

Christian View of Politics

October 13, 2010

If you are wondering how Christians should think about politics, a new book out by Dr. Wayne Grudem provides a comprehensive answer. In his book, *Politics: According to the Bible*, he first provides a framework of biblical principles concerning politics and then sets forth his perspective on how the Bible informs our views on approximately sixty specific issues.

When [he was on my radio program recently](#) he said the major impetus for the book came from two people with the Alliance Defense Fund (Alan Sears and Ben Bull) and also from the president of the Center for Arizona Policy (Cathy Herrod). They encouraged him to write the book in order to educate Christians who often had wrong views about the role of Christians in the political process.

It is no surprise then that he begins the book by addressing five wrong views about Christians and government. They are: government should compel religion, government should exclude religion, all government is evil, we should do evangelism not politics, and we should do politics not evangelism. Dr. Grudem answers each of these views as well as related questions within that particular view. He then develops the key biblical principles concerning government and also delineates the elements of a biblical worldview.

A major section of the book provides a biblical perspective on nearly every issue imaginable. Dr. Grudem is certainly equipped to deal with these topics since he has been teaching biblical ethics for nearly 30 years. Most of these ethical issues also have political implications. And he is certainly able to handle the biblical material as the author of *Systematic Theology: An Introduction to Biblical Doctrine* and

the general editor of the ESV Bible.

Dr. Grudem's warning to Christians during this election season is, "Don't fall asleep when the future of your nation is at stake!" I would agree. Who we elect in November will determine the future of this nation. A great way to get educated and motivated is to buy and read his book. I'm Kerby Anderson, and that's my point of view.

Hayek and 'The Road to Serfdom'

Kerby Anderson gives an overview of the bestseller The Road to Serfdom and explains how it is consistent with a Christian worldview.

Why the Interest in Hayek and *The Road to Serfdom*?

A few years ago, if you said the name Friedrich Hayek to the average person in society, they wouldn't know his name. They might wrongly guess that he was the father of actress Selma Hayek. His name was unknown to non-economists.

Today he has much more visibility. People are reading his classic book, *The Road to Serfdom*, perhaps in order to make sense of our troubled economic climate and the current administration's policies. When TV host Glenn Beck talked about Hayek and *The Road to Serfdom*, the book went to

number one on Amazon and stayed in the top ten for some time. A [rap video](#) featuring cartoon versions of Hayek and John Maynard Keynes have been viewed over a million times on YouTube.

Why all the interest in a Vienna-born, Nobel Prize-winning economist who passed off the scene some time ago? People are taking a second look at Hayek because of our current economic troubles. Russ Roberts, in his op-ed, "Why Friedrich Hayek is Making a Comeback,"[{1}](#) says people are reconsidering four ideas Hayek championed.

First, Hayek and his fellow Austrian School economists such as Ludwig Von Mises argued that the economy is much more complicated than the simple economic principles set forth by Keynes. Boosting aggregate demand by funding certain sectors with a stimulus package of the economy won't necessarily help any other sector of the economy.

Second, Hayek highlighted the role of the Federal Reserve in the business cycle. The artificially low interest rates set by the Fed played a crucial role in inflating the housing bubble. Our current monetary policy seems to merely be postponing the economic adjustments that must take place to heal the housing market.

Third, Hayek argued in his book that political freedom and economic freedom are connected and intertwined. The government in a centrally controlled economy controls more than just wages and prices. It inevitably infringes on what we do and where we live.

Even when the government tries to steer the economy in the name of the "public good," the increased power of the state corrupts those who wield that power. "Hayek pointed out that powerful bureaucracies don't attract angels—they attract people who enjoy running the lives of others. They tend to take care of their friends before taking care of others."[{2}](#)

A final point by Hayek is that order can emerge not just from the top down but also from the bottom up. At the moment, citizens in many of the modern democracies are suffering from a top-down fatigue. A free market not only generates order but the freedom to work and trade with others. The opposite of top-down collectivism is not selfishness but cooperation.

Although *The Road to Serfdom* was written at the end of World War II to warn England that it could fall into the same fate as Germany, its warning to every generation is timeless.

Misconceptions About *The Road to Serfdom* (part one)

Hayek wrote his classic book *The Road to Serfdom*[\[3\]](#) more than sixty years ago, yet people are still reading it today. As they read it and apply its principles, many others misunderstand. Let's look at some of the prevalent misconceptions.

Because Hayek was a Nobel-winning economist, people wrongly believe that *The Road to Serfdom* is merely a book about economics. It is much more. It is about the impact a centrally planned socialist society can have on individuals. Hayek says one of the main points in his book is "that the most important change which extensive government control produces is a psychological change, an alteration in the character of the people. This is necessarily a slow affair, a process which extends not over a few years but perhaps over one or two generations."[\[4\]](#)

The character of citizens is changed because they have yielded their will and decision-making to a totalitarian government. They may have done so willingly in order to have a welfare state. Or they may have done so unwillingly because a dictator has taken control of the reins of power. Either way, Hayek argues, their character has been altered because the control over every detail of economic life is ultimately control of

life itself.

In the forward to his book, Hayek makes his case about the insidious nature of a soft despotism. He quotes from Alexis de Tocqueville's prediction in *Democracy in America* of the "new kind of servitude" when

after having thus successively taken each member of the community in its powerful grasp, and fashioned him at will, the supreme power then extends its arm over the whole community. It covers the surface of society with a network of small, complicated rules, minute and uniform, through which the most original minds and the most energetic characters cannot penetrate to rise above the crowd. The will of man is not shattered but softened, bent and guided; men are seldom forced by it to act, but they are constantly restrained from acting. Such a power does not destroy, but it prevents existence, and stupefies a people, till each nation is reduced to be nothing more than a flock of timid and industrious animals, of which the government is the shepherd. [\[5\]](#)

Tocqueville warned that the search for greater equality typically is accompanied by greater centralization of government with a corresponding loss of liberty. The chapter was insightfully titled, "What Sort of Despotism Democratic Nations Have to Fear."

Tocqueville also described the contrast between democracy and socialism:

Democracy extends the sphere of individual freedom; socialism restricts it. Democracy attaches all possible value to each man; socialism makes each man a mere agent, a mere number. Democracy and socialism have nothing in common but one word: equality. But notice the difference: while democracy seeks equality in liberty, socialism seeks equality in restraint and servitude. [\[6\]](#)

Hayek believed that individual citizens should develop their own abilities and pursue their own dreams. He argued that government should be a *means*, a mere *instrument*, “to help individuals in their fullest development of their individual personality.”[\[7\]](#)

Misconceptions About *The Road to Serfdom* (part two)

Another misconception about Hayek is that he was making a case for radical libertarianism. Some of the previous quotes illustrate that he understood that the government could and should intervene in circumstances. He explains that his book was not about whether the government should or should not act in every circumstance.

What he was calling for was a government limited in scope and power. On the one hand, he rejected libertarian anarchy. On the other hand, he devoted the book to the reasons why we should reject a pervasive, centrally controlled society advocated by the socialists of his day. He recognized the place for government’s role.

The government, however, should focus its attention on setting the ground rules for competition rather than devote time and energy to picking winners and losers in the marketplace. And Hayek reasoned that government cannot possibly know the individual and collective needs of society. Therefore, Hayek argues that the “state should confine itself to establishing rules applying to general types of situations and should allow the individuals freedom in everything which depends on the circumstances of time and place, because only the individuals concerned in each instance can fully know these circumstances and adapt their actions to them.”[\[10\]](#)

Wise and prudent government must recognize that there are fundamental limitations in human knowledge. A government that recognizes its limitations is less likely to intervene at

every level and implement a top-down control of the economy.

One last misconception has to do with helping those who suffer misfortune. It is true that he rejected the idea of a top-down, centrally controlled economy and socialist welfare state. But that did not exclude the concept of some sort of social safety net.

In his chapter on "Security and Freedom" he says, "there can be no doubt that some minimum of food, shelter, and clothing, sufficient to preserve health and the capacity to work can be assured to everybody."[\[11\]](#) He notes that this has been achieved in England (and we might add in most other modern democracies).

He went on to argue that the government should provide assistance to victims of such "acts of God" (such as earthquakes and floods). Although he might disagree with the extent governments today provide ongoing assistance for years, Hayek certainly did believe there was a place for providing aid to those struck by misfortune.

Paved With Good Intentions

Friedrich Hayek wrote *The Road to Serfdom* to warn us that sometimes the road can be paved with good intentions. Most government officials and bureaucrats write laws, rules, and regulations with every good intention. They desire to make the world a better place by preventing catastrophe and by encouraging positive actions from their citizens. But in their desire to control and direct every aspect of life, they take us down the road to serfdom.

Hayek says the problem comes from a "passion for conscious control of everything."[\[12\]](#) People who enter into government and run powerful bureaucracies are often people who enjoy running not only the bureaucracy but also the lives of its citizens. In making uniform rules from a distance, they

deprive the local communities of the freedom to apply their own knowledge and wisdom to their unique situations.

Socialist government seeks to be a benevolent god, but usually morphs into a malevolent tyrant. Micromanaging the details of life leads to what Hayek calls "imprudence." Most of us would call such rules intrusive, inefficient, and often downright idiotic. But the governmental bureaucrat may believe he is right in making such rules, believing that the local people are too stupid to know what is best for them. Hayek argues that citizens are best served when they are given the freedom to make choices that are best for them and their communities.

