship. Both of them quote Proverbs 13:20, "He who walks with the wise grows wise, but a companion of fools suffers harm," and 1 Corinthians 15:33, "Do not be deceived, bad company ruins good morals." It seems clear that our children's closest companions are to view morality biblically.

Luke 6:40 states, "Every one when he is fully taught will be like his teacher." Although David Smith feels that public school teachers are a conservative group and that many are Christians, both Gangel and Harris feel that having a Christian teacher is a requirement that should not be left to chance. Greg Harris goes one step further, arguing that parents are in the best position to teach and be companions to their children.

Another major concern is the nature of knowledge and true wisdom. If we believe that "the fear of the Lord is the beginning of knowledge" (Prov. 9:10) and that "in Christ are hidden all the treasures of wisdom and knowledge" (Col. 2:3), then the ability of a public school to give our children a true perspective on the way things really are is placed in

question. Perhaps public schools could function as vocational education centers, but even then moral questions would be involved.

Although we can see how Christian public school teachers might influence their students, they will be in constant conflict with textbooks that assume a naturalistic viewpoint and a curriculum that steers clear of controversy. Greg Harris argues that nothing will kill the zeal of a Christian teacher quicker than a public school setting. He feels that many Christians imagine they are having a quiet impact and rationalize that someday the fruit will be more visible, when in fact they are promoting a non-Christian worldview by dividing their professional life from their Christian faith.

Both Harris and Gangel would argue that Christians need to integrate their beliefs with all of their activities. This is becoming more and more difficult in the public school setting, where textbooks, self-esteem programs, drug- and sex-ed curricula, and even the teacher's unions have adopted a view of humanity and morality that portrays mankind as autonomous from God.

Spiritual Benefits

As Christian parents, we want our children to become spiritually mature more than anything else. While recognizing that their own free will is the greatest factor in their future growth, the Bible does give us hope that training in righteousness now will pay off later.

While admitting that one environment is not necessarily the best for all students, Dr. Smith feels that young people can develop a mature Christian walk in our public schools. In fact, he states that some Christian schools and home schoolers may be doing more harm than good. Because of their narrow, authoritarian, and defensive view towards society, some Christian parents may retard their children's spiritual and

educational development. He feels that these parents are building high emotional walls between themselves and the rest of the evangelical community. Two authors he spotlights for having encouraged such a view are Phyllis Schlafly and Tim LaHaye.

Mr. Harris, on the other hand, sees the home school as a vehicle for restoring the home as the center of life and faith. Our children can be nurtured in the warmth and security of the home while they are still developing spiritually and emotionally. Once their confidence has been built concerning who they are and what they believe, then they are better prepared for the cruel elements of life. Mr. Harris also argues that by not placing our children in an age-segregated setting, they will be less peer-oriented.

Dr. Gangel believes that Christian schools will teach our children that God's program of joy in Christ supersedes the world's program of pleasure. He points to Romans 12:2 and the admonition that we are not to be conformed to this world but transformed by the renewing of our mind. This transformation of our minds should take place in all areas of life, including morality and our personal concept of truth. Christian schools afford moments where biblical discussions on these topics are encouraged, not ridiculed.

Although some may feel that a Christian school shelters its students from the real world, Dr. Gangel feels that just the opposite is true. Sheltering occurs when one is taught that man is basically good and that sin is not his most pressing problem. The fact that parents want to remove their children from a setting where 282,000 of them are attacked each month and 112,000 are robbed is not sheltering—it's common sense.

The question posed by these writers seems to be a simple one: Is it better to educate our children in an environment potentially hostile to the Christian faith or to train them in one that holds exclusively to that view? I do not feel that

any of the writers would argue that we should not see the public schools as a potential mission field. The difference is that Mr. Smith wants our children to be the missionaries, where the others feel that only well-grounded adults (and occasionally a rare student) are capable of making an impact without compromising their faith.

Will a child mature more in an exclusively Christian setting or in one governed by secular standards? My personal belief is that it depends greatly on the spiritual maturity of the child. If a student understands the nature of the spiritual battle occurring in our society, and is being equipped at home and at church with the ammunition needed to withstand the inevitable onslaught, then his faith will probably grow. But how many of our young children fit this description? And how many parents are willing to risk their children becoming casualties before they have had the benefit of as much Christian training as possible?