Hayek actually makes his case for economic freedom using a moral argument. If government assumes our moral responsibility, then we are no longer free moral agents. The intrusion of the state limits my ability to make moral choices. "What our generation is in danger of forgetting is not only that morals are of necessity a phenomenon of individual conduct but also that they can exist only in the sphere in which the individual is free to decide for himself and is called upon voluntarily to sacrifice personal advantage to the observance of a moral rule."[{13}](#) This is true whether it is an individual or a government that takes responsibility. In either case, we are no longer making free moral decisions. Someone or something else is making moral decisions for us. "Responsibility, not to a superior, but to one's conscience, the awareness of duty is not exacted by compulsion, the necessity to decide which of the things one values are to be sacrificed to others, and to bear the consequences of one's own decision, are the very essence of any morals which deserve the name."[{14}](#)

A socialist government may promise freedom to its citizens but it adversely affects them when it frees them from making moral choices. "A movement whose main promise is the relief from responsibility cannot but be antimoral in its effect, however lofty the ideals to which it owes its birth."[{15}](#)

Hayek also warned about the danger of centralizing power in the hands of a few bureaucrats. He argued that, “by uniting in the hands of a single body power formerly exercised independently by many, an amount of power is created infinitely greater than any that existed before, so much more far reaching as almost to be different in kind.”[\[16\]](#)

He even argues that once we centralize power in a bureaucracy, we are headed down the road to serfdom. “What is called economic power, while it can be an instrument of coercion, is, in the hands of private individuals, never exclusive or complete power, never power over the whole of life of a person. But centralized as an instrument of political power it creates a degree of dependence scarcely distinguishable from slavery.”[\[17\]](#)

Biblical Perspective

How does *The Road to Serfdom* compare to biblical principles? We must begin by stating that Friedrich Hayek was not a Christian. He did not confess Christian faith nor did he attend religious services. Hayek could best be described as an agnostic.

He was born in 1899 into an affluent, aristocratic family in Austria. He grew up in a nominally Roman Catholic home. Apparently there was a time when he seriously considered Christianity. Shortly before Hayek became a teenager, he began to ask some of the big questions of life. In his teen years, he was influenced by a godly teacher and even came under the conviction of sin. However, his quest ended when he felt that no one could satisfactorily answer his questions. From that point on he seems to have set aside any interest in Christianity and even expressed hostility toward religion.

Perhaps the most significant connection between Hayek and Christianity can be found in their common understanding of human nature. Hayek started with a simple premise: human

beings are limited in their understanding. The Bible would say that we are fallen creatures living in a fallen world.

Starting with this assumption that human beings are not God, he constructed a case for liberty and limited government. This was in contrast to the prevailing socialist view that human beings possessed superior knowledge and could wisely order the affairs of its citizens through central planning. Hayek rejected the idea that central planners would have enough knowledge to organize the economy and instead showed that the spontaneous ordering of economic systems would be the mechanism that would push forward progress in society.

Hayek essentially held to a high view and a low view of human nature. Or we could call it a balanced view of human nature. He recognized that human beings did have a noble side influenced by rationality, compassion, and even altruism. But he also understood that human beings also are limited in their perception of the world and subject to character flaws.

Such a view comports with a biblical perspective of human nature. First, there is a noble aspect to human beings. We are created in the image of God (Gen. 1:27-28) and are made a little lower than the angels (Psalm 8:5). Second, there is a flaw in human beings. The Bible teaches that all are sinful (Rom. 3:23) and that the heart of man is deceitful above all things (Jer. 17:9).

Hayek believed that "man learns by the disappointment of expectations." In other words, we learn that we are limited in our capacities. We do not have God's understanding of the world and thus cannot effectively control the world like socialists confidently believe that we can. We are not the center of the universe. We are not gods. As Christians we can agree with the concept of the "disappointment of expectations" because we are fallen and live in a world that groans in travail (Romans 8:22).

Although Hayek was not a Christian, many of the ideas in *The Road to Serfdom* connect with biblical principles. Christians would be wise to read it and learn from him the lessons of history.

New Media and Society

Kerby Anderson provides an overview of the ups and downs of the new media such as Facebook and Twitter, and their impact

on us.

How is the new media affecting the way we think and the way we interact with others in society? I want to look at the impact the Internet, social networks, and portable media devices are having on our world.

Rachel Marsden doesn't think it is positive. Writing in *The Wall Street Journal* she says:

Spare me the stories of your "genius" tech-savvy child who can name every country on Google Earth, or how, because of your iPhone, BlackBerry and three cell phones, you juggle 20 tasks at once and never miss any business—even at 4 a.m., because you sleep with your portable devices. Does anyone care that technology is destroying social graces and turning people into rude jerks?[\[1\]](#)

She isn't the first to notice that the new technology and new mobile devices are changing the way we interact with others. And, as we will discuss later, they apparently are also changing the way we think, affecting everything from creativity to concentration.

Rachel Marsden wonders, "When did it become acceptable for technological interaction to supersede in-person communication?" I have news for her. It happened long before cell phones were invented. When I was a graduate student at Yale University, I noticed something odd about my academic advisor. Whenever the phone would ring, he felt he had to answer it. He could be advising me or we could be deep in the midst of a discussion of a research project. But if the phone rang, he stopped the conversation and answered the phone, staying on the phone until that conversation was over. I began to think that the only way I could ever have a sustained conversation with him would be to call him on the phone.

Of course, mobile devices make it even easier to ignore face-to-face interaction. Now the world revolves around the person

who has instant access to others using these devices. Rebecca Hagelin says that narcissism has crept into our world. In 2006, *Time* magazine voted "You" as the "Person of the Year." So much of media and advertising today is about indulging your fantasies.

Rebecca Hagelin is concerned about the impact this is having on our children. "Young people spend hours every day updating their Facebook pages, post and e-mail countless pictures of themselves, and plug their ears with music to create a self-indulgent existence shut-off from everyone around them."[\[2\]](#)

While some of the impact is positive, much more should concern us and cause us to change our behavior.

The Internet and the Way You Think

Can the Internet change how you think? That was a question columnist Suzanne Fields asked recently.[\[3\]](#) If you go to Edge.org, you will notice that the question they pose for this year is slightly different. It is, "How is the Internet changing the way you think?" They pose this provocative question because of the impact of computer chips, digitized information, and virtual reality on the way we think and how we receive information in this "collective high-tech electronic ecosystem for the delivery of information."

I have also been wondering about the impact of the Internet and the new media on our thinking. Unlike Suzanne Fields, I wasn't wondering *if* the Internet was changing our thinking but *how* it is already changing the way we think. There were two reasons why I have been thinking about this.

First, look at the younger generation being raised on the Internet. If you haven't noticed, they think and communicate differently from previous generations. I have done radio programs and read articles about the millennial generation. They do think differently, and a large part of that is due to

the Internet.

A second reason for my interest in this topic is an *Atlantic* article by Nicholas Carr entitled “Is Google Making Us Stupid?” He says, “Over the past few years I’ve had an uncomfortable sense that someone, or something, has been tinkering with my brain, remapping the neural circuitry, reprogramming the memory.”[\[4\]](#)

It’s not that he believes his mind is going, but he notices that he isn’t thinking the way he used to think and he isn’t concentrating like he used to concentrate. “Immersing myself in a book or a lengthy article used to be easy. My mind would get caught up in the narrative or the turns of the argument, and I’d spend hours strolling through long stretches of prose. That’s rarely the case anymore. Now my concentration often starts to drift after two or three pages.”

He believes this comes from using the Internet and searching the web with Google. And he gives not only his story, but he also gives many anecdotes and as well as some research to back up his perspective.

For example, a developmental psychologist at Tufts University explains, “We are not only what we read. We are how we read.” The style of reading on the Internet puts “efficiency” and “immediacy” above other factors. Put simply, it has changed the way we read and acquire information.

Now you might say that would only be true for the younger generation. Older people are set in their ways. The Internet could not possibly change the way the brains of older people download information. Not true. The 100 billion neurons inside our skulls can break connections and form others. A neuroscientist at George Mason University says, “The brain has the ability to reprogram itself on the fly, altering the way it functions.”[\[5\]](#)

The Internet does appear to be altering the way we read and

think, but more research is needed to confirm if this true. If so, parents and educators need to take note of what is happening in our cyberworld.

BlackBerries, Twitter, and Concentration

Have portable media devices altered our ability to concentrate? That certainly seems to be the case. Nearly all of us have noticed that people with a BlackBerry sometimes seem distracted. And after they answer an e-mail, they seem to spend a few minutes trying to recollect their thoughts before they had the interruption.

An article in *Newsweek* magazine documents what many of us have always suspected: there are two major drawbacks to these devices.[\[6\]](#) The first is distraction overload. A study at the University of Illinois found that if an interruption takes place at a natural breakpoint, then the mental disruption is less. If it came at a less opportune time, the user experienced the “where was I?” brain lock.

A second problem is what is called “continuous partial attention.” People who use mobile devices (like a BlackBerry or an iPhone) often use their devices while they should be paying attention to something else. Psychologists tell us that we really aren’t multitasking, but rather engage in rapid-fire switching of attention among tasks. It is inevitable they are going to miss key information if part of their focus is on their BlackBerry.

But another hidden drawback associated is less creativity. Turning on a mobile device or a cell phone when you are “doing nothing” replaces what we used to do in the days before these devices were invented. Back then, we called it “daydreaming.” That is when the brain often connects unrelated facts and thoughts. You have probably had some of your most creative ideas while shaving, putting on makeup, or driving. That is

when your brain can be creative. Checking e-mail reduces daydreaming.

We also can see how new technology affects the way we process information and react to it emotionally. The headline of one article asked this question: Can Twitter make you amoral?[\[7\]](#) Research was done at the Brain and Creativity Institute of the University of Southern California to see the impact of social networks like Twitter.

What the researchers found was that human beings can sort information very quickly. And they can respond in fractions of seconds to signs of physical pain in others. But other emotions (like admiration and compassion) take much longer to register. In fact, they found that lasting compassion in a relationship to psychological suffering requires a level of persistent, emotional attention.

So how does that relate to a technology like Twitter? The researchers found that there was a significant emotional cost of heavy reliance on a rapid stream of news snippets obtained through television, online feeds, or social networks such as Twitter. One researcher put it this way: "If things are happening too fast, you may not even fully experience emotions about other people's psychological states and that would have implications for your morality."

The point of these studies is that media does have an impact. A wise and discerning Christian will consider the impact and limit its negative effects.

Social Networks

Social networks such as Facebook and MySpace create an interconnected web of friends and family. People who study these networks are beginning to understand the impact they are having on us.

At a social networking site, you find someone and ask to be his or her friend. Once you are accepted, you become a member of their network, and they become a member of your network. This opens the door to finding and making additional friends. The ability to extend your circle of friends is one of the many benefits of social networking.

One concern about social networking is that it, like most of the new media, increases distraction and fragmentation of thought. The quotes, stories, jokes, and video clips come at an increased rate. A concentrated conversation with one person is difficult. Look over the shoulder of someone in a social networking site who has lots of friends. Content quickly scrolls downward, and it feels like you are at a party where lots of people are all talking at once.

Also these networks tend to shorten our time of concentration. Steven Kotler makes this case in his *Psychology Today* blog, "How Twitter Makes You Stupid."[\[8\]](#) He once asked the author of the best-selling book why he called it the "8 Minute Meditation." The author told him that eight minutes was the length of time of an average segment of television. He reasoned that "most of us already know exactly how to pay attention for eight minutes."

Steven Kotler argues that Twitter is reducing the time of concentration to a few dozen words. He thinks that constantly using Twitter will tune "the brain to reading and comprehending information 140 characters at a time." He predicts "that if you take a Twitter-addicted teen and give them a reading comprehension test, their comprehension levels will plunge once they pass the 140 [character] mark." I am sure someone is already testing that hypothesis. Soon we should know the results.

Social networks do help us keep track of people who do not live near us, and that's a plus. But we are kidding ourselves if we believe that social networks are the same thing as true

community. Shane Hipps, writing in *Flickering Pixels*, says this about virtual communities: “It’s virtual—but it ain’t community.”

Social networks also have a great deal of power to influence us. Sociologists Nicholas Christakis and James Fowler document this in their new book, *Connected: The Surprising Power of Our Social Networks and How They Shape Our Lives*. They believe that happiness is contagious and so is obesity and quitting smoking. We are not only influenced by our friends, but are even influenced by our friend’s friends. They say the world is governed by what they call “three degrees of separation.”

Addiction is another concern. Years ago, counselors discovered Internet addiction. Now they are starting to talk about Facebook addiction. Lots of youth and adults spend too much time in front of a computer. Social networks are wonderful tools, but wisdom and discernment are necessary in order to use them correctly.

Media Addiction

The Barna Group does lots of surveys, and that has led George Barna to conclude that “media exposure has become America’s most widespread and serious addiction.”^{9} I have always been hesitant to label our high levels of media exposure an addiction. We seem to have an addiction label for every behavior. But George Barna makes a convincing case.

Addiction changes our brains by altering the chemical balance and flow within the brain and by even altering the structure of the brain. According to the American Psychiatry Association, we can legitimately call something an addiction when certain symptoms manifest themselves.

For example addictions change our brain structure, altering emotions, motivations, and memory capacity. Addictions cause withdrawal symptoms when exposure to the addictive item is

eliminated. Addictions cause the people to abandon or reduce their involvement in normal and healthy activities.

Certainly media can be positive in terms of education and relaxation. But most media content, Barna argues, “winds up serving the lowest common denominator because that’s where the largest audience” is to be found.

There is a generational trend. The builder generation did not grow up with media and never became accustomed to it. The boomer generation embraced media, and the following generations expanded its use in ways unthinkable a few decades ago.

If we were truly serious about controlling the media input in our lives and our children’s lives, we would see examples of parents putting boundaries on media exposure. We see nothing of the sort. Expenditures on personal media, in-home media, and mobile media continue to increase.

It is not that parents don’t understand the dangers. Barna reports that three-quarters of parents say that exposure of their children to inappropriate media content are one of their top concerns. But they continue to buy their kids the media tools and continue to allow them to be exposed to inappropriate content.

By the time a young person reaches age 21, he or she will have been exposed to more than 250,000 acts of violence through TV, movies, and video games. He or she will have listened to thousands of hours of music with questionable lyrical content. Most parents know that much of what their children see or hear isn’t wholesome

This may be one of the biggest challenges for society in general and even the church in particular. Most parents recognize the danger of the media storm in which they and their children live. But they are unwilling to take the necessary steps to set boundaries or end their media

addiction.

Some Concluding Biblical Principles

In a previous article on [Media and Discernment](#), I talked about the need for Christians to evaluate the impact of media in their lives. We need to develop discernment and pass those biblical principles to our children and grandchildren.

The new media represents an even greater threat and can easily conform us to the world (Rom. 12:2). Media is a powerful tool to conform us to a secular worldview and thus take us captive (Col. 2:8) to the false philosophies of the world.

Christians should strive to apply the following two passages to their lives as they seek discernment concerning the media. The first is Philippians 4:8. “Finally, brothers, whatever is true, whatever is noble, whatever is right, whatever is pure, whatever is lovely, whatever is admirable—if anything is excellent or praiseworthy—think about such things.”

The second is Colossians 3:2–5. “Set your minds on things above, not on earthly things. For you died, and your life is now hidden with Christ in God. When Christ, who is your life, appears, then you also will appear with him in glory. Put to death, therefore, whatever belongs to your earthly nature: sexual immorality, impurity, lust, evil desires and greed, which is idolatry.”

Capitalism and Socialism

Kerby Anderson writes that recent polls show that a mere majority of Americans believe in capitalism. And those under the age of 30 are essentially evenly divided about capitalism and socialism. Is there a war on capitalism? And are there answers to the typical criticisms of capitalism?

Poll About Capitalism

Americans traditionally have supported capitalism over socialism, but there is growing evidence that might be changing. The latest Rasmussen poll showed that a mere majority of Americans (fifty-three percent) say capitalism is better than socialism.^[1] And one in five (twenty percent) say that socialism is better than capitalism. America may not be ready to reject capitalism for socialism, but this poll does show less enthusiasm than in the past.

Age is a significant component. If you look at adults under the age of thirty in the poll, you find they are essentially evenly divided. More than a third of young people (thirty-seven percent) prefer capitalism, another third (thirty-three percent) embrace socialism, and the rest (thirty percent) are undecided.

What are we to make of this? First, the terms capitalism and socialism weren't defined in the poll. I suspect that if the pollsters explained the various tenets of socialism that the percentages would change. Defining capitalism would also be important since many would not necessarily associate it with a free market but instead might have visions of an evil, greedy capitalist. After all, that is how many businessmen are portrayed in the media.

How should we define capitalism and socialism? Here are some brief definitions of these two economic systems. Capitalism is an economic system in which there is private property and the means of production are privately owned. In capitalism, there is a limited role for government. Socialism is an economic system in which there is public or state ownership of the means of production and the primary focus is on providing an equality of outcomes. In socialism, the state is all-important and involved in central planning.

Another question surfacing from the Rasmussen poll concerns those under the age of thirty. They are probably the least likely to associate socialism with Soviet-style repression. Instead, they may have in their minds the current government push toward European socialism and find that more attractive. Also, they are less likely to have "skin in the game." When you ask investors this same question about capitalism and socialism, they favored capitalism by a five-to-one margin.

Political affiliation is another determinant of support for capitalism. Republicans favor capitalism over socialism by an eleven-to-one margin. By contrast, Democrats are more closely divided. They barely favor capitalism (thirty-nine percent) over socialism (thirty percent).

In what follows I'll look at the debate between capitalism and socialism and provide a biblical critique. [{2}](#)

The War Over Capitalism

I noted that fifty-three percent of Americans say capitalism is better than socialism. While that is a majority, it is a mere majority and hardly a strong endorsement of free market economics.

We might wonder if the percentages of support for these economic systems might change if different words were used. A survey taken in 2007 came to a different conclusion. The Pew Research Center asked people if they were better off "in a free market economy even though there may be severe ups and downs from time to time." In that case seventy percent agreed, versus twenty percent who disagreed. [{3}](#) This might suggest that Americans like terms like "free market" more than "capitalism."

These polls illustrate that we are in the midst of a cultural conflict over capitalism. That is the conclusion of Arthur Brooks. His op-ed in *The Wall Street Journal* argues that "The Real Culture War is Over Capitalism." [{4}](#) He notes that President Obama's tax plan will increase the percentage of American adults who pay no federal income tax from forty percent to forty-nine percent (and another eleven percent will pay less than five percent of their income in tax). This has the potential to change attitudes about taxes since half of America won't be paying taxes.

Brookes says, "To put a modern twist on the old axiom, a man

who is not a socialist at 20 has no heart; a man who is still a socialist at 40 either has no head, or pays no taxes. Social Democrats are working to create a society where the majority are net recipients of the 'sharing economy.' They are fighting a culture war of attrition with economic tools." {5}

These various polls, as well as the current debate about the role of government in the economy, illustrate why we need to educate adults and young people about economics and the free market system (in my book, *Making The Most of Your Money in Tough Times*, I devote a number of chapters to economics and economic systems). How can we use biblical principles to evaluate economic systems like capitalism and socialism? The Bible does not endorse a particular system, but it does have key principles about human nature, private property rights, and the role of government. These can be used to evaluate economic systems.