Educational Advantages

Dr. Smith believes that the key to understanding public schools and their ability to educate is tied to the task that public schools have been given. All children are admitted to public schools, regardless of ability or background. In fact, in the last fifteen years alone, 15 million immigrants have been assimilated into our society largely through public schools. Dr. Smith argues that while we are graduating a higher percentage of our young people today than ever before, the average student is more proficient today in both reading and computing than in the past. He claims that the literacy rate today is much higher today than in earlier years.

In response to the accusations that other industrialized countries score higher on similar tests, Dr. Smith refers to work done by Dr. Torstein Husen, chairman of the International Association for the Evaluation of Achievement, who concludes that these tests are often not valid comparisons. As for the

Japanese, Mr. Smith would argue that it is the cultural differences in regard to the work ethic, not the educational systems themselves, that produce better results.

Finally, Dr. Smith states that "for the overwhelming majority of children public schools offer the best techniques, curriculum and extracurricular opportunities: in short, the most comprehensive education available." Although studies have shown that the large, well-established private schools do an admirable job teaching their affluent middle-class clientele, we know little about the effectiveness of the newer, more fundamental Christian schools.

Dr. Gangel challenges this assumption. In a recent year the bill for public education in the U.S. was \$278.8 billion, greater than all other nations combined. In a number of cities, public schools spend more than twice the average cost per student than do private schools. But comparisons with other countries and most private schools point to an inferior product, and studies such as *A Nation at Risk* state that mediocrity threatens our very future as a nation.

One study points out that if cost were not a factor, 45 percent of parents who send their children to public schools would change to private schools. In Chicago, almost half of the public school teachers send their own children to private schools. One very important reason for this is that on standardized tests such as the Stanford Achievement Test, Christian school students perform, on the average, 1.04 years ahead of their public school counterparts.

The reason for the superiority of Christian schools, according to Dr. Gangel, is that they are more focused than public schools. They have made a commitment to the basics of reading, writing, and math. They are not trying to be all things to all people, which is often the demand placed upon public schools. Smaller classes, a consistent philosophy of education, and strict discipline more than make up for whatever is lacking in

facilities and equipment.

Dr. Gangel's argument for private schools has recently been supported by a secular source. The Brookings Institution has published a study titled *Politics, Markets, and America's Schools* that sees public schools in America as unable to teach the average student effectively because of a lack of autonomy. Too many outside influences are demanding that schools solve our society's most unyielding social ills. As a result, the mission and focus of our public schools have been blurred.

Summary

Mr. Harris is not shy about his support of teaching our children at home. He asserts that home schooling yields better results in less time and with less money than the alternative systems. He feels the superiority of home schooling is based on two principles. First is the advantage of tutoring over classroom instruction. Tutors are much more able to focus on the student's work, give immediate feedback, and adjust the work to an appropriate difficulty level. Parents who focus on the individual learning styles of their children can fashion a curriculum that plays to the child's strengths, rather than forcing the child to conform to a fixed program.

The second principle is that of delight-directed studies. Parents can focus on what the students are actually interested in and use that natural curiosity to motivate the student. Content at an early age is not as important as developing a taste for the process of study and learning.

Another very important aspect of home schooling is character development. Mr. Harris contends that character is caught, not taught, and that the character of the teacher is of utmost importance. While the courts have stated that the behavior of public school teachers outside of the school setting is not relevant to their classroom duties, home schooling assures that a consistent model will be presented to the student.

Because of the controversy over self-esteem curricula that use relaxation techniques very similar to transcendental meditation and yoga practices, many parents are willing to take on the task of home schooling to avoid their children being forced to take part in therapy they deem harmful. Also, more and more evidence is accumulating that the drug- and sex-education programs used in our schools are breaking down parental and religious barriers to dangerous activities and replacing them with the incredible peer pressure of our youth culture.