The Bible warns us about the effects of sinful behavior in the

world. Therefore, we should be concerned about any system that would concentrate economic power and thereby unleash the ravages of sinful behavior on the society. We should reject socialism and state-controlled economies that would concentrate power in the hands of a few sinful individuals.

Economic Criticisms of Capitalism

People often reject the idea of capitalism because they believe one of the *economic* criticisms of capitalism. Here are two of these criticisms.

The first economic criticism is that capitalism leads to monopolies. These develop for two reasons: too little government, and too much government. Monopolies have occurred in the past because government has not been willing to exercise its God-given authority. Government finally stepped in and broke up the big trusts that were not allowing the free enterprise system to function correctly.

But in recent decades, the reason for monopolies has often been too *much* government. Many of the largest monopolies today are government-sanctioned or -sponsored monopolies that prevent true competition from taking place. The solution is for government to allow a freer market where competition can take place.

Let me add that many people often call markets with limited competition "monopolies" when the term is not appropriate. For example, the major car companies may seem like a monopolies or oligopolies until you realize that in the market of consumer durables the true market is the entire western world.

The second criticism of capitalism is that it leads to pollution. In a capitalistic system, pollutants are considered externalities. The producer will incur costs that are external to the firm so often there is no incentive to clean up the pollution. Instead, it is dumped into areas held in common

such as the air or water.

The solution in this case is governmental regulation. But this need not be a justification for building a massive bureaucracy. We need to find creative ways to direct self-interest so that people work towards the common good.

Sometimes when speaking on the topic of government and the environment, I use a thought experiment. Most communities use the water supply from a river and dump treated waste back into the water to flow downstream. Often there is a tendency to cut corners and leave the waste treatment problem for those downstream. But imagine if you required that the water intake pipe be downstream and the waste pipe be upstream. If you did require this (and this is only a thought experiment) you would instantly guarantee that you would have less of a problem with water pollution. Why? It is now in the self-interest of the community to clean the wastewater being pumped back into the river.

We can acknowledge that although there are some valid economic criticisms of capitalism, these can be controlled by limited governmental control. And when capitalism is wisely controlled, it generates significant economic prosperity and economic freedom for its citizens.

Moral Criticism of Capitalism

Another reason people often reject the idea of capitalism is because they believe it is *immoral*.

One of the moral arguments against capitalism involves the issue of greed. And this is why many Christians feel ambivalent towards the free enterprise system. After all, some critics of capitalism contend that this economic system makes people greedy.

To answer this question we need to resolve the following

question: Does capitalism make people greedy or do we already have greedy people who use the economic freedom of the capitalistic system to achieve their ends? In light of the biblical description of human nature, the latter seems more likely.

Because people are sinful and selfish, some are going to use the capitalist system to feed their greed. But that is not so much a criticism of capitalism as it is a realization of the human condition. The goal of capitalism is not to change people but to protect us from human sinfulness.

Capitalism is a system in which bad people can do the least harm, and good people have the freedom to do good works. Capitalism works well if you have completely moral individuals. But it also functions adequately when you have selfish and greedy people.

Important to this discussion is the realization that there is a difference between self-interest and selfishness. All people have self-interests that can operate in ways that are not selfish. For example, it is in my self-interest to get a job and earn an income so that I can support my family. I can do that in ways that are not selfish.

Capitalism was founded on the observation that all of us have self-interest. Rather than trying to change that, economists saw that self-interest could be the motor of the capitalist system.

By contrast, other economic systems like socialism ignore the biblical definitions of human nature. Thus, they allow economic power to be centralized and concentrate power in the hands of a few greedy people. Those who complain of the influence major corporations have on our lives should consider the socialist alternative of how a few governmental bureaucrats control every aspect of their lives.

Greed certainly occurs in the capitalist system. But it does

not surface just in this economic system. It is part of our sinfulness. Capitalism may have its flaws as an economic system, but it can be controlled to give us a great deal of economic prosperity and economic freedom.

Capitalism and the Zero-Sum Myth

There is a myth that is often at the very foundation of many of the criticisms of capitalism. We can call it the zero-sum myth. By zero-sum, I mean that one person wins and another person loses. Most competitive games are zero-sum games. One team or person wins; the other loses.

In most cases, the free market can be a win-win scenario rather than a win-lose scenario. In his book, *Money, Greed, and God*, Jay Richards uses a fun example from his childhood to illustrate this point.[\[6\]](#)

In the sixth grade, his teacher had them play the “trading game.” She passed out little gifts to all of the students: a ten-pack of Doublemint gum, a paddleboard with a rubber ball, a Bugs Bunny picture frame, an egg of Silly Putty, a set of Barbie trading cards, etc.

She then asked the students to rate how much they liked their gift on a scale from one to ten. Then she compiled the score and put it on the board. Then she divided the class into five groups of five students and told them they could trade their gift with anyone in the group. Jay traded the Barbie trading cards he had with a girl in his group who had the paddleboard.

Then the teacher asked them to rate how much they liked their gifts. And she put that number on the board. The total score went up.

Then she told the students they could trade with anyone in the room. Now they had twenty-four possible trading partners rather than just the four in their group. The trading really

began to take off. Once again, the teacher asked them to rate their gifts. When she put the number on the board, the total score went up again.

Almost everyone ended up with a toy he or she liked more than when the trading began. In fact, the only individual scores that did not go up were from students who really liked the gift they received initially from the teacher.

The students that day learned some valuable lessons about a free economy. When people are free to trade, they can add value to the traded item even though it remained physically unchanged. And they saw the value of having more trading partners (in this case twenty-four rather than four). Most of all, they learned that the free exchange can be a win-win proposition.

We can certainly admit that sometimes capitalism is not a win-win proposition. When there are limited resources and an individual or corporation is able to manipulate the political system in their favor, it is a win for the manipulator but a loss for Americans who did not have such political access. However, that is not a flaw in capitalism, but what results when government is corrupt or is corrupted by those who manipulate the system

Exponential Times – Applying Christian Discernment

Kerby Anderson discusses some of the trends in our rapidly changing world, calling for Christians to “understand the times” with discernment.

You may have seen the YouTube video asking, “Did you know”? Sometimes it has the title “We are living in exponential times.” I want to look at some of the trends that illustrate the fact that we live in exponential times. While I will use the video as a starting point, I will also be citing other authors and commentators as well.

The video begins by talking about population. How often we forget that there are countries like China and India that have a billion people. For example, the video says that if you are one in a million in China, there are thirteen hundred other people just like you. That is because there are over a billion people in China.

The video also points out that twenty-five percent of India’s population with the highest IQs is actually greater than the total population of America. Put another way, India has more honors kids than America has kids.

This reminds me of a statement in *The World Is Flat* by Thomas Friedman. He says that when he was growing up his parents

would tell him "Finish your dinner. People in China and India are starving." Today he tells his daughters, "Girls, finish your homework—people in China and India are starving for your jobs."[{1}](#)

Consider the population explosion. There were one billion people in 1800. We did not reach two billion until 1930. The planet had three billion people in 1960 and four billion in 1975. We reached five billion people in 1987 and six billion people in 1999. It is estimated that the planet will hold seven billion people in 2012.

Of course, life expectancy has been going up, and this is changing the demographic of various countries. Many more people are living to age 100 and beyond. For example, there were only two hundred centenarians in France in 1950. The number is projected to reach a hundred fifty thousand by year 2050. That is a seven-hundred-fifty-fold increase in one hundred years.[{2}](#)

Or consider the United States population increase in this demographic group. In 1990, there were approximately, thirty thousand centenarians. Some believe that estimate may be a bit too high, but it provides an approximate baseline. The U.S. Census Bureau estimates there will be two hundred sixty-five thousand centenarians by 2050.[{3}](#)

One last trend is that world population growth is slowing down as populations are aging. Demographers tell us that we need 2.1 children per woman to replace a population. Back in the 1950s, the average number of babies per woman of child-bearing age was 5.0 but has been dropping ever since. It will most likely reach 2.3 in 2025.[{4}](#)

In the developing world, fertility is already moderately low at 2.58 children per woman and is expected to decline further to 1.92 children per woman by mid-century.[{5}](#) While only three countries were below the population replacement level of 2.1

babies in 1955, there will be one hundred and two such countries by 2025.[{6}](#)

Exponential Growth

What is the impact of exponential growth on society? Richard Swenson argues in his book *Margin* that this has created unprecedented problems for us:

One major reason our problems today are unprecedented is because the mathematics are different. Many of the linear lines that in the past described our lives well have now disappeared. Replacing them are lines that slope upward exponentially.[{7}](#)

Exponential growth is very different from arithmetic growth. We live our lives in a linear way. We live day-to-day, week-to-week, month-to-month. But the changes taking place around us are increasing not in a linear way but in an exponential way.

Exponential growth is not something that we would consider intuitive. Scott Armstrong demonstrated that when he asked a graduate class of business students the following question. If you folded a piece of paper in half forty times, how thick would it be? Most of the students guessed it would be less than a foot. A few guessed it would be greater than a foot but less than a mile. Two students guessed it would be greater than a mile but less than two thousand miles. The correct answer is that the paper would be thick enough to reach from here to the moon.[{8}](#)

This is the challenge of living in exponential times. If the graph is linear, we have a fairly good grasp of what that will mean for us in the future. When the graph curves upward exponentially, we have a difficult time comprehending its impact.

But will the graph continue to trend upward? It will until it reaches some limit. Eventually there is an upper limit to most of the trends we are seeing. Objective things (people, government buildings, and organizations) have limits. Subjective things (relationships, creativity, and spirituality) also have limits.