Another concern for all Christians is the strong influence of the multiculturalism movement in public education. As this movement grows, it is removing from the curriculum the great works that have defined Western Civilization. Much of what is replacing these works is feminist and Marxist in nature, challenging the very foundation of our society's values.

A recent Gallup poll revealed that six out of ten parents with children in public schools are calling for greater choice in where their children will attend school. For the Christian parent, choice takes on a much larger role. Like all important decisions, it must depend on our goals as parents and our understanding of what God would have us to do as His servants. To choose wisely, we must know our children well. I personally believe that no single environment is appropriate for every child. We must understand that a spiritual war is being fought for the minds and hearts of our children, and that the philosophy of this world is not compatible with the gospel of Jesus Christ.

We have entered a period in our history as a people when a biblical worldview is no longer accepted as the predominant one. As a result, we must think carefully about the purpose of education. If education is just the accumulation of cold data, mere facts to be collected, public schools may be a viable option. That option becomes less attractive if we acknowledge the moral aspect of education.

In 1644 John Milton wrote a short essay on what education should accomplish for the Christian. It reads, in part, "The end then of learning is to repair the ruins of our first parents by regaining to know God aright, and out of that knowledge to love him, to imitate him, to be like him." Are our children learning to become disciples of Christ, and to love God with all of their hearts, their souls, and their minds?

Humanistic Psychology and Education

Based on an interview with Dr. W.R. Coulson, Don Closson discusses the damaging effects of humanistic psychology and the non-directive approach to drug and sex ed programs that it encourages.

Interview with Dr. Coulson

I recently had the opportunity to interview Dr. W. R. Coulson concerning the role that humanistic psychology is playing in education. Dr. Coulson was a long-time associate of Carl Rogers, who is considered to be the father of non-directive therapy, a therapy which has now been incorporated into self-esteem, sex-ed, and drug-ed curricula.

Dr. Coulson saw that this form of therapy had some success with mentally distressed people who knew they needed help, but following failures with locked-ward schizophrenics, normal

adults, and a parochial school system in California, Dr. Coulson broke with Carl Rogers and is now trying to undo the damage of what might be called humanistic education.

The results of non-directive therapy in education have been disappointing to anyone willing to look at the facts. We asked Dr. Coulson about these negative results. He said:

Every major study of [non-directive therapy in education] over the last 15 years . . . has shown that it produces an opposite effect to what anybody wants. There are packaged curricula all over the country with names like "Quest," "Skills For Living," "Skills for Adolescents," "Here's Looking at You 2000," "Omnibudsmen," "Meology," and "Growing Healthy." Every one of them gets the same effect, and that is that they introduce good kids to misconduct, and they do it in the name of non-judgmentalism. They say, "We're not going to call anything wrong, we're not going to call drug use wrong, because we'll make some of the kids in this classroom feel bad because they are already using drugs. Let's see if we can help people without identifying for them what they're doing wrong." What happens is that the kids who are always looking for the objective standard so that they can meet it . . . are left without [one].

We've trained [our children] to respect legitimate authority, and now the school is exercising its authority to say, "You've got to forget about what your church taught you or what your parents taught you; forget about that business about absolutes and right and wrong. Let's put those words in quotation marks— "right" and "wrong"—and let's help you find what you really deeply inside of you want."

We've got youngsters here now who . . . are under the authority of the school [and] are being persuaded that there is a better way. And that way is to make their own decisions. They're being induced to make decisions about activities that

the citizenry of the state have decided are wrong—drug use and teenage sex.

Abraham Maslow

My interview with Dr. W. R. Coulson next focused on the work of Abraham Maslow. Dr. Maslow constructed a theory of self-actualization that described how adults reach peak levels of performance. Much of modern educational practice assumes that Maslow's theories apply to children.

I asked Dr. Coulson, who worked with Maslow, about this connection between the theory of self-actualization and education in our public schools. He responded:

Abe Maslow, who invented this thing, said it never applied to the population at large, and most definitely not to children. Anybody who wants to check up on my claim that Abe Maslow did a complete turnabout need only look at the second edition of his classic text called Motivation and Personality. He wrote a very lengthy preface . . . [in] an attempt to say that his followers had completely misused what he had written and that it was going to be applied to exploiting children.

Writing in the late 60s, in his personal journals which were published after his death, Maslow said that this is the first generation of young people who have had their own purchasing power, and he feared that his theories of self-actualization and need fulfillment (that famous pyramid, Maslow's hierarchy of needs) would be used to steal little kids' money and virtue. . . . In the new preface he writes, "It does not apply to children; they are not mature enough; they have not had enough experience to understand tragedy, for example, nor do they have enough courage to be openly virtuous."

Our children tend to be somewhat intimidated by their virtue

because every other example they are getting, from the secular media, etc., is something very different from virtue.

As a good kid himself, growing up in a Jewish household, Abe Maslow knew that he tended to hang back in assertiveness. The good kids, I'm afraid, sometimes do that, and he saw everything thrown out of balance when the class was opened up to the kids to teach one another. His fear was in anticipation of the research results, which is that when you teach the teacher not to teach anymore but to become a facilitator, and you turn the chairs into a circle, and you say to the kids, in effect, "What would you like to talk about?"—the troubled kids begin to teach the good kids. The experienced kids, the kids who are doing drugs and having sex, teach the good kids that they are insufficiently actualized.

Education has adopted its view of moral and intellectual development from Dr. Maslow, an atheist who argued his views shouldn't be applied to children. The results are exactly what he predicted: our children are being exploited both economically, by tobacco and beer companies, and sexually by the Playboy mentality.

Self-Esteem

Parents are awakening to the disturbing fact that many educators see their children as mentally or emotionally in need of therapy. What is their illness? Low self-esteem. Low self-esteem is now named as the cause for everything from low grades to drug abuse. The solution being offered is to teach children how to acquire a healthy self-esteem.

Programs have been implemented for developing self-esteem at every grade level. DUSO (Developing Understanding of Self and Others) and Pumsy are two of the most popular elementary-school curricula. Most senior high drug-ed and sex-ed programs

focus on self-esteem as well.

I asked Dr. Coulson about the use of these programs, and how parents should react to their children's placement in them. He said:

I would raise a red flag . . . every time the word values is used. That's been a difficult word, because for a long time Christians were asking for value-oriented education. The problem is that values has become a relativistic word—it's subjective.

In California we taught people going through our encounter groups to say, "Well, you have your values, but who's to say your values should be my values?" We taught mothers and fathers to fear that they were selfish if they imposed their values on their children. There are children now who have become sufficiently sophisticated in this mock psychological wave that they can say to their parents, "We appreciate your value of church-going, it just doesn't happen to be mine. My experience is other than your experience. After all, Mom and Dad, you did grow up in a different era."

We've taught our children to be clumsy developmental psychologists who are capable of accusing their parents of wanting to oppress them by teaching them the truth. So what we have to do is turn the questions back to those who offer these curricula, like the people who wrote the DUSO curriculum or the Pumsy curriculum, and say, "Is this curriculum just your value? And if so, why should it be our value? Or is your curriculum somehow true? Do you claim to have knowledge in some way of the way things should be everywhere? Do you think you have a grip on a universal [truth], and, if you can grant that you do, can you not grant that we might, and that there might be some kind of competition between our understanding of what our universal obligations are in this world and your own understanding;

that there is some kind of universal or absolute that we are seeking?"

Because, in fact, they don't think that their values are relativistic. They think that everybody ought to be doing this. And that's precisely their error. I'm a non-directive psychotherapist, and if I were doing therapy, I would still be doing it like Carl Rogers, my teacher, taught me to do it. But I would not be doing it in classrooms, and I would not be doing it with people who could not profit from it. DUSO is an example of a method that's been taken out of the counseling room and into the classroom, and they're giving everybody medicine that's appropriate for a few.

Cooperative Education

Another important topic is the growing popularity of cooperative education programs, programs which place students into groups and allow them to use their own skills of critical thinking to arrive at conclusions about various issues.

Dr. Coulson observed:

Cooperative learning just strikes me as another one of those ways to prevent mothers and fathers and their agents, the public schools and private schools, from teaching effectively what is right and wrong to their children. In a cooperative class the questions are put to the kids, and once again we're going to find that the impaired children are going to wind up being the teachers of the unimpaired, because the unimpaired tend to have in them somewhat the fear of the Lord. They do not want to give offense, and the other kids don't care. . . . They'll go ahead and say whatever is on their minds.