At this point the curve changes from a J-curve to an S-curve. The exponential slope begins to flatten and reach a new equilibrium. Eventually there is a turning point at which the upward curve no longer grows exponentially. Finally, the curve levels as growth and limits reach an equilibrium.

One of the challenges of living in exponential times is that the various trends are at different points on the curve. The amount of new information seems to be exploding exponentially and looks like a J-curve. The number of e-mails you receive might not be growing exponentially like it did a few years ago but may still be increasing. Population in many developing countries has been leveling off (and often decreasing), and so the graph looks more like the S-curve. All of these trends are at different parts of the curve and are happening simultaneously. Thus, it is often difficult for us to comprehend what this means to us personally.

Futurists who are trying to understand what will happen in the future are faced with an even more daunting task. If they look at each trend in isolation, they can begin to get an idea of what might happen. But as soon as someone tries to integrate all of these trends into a comprehensive whole, the future becomes blurred.

Trying to integrate all the various trends (many growing exponentially) creates a challenge for anyone trying to accurately predict the future. We might know the individual trends, but trying to integrate hundreds of trends into a comprehensive picture is difficult, if not impossible.

Warnings About Exponential Growth

In the past, a number of authors have warned about the dangers of exponential growth. And because their predictions did not come to pass, the concept of exponentiality and its impact have faded from current discussion.

In the early nineteenth century, Thomas Malthus wrote his famous *Essay on the Principle of Population* in which he argued that population growth would outstrip food production. He reasoned that population would grow exponentially while food production would merely grow arithmetically. Thus, he predicted a future crisis due to this exponential growth.

In 1968, Stanford biologist Paul Ehrlich published his controversial best-seller, *The Population Bomb*. He also noted that population was growing exponentially and made numerous predictions about catastrophes that would befall the human race in the 1970s and 1980s.

Dennis Meadows and others with a group known as The Club of Rome published their report in the book *The Limits to Growth*. The authors used a computer simulation to consider the interaction of five variables (world population, industrialization, pollution, food production and resource depletion). By changing the various assumptions about population and resources, they predicted various dire scenarios for the future.

Of course these doomsday predictions never came to pass. So it was inevitable that discussion and warning about exponential growth were no longer published on the front pages of newspapers and newsmagazines.

Another reason we have ignored the potential impact of exponential growth is due to the remarkable technological achievements of the twentieth century. Automobile manufacturers have been able to significantly increase gas

mileage in cars. Petroleum engineers have been able to find more effective and efficient ways to pull oil from the ground. Farmers and scientists have essentially tripled global food production since World War II, thereby outpacing even population growth.

Nevertheless, there are indeed limits to growth. If we understand what those limits are and work within them, then the future will be bright. If we ignore them, the human race could be in for some rough times. Harvard biologist E.O. Wilson expressed this dichotomy when he asked, "Are we racing to the brink of an abyss, or are we just gathering speed for a takeoff to a wonderful future? The crystal ball is clouded; the human condition baffles all the more because it is both unprecedented and bizarre, almost beyond understanding."[{9}](#)

Columnist Tom Harper is more pessimistic: "Currently we are behaving like insane passengers on a jet plane who are busy taking all the rivets and bolts out of the craft as it flies along."[{10}](#)

Whatever our future, it is certain that it will be more complex than ever before. And it will be a world in which information has exploded exponentially.

Information Explosion

One aspect of exponential times is the information explosion. The YouTube video by the same title reminds us that information is exploding exponentially. For example, it points out that there are thirty-one billion searches on Google every month. The best estimate is now there are about thirty-six billion searches on Google each month. In 2006, it was 2.7 billion. That's a thirteen-fold increase in just three years.

In order to keep up with this information explosion, engineers have been working at a breakneck pace to increase the efficiency and capacity of computers and other devices that

process and store information. Every year, fifty quadrillion transistors are produced. That is more than six million for every human on the planet.[{11}](#)

Look at the exponential growth of Internet devices. In 1984, there were a thousand. By 1992, there were one million. By 2008, there were one billion and the number is about to exceed two billion. Some experts believe that there will be fifteen billion Intelligent Connected Devices by the year 2015.[{12}](#)

The YouTube video estimates that a week's worth of *The New York Times* contains more information than a person was likely to come across in a lifetime in the eighteenth century. This figure is more difficult to quantify even though it, or variations of it, is cited all the time.

In fact, this may be our biggest challenge in the twenty-first century. There is so much information that most of us are having a difficult time trying to make sense of all the data. Facts, figures, and statistics are coming at us at an accelerating rate. That is why we need to evaluate everything we see, read, and hear from a Christian worldview in order to make sense of the world around us.

One last point is that most of this information is still in the English language. The YouTube video says that there are about 540,000 words in the English language. And this is five times as many words as in the time of Shakespeare.

It turns out that these estimates may be a bit off. Part of the problem is deciding what constitutes a word. After all, we have so many derivatives of a word and we have many words that have multiple meanings. Do you count the word or the various meanings of a word?

Let's start with the English vocabulary at the time of Shakespeare. We know how many words he used. If you count all the words in his plays and sonnets there are 884,647 of them. The estimate for the number of different words he used varies

from eighteen to twenty-five thousand. I might also mention that it appears that Shakespeare coined or invented about fifteen hundred new words. Even so, it seems like the estimate that there were a hundred thousand English words in Shakespeare's time might be too high.

Do we have over five hundred thousand words in the English language today? Again, it depends how you count words. The largest English dictionary has about four hundred thousand entries. A more realistic number is around two hundred thousand. The latest edition of the *Oxford English Dictionary* contains entries for 171,476 words in current use, and 47,156 obsolete words.

Nevertheless, English has become the language of choice for the world. Approximately three hundred seventy-five million people speak English as their first language. Another seven hundred million speak English as a foreign language. English is also the language most often studied as a foreign language in the European Union. English is more widely spoken and written than any other language.

English is the medium for eighty percent of information stored in the world's computers. English is the most common language used in the sciences as well as on the Internet. Not only have the number of English words expanded since Shakespeare's time, its influence has expanded as well.

Exponential Times and a Biblical Worldview

The Bible tells us that we are to understand the times in which we are living. First Chronicles 12:32 says that the sons of Issachar were "men who understood the times, with knowledge of what Israel should do." Likewise we need to understand our times with knowledge of what we as Christians should do.

We have also been looking to the future by trying to plot trends from today into tomorrow. The Bible also tells us that we should plan for the future. Isaiah 32:8 says that “the noble man devises noble plans, and by noble plans he stands.” Proverbs 16:9 says “the mind of man plans his way, but the Lord directs his steps.” So we should not only plan for the future, but commit those plans to the Lord and be sensitive to His leading in our lives.

When you live in a world that is increasing exponentially, you have to be ready for change. In fact, it is probably true that most of us now expect change rather than stability in our world. Not so long ago, there were those telling us that change would shock our senses and disorient us.

As commentator Mark Steyn points out, we developed a whole intellectual class of worriers. He says:

*The Western world has delivered more wealth and more comfort to more of its citizens than any other civilization in history, and in return we've developed a great cult of worrying. You know the classics of the genre: In 1968, in his bestselling book *The Population Bomb*, the eminent scientist Paul Ehrlich declared: “In the 1970s the world will undergo famines—hundreds of millions of people are going to starve to death.” In 1972, in their landmark study *The Limits to Growth*, the Club of Rome announced that the world would run out of gold by 1981, of mercury by 1985, tin by 1987, zinc by 1990, petroleum by 1992, and copper, lead and gas by 1993. [\[13\]](#)*

Obviously none of that happened. But we shouldn't dismiss the potential impact of exponential growth, but learn to be more careful in our predictions.

I believe one of the greatest challenges for Christians will come from the information explosion. Not only are we inundated with facts, figures, and statistics, but we must

also confront various philosophies, worldviews, and religions. It is absolutely essential that Christians develop discernment. We must work to evaluate everything we see, read, and hear from a Christian worldview.

This is one of the foundational goals of Probe Ministries. We are dedicated to helping you to think biblically about every area of life. I would encourage you to visit the Probe website (www.probe.org) to read other articles. You can also get a podcast of this program or any other program, and even sign up for the *Probe Alert*.

Kerby Anderson discusses some of the trends in our rapidly changing world, and calls for Christians to 'understand the times' with discernment. We live in a world of change. And as I have discussed above, many of these changes are not linear but exponential. May all of us be found faithful in speaking biblical truth to a culture in the midst of change.

Consumerism – A Biblical Perspective

Kerby Anderson examines ways in which a consumerist mindset is a concern for both society and the church. He concludes by providing a biblical perspective.

Consumerism is a concern within society and within the church. So I would like to analyze both of these areas of concern by citing books that address this issue. The classic secular book on this subject is *Affluenza: The All-Consuming Epidemic*.[\[1\]](#)

An excellent Christian book that deals with the topic of consumerism (in one of its chapters) is Michael Craven's book *Uncompromised Faith: Overcoming Our Culturalized Christianity*.[{2}](#)

What is consumerism? Many people use the terms *materialism* and *consumerism* interchangeably. But there is a difference. Consumerism is much more than mere materialism. It is a way of perceiving the world that has affected all of us (especially Americans)—young and old, rich and poor, believer and non-believer—in significant ways. Essentially it is a never-ending desire to possess material goods and to achieve personal success.

Others have defined consumerism as *having* rather than *being*.[{3}](#) Your worth and value are measured by what you have rather than by who you are. It is buying into a particular lifestyle in order to find your value, worth, and dignity. As Christians we should be defined by the fact that we are created in God's image and have intrinsic worth and dignity.

Even secular writers see the problems with consumerism. The writers of *Affluenza* say that it is a virus that "is not confined to the upper classes but has found its way throughout our society. Its symptoms affect the poor as well as the rich . . . *Affluenza* infects all of us, though in different ways."[{4}](#)

The authors go on to say that "the *Affluenza* epidemic is rooted in the obsessive, almost religious quest for economic expansion that has become the core principle of what is called the American dream."[{5}](#)

Affluenza is rooted in a number of key concepts. First, it is rooted in the belief that the measure of national progress can be measured by the gross domestic product. Second, it is rooted in the idea that each generation must do better economically than the previous generation.

The consequences of this are devastating to both the nation and individuals. We are living in a time when the economic realities should be restraining spending (both as a nation and as individuals). Instead, we have corporately and individually pursued a lifestyle of “buy now and pay later” in order to expand economically. As we have discussed in previous articles, this philosophy has not served us well.

In an attempt to find happiness and contentment by pursuing “the good life,” Americans have instead found it empty. Consumerism seems to promise fulfillment, but alas, it is merely an illusion. Consumerism does not satisfy.

Inverted Values and Changing Attitudes

Anyone looking at some of the social statistics for the U.S. might conclude that our priorities are out of whack. For example, we spend more on shoes, jewelry, and watches than on higher education. We spend much more on auto maintenance than on religious and welfare activities. And three times as many Americans buy Christmas presents for their pets than buy a present for their neighbors.[{6}](#)

Debt and waste also show skewed priorities. More Americans have declared personal bankruptcy than graduated from college. Our annual production of solid waste would fill a convoy of garbage trucks stretching halfway to the moon. We have twice as many shopping centers as high schools.[{7}](#)

Americans seem to be working themselves to death in order to pay for everything they own or want to buy. We now work more hours each year than do the citizens of any other industrial country, including Japan. And according to Department of Labor statistics, full-time American workers are putting in one hundred sixty hours more (essentially one month more) than they did in 1969.[{8}](#) And ninety-five percent of our workers say they wish they could spend more time with their

families. [{9}](#)

Americans do recognize the problem and are trying to simplify their lives. A poll by the Center for a New American Dream showed a change in attitudes and action. The poll revealed that eighty-five percent of Americans think our priorities are out of whack. For example, nearly nine in ten (eighty-eight percent) said American society is too materialistic. They also found that most Americans (ninety-three percent) feel we are too focused on working and making money. They also believed (ninety-one percent) that we buy and consume more than we need. More than half of Americans (fifty-two percent) said they have too much debt. [{10}](#)

The poll found that many Americans were taking steps to work less, even if that meant reducing their consuming. Nearly half of Americans (forty-eight percent) say they voluntarily made changes in their life in order to get more time and have a less stressful life. This increase in the number of self-proclaimed “down-shifters” suggests the beginning of a national change in priorities.

Perhaps Americans are coming to the realization that more consumer goods don't make them happy. Think back to the year 1957. That was the year that the program *Leave it to Beaver* premiered on television. It was also the year that the Russians shot Sputnik into space. That was a long time ago.

But 1957 is significant for another reason. It was that year that Americans described themselves as “very happy” reached a plateau. [{11}](#) Since then there has been an ever declining percentage of Americans who describe themselves that way even though the size of the average home today is twice what it was in the 1950s and these homes are filled with consumer electronics someone back then could only dream about.

Undermining the Family and Church

What has been the impact of consumerism? Michael Craven talks about how consumerism has undermined the family and the church.

The family has been adversely affected by the time pressures created by a consumer mentality. Family time used to be insulated to a degree from employment demands. That is no longer true. "We no longer hesitate to work weekends and evenings or to travel Sundays, for example, in order to make the Monday-morning meeting."[\[12\]](#) As we have already mentioned, Americans are working more hours than ever before. The signal that is being sent throughout the corporate world is that you must be willing to sacrifice time with your family in order to get ahead. And that is exactly what is taking place.

Sociologists have concluded that "since 1969 the time American parents spend with their children has declined by 22 hours per week."[\[13\]](#) Some have questioned this study because its estimate of the decline came from subtracting increased employment hours of parents from total waking hours. But I believe it makes the point that families are suffering from consumerism and this study parallels other studies that have looked at the decline in quality parent-child interaction at home.

The bottom line is this: Americans may talk about family values and quality time with their kids but their behavior demonstrates that they don't live those values. Frequently children and their needs are sacrificed on the altar of career success. The marketplace trumps family time more than we would like to think that it does.

The church has also been undermined by consumerism. Busy lifestyles and time pressures crowd out church attendance. Weekly church attendance has reached an all-time low in America. And even for those who try to regularly attend

church, attendance is sometimes hit-or-miss. Years ago I realized how difficult it was to teach a series in a Sunday School class because there was so little continuity in attendance from one week to the next.

Craven points out that those who are dissatisfied with a consumerist-created lifestyle turn to church for meaning and purpose. Unfortunately, they think that “by integrating a ‘little religion’ into their lives they will balance and perfect the lifestyle. Tragically, they do not realize it is not their lifestyle that is in need of salvation, it is their very souls.”[{14}](#)

Consumerism also affects the way we go about the Christian life. Religious consumerists add spiritual disciplines to their life in the same way they approach work (as a task to be fulfilled with measurable goals). In the end, spiritual activity becomes one more item on a to-do list.

Craven reminds us that Jesus Christ is not to be treated as one good among many. Jesus Christ should be the supreme Good and the source of all life.

Undermining the Community and Character

What has been the impact of consumerism? Craven talks about how consumerism has undermined community and how it has also undermined virtue and character. “With the increased priority given to the marketplace, there follows a decreased commitment to neighbors, community, and connections to extended family; children are displaced in pursuit of opportunities, and familial priorities become subverted to company demands.”[{15}](#)

This has an adverse impact on citizenship. People are no longer citizens but consumers. Citizens have duties and responsibilities to their fellow citizens. Consumers do not. They are merely partaking of what the consumer economy provides for them. Citizens care about others and their

community. Consumers only care about what the society can provide to them.

Christian philosopher Francis Schaeffer predicted that as society moved from the “death of God” to what today we can call the “death of truth” there would only be two things left: “personal peace and personal prosperity.” Schaeffer argued that once Americans accepted these values, they would sacrifice everything to protect their personal peace and affluence.[{16}](#)

Consumerism also undermines virtue and character. It “shifts the objective of human life away from cultivating virtue and character, knowing truth, and being content to an artificially constructed, idealized lifestyle that is continually reinforced through media, entertainment, and advertising.”[{17}](#)

With this view of life, things become more important than people. Having is more important than being. And it is a lifestyle that pursues distraction (sports, entertainment, hobbies, etc.) almost in an effort to keep from thinking about the real world and its circumstances.

As we have already noted, consumerism does not satisfy. In fact, it can be argued that a consumerist mentality puts us in an emotional place where we are perpetually discontent. We are unable to rest in that which is good because we always want more. This is made even more difficult in our world where advertising images provide a seemingly endless series of choices that are promoted to us as necessary in order to achieve the perfect life.

Michael Craven points out that when Christians talk about being content, this is often ridiculed as being willing to “settle for less” and even condemned as “lazy, defeatist, and even irresponsible.”[{18}](#) Instead we are spurred on by talk of “doing all things to the glory of God” which can be used to justify a consumerist mentality.

A Biblical Perspective on Materialism and Consumerism

We live in a culture that encourages us to buy more and more. No longer are we encouraged to live within our means. We are tempted to buy more than just the necessities and tempted to spend more on luxuries. The Bible warns us about this. Proverbs 21:17 says, "He who loves pleasure will become a poor man; He who loves wine and oil will not become rich."

In our lifetimes we have lots of money that flows through our hands, and we need to make wiser choices. Consider that a person who makes just \$25,000 a year will in his lifetime have a million dollars pass through his hands. The median family income in America is twice that. That means that two million dollars will pass through the average American family's hands.

A tragic aspect of consumerism is that there is never enough. There is always the desire for more because each purchase only satisfies for short while. Then there is the need for more and more. Essentially, it is the law of diminishing returns. Economists use a more technical term—the law of diminishing marginal return. Simply put, the more we get, the less it satisfies and the more we want.

Once again the Bible warns us about this. Haggai 1:5-6 says, "Now therefore, thus says the Lord of hosts, 'Consider your ways! You have sown much, but harvest little; you eat, but there is not enough to be satisfied; you drink, but there is not enough to become drunk; you put on clothing, but no one is warm enough; and he who earns, earns wages to put into a purse with holes.'"

We should also be responsible citizens. A tragic consequence of consumerism is what it does to the average citizen. James Kunstler, author of *The Geography of Nowhere*, believes we have "mutated from citizens to consumers." He says that "consumers have no duties or responsibilities or obligations to their

fellow consumers. Citizens do. They have the obligation to care about their fellow citizens and about the integrity of the town's environment and history."[\[19\]](#)

America was once a nation of joiners. Alexis de Tocqueville noted this in his book *Democracy in America*. Americans would join in all sorts of voluntary associations. But we seem to no longer be joiners but loners. Sure, there are still many people volunteering and giving their time. But much of this is "on the run" as we shuffle from place to place in our busy lives.

Christians are called to be the salt of the earth (Matthew 5:13) and the light of the world (Matthew 5:14-16). We are also called to be ambassadors for Christ (2 Corinthians 5:20). We must resist the temptations of consumerism that encourage us to focus on ourselves and withdraw from active involvement in society.

Rome and America – Comparing to the Ancient Roman Empire

Kerby Anderson looks at the comparisons between modern America and ancient Rome, i.e. the Roman Empire. Do Americans have a worldview more like ancient Romans than the biblical worldview spelled out in the Bible? In some ways, yes, and in other ways, not so much.