Research, for example, from the American Cancer Society shows that teenage girls who smoke are far more effective in these

classroom discussions than teenage girls who don't smoke, because the teenage girls who smoke have outgoing personalities, party- types. Just let them take over the class and they really will; they'll run with the ball. And so again, the outcome of this kind of education is always the reverse of what anybody wants.

Central to virtually all of these programs is teaching children a method of decision-making. We asked Dr. Coulson to comment on these decision-making skills.

They teach what the moral philosophers call "consequentialism" as though the only morality is, "How's it going to work out?" They teach the children a method that they call "decision-making." Typically, there are Five Steps. Quest is a good example: In the First Step you identify the problem with killing someone for somebody for financial gain. The Second Step is to consider the alternatives. Immediately the Christian, the Jewish, the Muslim, or the God-fearing kid is at a disadvantage because he doesn't think there is an alternative. The only answer is "No!" It's an absolute "never"—"Thou shalt not kill." But the school says, "No, you can't be a decision-maker, a self-actualizing person, without looking at the alternatives."

The Third Step is to predict the consequences of each alternative. We know that teenagers particularly feel invulnerable. They think . . . those things adults warn them are going to happen if they misbehave won't happen, and adults are going to try to fool them and keep them under control for their own convenience. The Fourth Step is to make the decision and act upon it. The Fifth Step is . . . to make an evaluation of the outcome, and, if you don't like the outcome, then try again. And I say there are kids who have never gotten to Step Five because Step Four killed them. There are kids who have literally died from making a wrong

decision in Step Four or gone into unconsciousness, and there is no possibility of evaluation.

The Religious Nature of Humanistic Education

Why would educators implement a curriculum so damaging to what we as Christian parents want for our children? We must consider the religious assumptions held by those who created the theoretical foundations for these programs.

Schools have argued that self-esteem programs are fulfilling parental demands for values education without violating the so-called strict separation of church and state. In other words, they claim that programs such as Pumsy and DUSO are religiously neutral.

As we will hear from Dr. Coulson, the men who originated the theories behind these programs felt it their mission to influence others to see things through their particular worldview.

I asked Dr. Coulson to address the religious nature of humanistic education. He responded:

There are four major streams of influence on what I grew up calling humanistic education. . . . Today these influences remain. They are (1) Abe Maslow's work with self-actualization and hierarchy of needs; (2) Carl Rogers's work with non-directive classrooms based on his model of psychotherapy; (3) the work of Lewis Rath and his students—Sidney Simon, Howard Kirshenbaum, Merrill Harmon—called values clarification; (4) the work of Lawrence Kohlberg.

All of these men independently attribute their fundamental insight to John Dewey. In 1934 John Dewey wrote a book called

The Common Faith. John Dewey wanted a religion which could be held in common by everybody in America, and, in order for that to happen, it had to be a religion which excluded God. He called it religious humanism—that was Dewey's term for it, not my term.

Carl Rogers and Abe Maslow admitted to being religious humanists. Carl was from a fundamentalist, Protestant home; Abe was reared in a Jewish home, a somewhat observant home. Both of them got the religion of Dewey. Rogers was a student at Columbia when Dewey was in his Senate seat in the twenties, and Maslow was a doctoral fellow in the next decade. Maslow said in his journals, of the churchgoers, "They're not religious enough for me." And Rogers said to Richard Evans, "I'm too religious to be religious." What these men meant was, "I'm more religious than you are if you affirm a creed and if you go to church. I'm so religious I don't go to church."

Dr. Coulson went on to state that there is a fundamental incompatibility between Christianity and these programs. The two belief systems begin with different views of man and God.

As parents, we need to know what kind of therapy is being used on our children. If your child is receiving self-esteem training or non-directive therapy, he or she is losing time needed to become academically competent. That alone constitutes educational malpractice. But even more frightening is the possibility that your child's faith in the God of Scripture is being replaced with John Dewey's religious humanism.