Similarities

The philosopher George Santayana once said: "Those who cannot remember the past are condemned to repeat it." To which I might add that those who remember Santayana's maxim also seem

condemned to repeat the phrase.

✘ Ask anyone if they see similarities between Rome and America, and they are likely to respond with a resounding, “Yes!” But I have also found that people who see similarities between Rome and America see different similarities. Some see similarities in our moral decay. Others see similarities in pride, arrogance, and hubris. But all seem to agree that we are repeating the mistakes of the past and need to change our ways.

In his book *Are We Rome?*, Cullen Murphy argues that there are many similarities between the Roman Empire and America.^{1} But he also believes that the American national character couldn't be more different from Rome. He believes those differences can help us avoid Rome's fate.

Let's begin by looking at some of the political, geographical, and demographic similarities.^{2}

1. Dominant powers: “Rome and America are the most powerful actors in their world, by many orders of magnitude. Their power includes both military might and the ‘soft power’ of language, culture, commerce, technology, and ideas.”

2. Approximately equal in size: “Rome and America are comparable in physical size—the Roman Empire and its Mediterranean lake would fit inside the three million square miles of the Lower Forty-eight states, though without a lot to spare.”

3. Global influence: “Both Rome and America created global structures—administrative, economic, military, cultural—that the rest of the world and their own citizens came to take for granted, as gravity and photosynthesis are taken for granted.”

4. Open society: “Both are societies made up of many peoples—open to newcomers, willing to absorb the genes and lifestyles and gods of everyone else, and to grant citizenship

to incoming tribes from all corners of the earth.”

5. Culturally similar: “Romans and Americans can’t get enough of laws and lawyers and lawsuits. . . . They relish the ritual humiliation of public figures: Americans through comedy and satire, talk radio and Court TV; the Romans through vicious satire, to be sure, but also, during the republic, by means of the *censorial nota*, the public airing, name by name, of everything great men of the time should be ashamed of.”

6. Chosen people: “Both see themselves as chosen people, and both see their national character as exceptional.”

While there are many similarities, there are also profound differences between Rome and America. Before we look at the six major parallels that Murphy talks about, we need to remind ourselves that there are many distinct differences between Rome and America.

Differences

It is no real surprise that people from different political and religious perspectives see similarities between Rome and America. While some see similarities in moral decay, others see it in military might or political corruption. Although there are many similarities between Rome and America, there are some notable differences.

Cullen Murphy points out these significant differences.[\[3\]](#)

1. Technological advancement: “Rome in all its long history never left the Iron Age, whereas America in its short history has already leapt through the Industrial Age to the Information Age and the Biotech Age.”

2. Abundance: “Wealthy as it was, Rome lived close to the edge; many regions were one dry spell away from famine. America enjoys an economy of abundance, ever surfeit; it must

beware the diseases of overindulgence.”

3. Slavery: “Rome was always a slaveholding polity with the profound moral and social retardation that this implies; America started out as a slaveholding polity and decisively cast slavery aside.”

4. Government: “Rome emerged out of a city-state and took centuries to let go of a city-state’s method of governance; America from early on began to administer itself as a continental power.”

5. Social classes: “Rome had no middle class as we understand the term, whereas for America the middle class is the core social fact.”

6. Democracy: “Rome had a powerful but tiny aristocracy and entrenched ideas about the social pecking order; even at its most democratic, Rome was not remotely as democratic as America at its least democratic, under a British monarch.”

7. Entrepreneurship: “Romans looked down upon entrepreneurship, which Americans hold in the highest esteem.”

8. Economic dynamism: “Rome was economically static; America is economically transformative.”

9. Technological development: “For all its engineering skills, Rome generated few original ideas in science and technology; America is a hothouse of innovation and creativity.”

10. Social equality: “On basic matters such as gender roles and the equality of all people, Romans and Americans would behold one another with disbelief and distaste.”

While it is true that Rome and America have a vast number of similarities, we can also see there are significant differences between the two. We therefore need a nuanced view of the parallels between the two civilizations and recognize that these differences may be an important key in

understanding the future of the United States.

Six Parallels

Murphy sees many parallels between the Roman Empire and America in addition to the above.^{4} The following are larger, more extensive, parallels.

The first parallel is perspective. It actually involves “the way Americans see America; and more to the point, the way the tiny, elite subset of Americans who live in the nation’s capital see America—and see Washington itself.”

Like the Romans, Americans tend to see themselves as more important than they are. They tend to have an exaggerated sense of their own presence in the world and its ability to act alone.

A second parallel involves military power. Although there are differences, some similarities stand out. Both Rome and America start to run short of people to sustain their militaries and began to find recruits through outside sources. This is not a good long-run solution.

A third parallel can be lumped under the term privatization. “Rome had trouble maintaining a distinction between public and private responsibilities.” America is currently in the midst of privatizing functions that used to be public tasks.

A fourth parallel concerns the way Rome and America view the outside world. In a sense, this is merely the flip side of the first parallel. If you believe your country is exceptional, you tend to devalue others. And more importantly, you tend to underestimate another nation’s capabilities. Rome learned this in A.D. 9 when three legions were ambushed by a smaller German force and annihilated.^{5} The repercussions were significant.

The question of borders is a fifth parallel. The boundary of

Rome “was less a fence and more a threshold—not so much a firm line fortified with ‘Keep Out’ signs as a permeable zone of continual interaction.” Compare that description to our border with Mexico, and so can see many similarities.

A final parallel has to do with size and complexity. The Roman Empire got too big physically and too complex to manage effectively. The larger a country or civilization, the more “it touches, and the more susceptible it is to forces beyond its control.” To use a phrase by Murphy: “Bureaucracy is the new geography.”[{6}](#)

Cullen Murphy concludes his book by calling for greater citizen engagement and for us to promote a sense of community and mutual obligation. The Roman historian Livy wrote, “An empire remains powerful so long as its subjects rejoice in it.” America is not beyond repair, but it needs to learn the lessons from the Roman Empire.

Decline of the Family

What about the moral decline of Rome? Do we see parallels in America? I have addressed this in previous articles such as “[The Decline of a Nation](#)” and “[When Nations Die.](#)”[{7}](#) Let’s focus on the area of sexuality, marriage, and family.

In his 1934 book, *Sex and Culture*, British anthropologist Joseph Daniel Unwin chronicled the historical decline of numerous cultures, including the Roman Empire. He found that cultures that held to a strong sexual ethic thrived and were more productive than cultures that were “sexually free.”[{8}](#)

In his book *Our Dance Has Turned to Death*, Carl Wilson identifies the common pattern of family decline in civilizations like the Roman Empire.[{9}](#) It is significant how these seven stages parallel what is happening in America.

In the first stage, men ceased to lead their families in

worship. Spiritual and moral development became secondary. Their view of God became naturalistic, mathematical, and mechanical.

In the second stage, men selfishly neglected care of their wives and children to pursue material wealth, political and military power, and cultural development. Material values began to dominate thought.

The third stage involved a change in men's sexual values. Men who were preoccupied with business or war either neglected their wives sexually or became involved with lower-class women or with homosexuality. Ultimately, a double standard of morality developed.

The fourth stage affected women. The role of women at home and with children lost value and status. Women were neglected and their roles devalued. Soon they revolted to gain access to material wealth and also freedom for sex outside marriage. Women also began to minimize having sex relations to conceive children, and the emphasis became sex for pleasure.

In the fifth stage, husbands and wives competed against each other for money, home leadership, and the affection of their children. This resulted in hostility and frustration and possible homosexuality in the children. Many marriages ended in separation and divorce.

In the sixth stage, selfish individualism grew and carried over into society, fragmenting it into smaller and smaller group loyalties. The nation was thus weakened by internal conflict. The decrease in the birthrate produced an older population that had less ability to defend itself and less will to do so, making the nation more vulnerable to its enemies.

Finally, unbelief in God became more complete, parental authority diminished, and ethical and moral principles disappeared, affecting the economy and government. Because of

internal weakness and fragmentation, the society came apart.

We can see these stages play out in the decline of the Roman Empire. But we can also see them happening before our eyes in America.

Spiritual Decline

What about the spiritual decline in Rome and America? We can actually read about the spiritual decline in Rome in Paul's letter to the church in Rome. In the opening chapter he traces a progression of spiritual decline that was evident in the Hellenistic world of his time.

The first stage is when people turn from God to idolatry. Although God has revealed Himself in nature to all men so that they are without excuse, they nevertheless worship the creation instead of the Creator. This is idolatry. In the past, this took the form of actual idol worship. In our day, it takes the form of the worship of money or the worship of self. In either case, it is idolatry. A further example of this is a general lack of thankfulness. Although they were prospered by God, they were ungrateful. And when they are no longer looking to God for wisdom and guidance, they become vain and futile and empty in their imaginations. They no longer honor God, so their foolish hearts become darkened. In professing to be wise, they have become fools.

The second stage is when men and women exchange their natural use of sex for unnatural uses. Here Paul says those four sobering words, "God gave them over." In a society where lust-driven sensuality and sexual perversion dominate, God gives them over to their degrading passions and unnatural desires.

The third stage is anarchy. Once a society has rejected God's revelation, it is on its own. Moral and social anarchy is the natural result. At this point God has given the sinners over to a depraved mind and so they do things which are not proper.

This results in a society which is without understanding, untrustworthy, unloving, and unmerciful.

The final stage is judgment. God's judgment rightly falls upon those who practice idolatry and immorality. Certainly an eternal judgment awaits those who are guilty, but a social judgment occurs when God gives a nation over to its sinful practices.

Notice that this progression is not unique to the Hellenistic world the apostle Paul was living in. The progression from idolatry to sexual perversion to anarchy to judgment is found throughout history.

In the times of Noah and Lot, there was the idolatry of greed, there was sexual perversion and promiscuity, there was anarchy and violence, and finally there was judgment. Throughout the history of the nation of Israel there was idolatry, sexual perversion, anarchy (in which each person did what was right in his own eyes), and finally judgment.

Are there parallels between Rome and America? I have quoted from secular authors, Christian authors, and a writer of much of the New Testament. All seem to point to parallels between Rome and America.

Tough Economic Times

The Bailout

Anyone watching the news or looking at their checking account knows that we are in for some tough economic times. I want to spend some time looking at how we arrived at this place and set forth some biblical principles that we collectively and individually need to follow.

Who would have imagined a year ago we would be talking about spending such enormous amounts of money on a bailout? The first bailout was for \$700 billion. When these numbers are so big, we lose all proportion of their size and potential impact. So let me use a few comparisons from a recent *Time* magazine article to make my point.[\[1\]](#)

If we took \$700 billion and gave it to every person in America, they would receive a check for \$2,300. Or if we decided to give that money instead to every household in America, they would receive \$6,200.

What if we were able to use \$700 billion to fund the government for a year? If we did so, it would fully fund the Defense Department, the State Department, the Treasury, the Department of Education, Veterans Affairs, the Department of the Interior, and NASA. If instead we decided to pay off some of the national debt, it would retire seven percent of that

debt.

Are you a sports fan? What if we used that money to buy sports teams? This is enough money to buy every NFL team, every NBA team, and every Major League Baseball team. But we would have so much left over that we could also buy every one of these teams a new stadium. And we would still have so much money left over that we could pay each of these players \$191 million for a year.

Of course this is just the down payment. When we add up all the money for bailouts and the economic stimulus, the numbers are much larger (some estimate on the order of \$4.6 trillion).

Jim Bianco (of Bianco Research) crunched the inflation adjusted numbers.[\[2\]](#) The current bailout actually costs more than all of the following big budget government expenditures: the Marshall Plan (\$115.3 billion), the Louisiana Purchase (\$217 billion), the New Deal (\$500 billion [est.]), the Race to the Moon (\$237 billion), the Savings and Loan bailout (\$256 billion), the Korean War (\$454 billion), the Iraq war (\$597 billion), the Vietnam War (\$698 billion), and NASA (\$851.2 billion).

Even if you add all of this up, it actually comes to \$3.9 trillion and so is still \$700 billion short (which incidentally is the original cost of one of the bailout packages most people have been talking about).

Keep in mind that these are inflation-adjusted figures. So you can begin to see that what has happened this year is absolutely unprecedented. Until you run the numbers, it seems like Monopoly money. But the reality is that it is real money that must either be borrowed or printed. There is no stash of this amount of money somewhere that Congress is putting into the economy.

What Caused the Financial Crisis?

What caused the financial crisis? Answering that question in a few minutes may be difficult, but let me give it a try.

First, there was risky mortgage lending. Some of that was due to government influence through the Community Reinvestment Act which encouraged commercial banks and savings associations to loan money to people in low-income and moderate-income neighborhoods. And part of it was due to the fact that some mortgage lenders were aggressively pushing subprime loans. Some did this by fraudulently overestimating the value of the homes or by overstating the lender's income. When these people couldn't pay on their loan, they lost their homes (and we had a record number of foreclosures).

Next, the lenders who pushed those bad loans went bankrupt. Then a whole series of dominoes began to fall. Government sponsored enterprises like Fannie Mae and Freddie Mac as well as financial institutions like Bear Stearns, Lehman Brothers, Merrill Lynch and AIG began to fail.

As this was happening, commentators began to blame government, the financial institutions, Wall Street, and even those who obtained mortgages. Throughout the presidential campaign and into 2009 there was a cry that this was the result of shredded consumer protections and deregulation.

So is the current crisis a result of these policies? Is deregulation the culprit? Kevin Hassett has proposed a simple test of this view.[\[3\]](#) He points out that countries around the world have very different regulatory structures. Some have relatively light regulatory structures, while others have much more significant intrusion into markets.

If deregulation is the problem, then those countries that have looser regulations should have a greater economic crisis. But that is not what we find. If you plot the degree of economic

freedom of a country on the x-axis and the percent of change in the local stock market on the y-axis, you find just the opposite of that prediction.

The correlation is striking. Draw a line from countries with low economic freedom (like China and Turkey) to countries with greater economic freedom (like the United States) and you will notice that most of the countries hug the line. Put another way, the regression line is statistically significant.

If the crisis were a result of deregulation, then the line should be downward sloping (meaning that countries that are freer economically had a biggest collapse in their stock markets). But the line slopes up. That seems to imply that countries that are economically free have suffered less than countries that are not. While it may be true that a single graph and a statistical correlation certainly does not tell the whole story, it does suggest that the crisis was not due to deregulation.

The End of Prosperity

It is interesting that as the financial crisis was unfolding, a significant economic book was coming on the market. The title of the book is *The End of Prosperity*.[\[4\]](#)

Recently I interviewed Stephen Moore with the *Wall Street Journal*. He is the co-author with Arthur Laffer and Peter

Tanous of *The End of Prosperity*. The book provides excellent documentation to many of the economic issues that I have discussed in the past but also looks ahead to the future.

The authors show that, contrary to conventional wisdom, the middle class has been doing better in America. They show how people in high tax states are moving to low tax states. And they document the remarkable changes in Ireland due to lowering taxes. I have talked about some of these issues in previous articles and in my radio commentaries. Their book provides ample endnotes and documentation to buttress these conclusions.

What is most interesting about the book is that it was written before the financial meltdown of the last few months. Those of us who write books have to guess what circumstances will be when the book is finally published. These authors probably had less of a lag time, but I doubt any of them anticipated the economic circumstances that we currently find.

Arthur Laffer, in a column in the *Wall Street Journal*, believes that “financial panics, if left alone, rarely cause much damage to the real economy.”^{5} But he then points out that government could not leave this financial meltdown alone. He laments that taxpayers have to pay for these bailouts because homeowners and lenders lost money. He notes: “If the house’s value had appreciated, believe you me the overleveraged homeowners and the overly aggressive banks would never have shared their gain with the taxpayers.”

He is also concerned with the ability of government to deal with the problem. He says, “Just watch how Congress and Barney Frank run the banks. If you thought they did a bad job running the post office, Amtrak, Fannie Mae, Freddie Mac and the military, just wait till you see what they’ll do with Wall Street.”

The reason the authors wrote *The End of Prosperity* was to set

forth what has worked in the past as a prescription for the future. They were concerned that tax rates were headed up and not down, that the dollar is falling, and that America was turning it back on trade and globalization. They also were concerned that the federal budget was spiraling out of control and that various campaign promises (health care, energy policy, environmental policy) would actually do more harm than good.

One of their final chapters is titled “The Death of Economic Sanity.” They feared that the current push toward more governmental intervention would kill the economy. While they hoped that politicians would go slow instead of launching an arsenal of economy killers, they weren’t too optimistic. That is why they called their book *The End of Prosperity*.

The Future of Affluence

Let’s see what another economist has to say. The Bible tells us that there is wisdom in many counselors (Proverbs 15:22). So when we see different economists essentially saying the same thing, we should pay attention.

Robert Samuelson, writing in *Newsweek* magazine, talks about “The Future of Affluence.”^{6} He begins by talking about the major economic dislocations of the last few months:

“Government has taken over mortgage giants Fannie Mae and Freddie Mac. The Treasury has made investments in many of the nation’s major banks. The Federal Reserve is pumping out \$1 trillion to stabilize credit markets. U.S. unemployment is at 6.1 percent, up from a recent low of 4.4 percent, and headed toward 8 percent, by some estimates.”

Samuelson says that a recovery will take place but we may find it unsatisfying. He believes we will lapse into a state of “affluent deprivation.” By that he doesn’t mean poverty, but

he does mean that there will be a state of mind in which people will feel poorer than they feel right now.

He says that the U.S. economy has benefited for roughly a quarter century “from the expansionary side effects of falling inflation—lower interest rates, greater debt, higher personal wealth—to the point now that we have now overdosed on its pleasures and are suffering a hangover.” Essentially, prosperity bred habits, and many of these habits were bad habits. Personal savings went down, and debt and spending went up.

Essentially we are suffering from “affluenza.” Actually that is the title of a book published many years ago to define the problem of materialism in general and consumerism in particular.

The authors say that the virus of affluenza “is not confined to the upper classes but has found its ways throughout our society. Its symptoms affect the poor as well as the rich . . . affluenza infects all of us, though in different ways.”^[7] The authors go on to say that “the affluenza epidemic is rooted in the obsessive, almost religious quest for economic expansion that has become the core principle of what is called the American dream.”

Anyone looking at some of the social statistics for the U.S. might conclude that our priorities are out of whack. We spend more on shoes, jewelry, and watches than on higher education. We spend much more on auto maintenance than on religious and welfare activities. We have twice as many shopping centers as high schools.

The cure for the virus affluenza is a proper biblical perspective toward life. Jesus tells the parable of a rich man who decides to tear down his barns and build bigger ones (Luke 12:18). He is not satisfied with his current situation, but is striving to make it better. Today most of us have adjusted to

a life of affluence as normal and need to actively resist the virus of affluenza.

Squanderville

Warren Buffett tells the story of two side-by-side islands of equal size: Thriftville and Squanderville.^{8} On these islands, land is a capital asset. At first, the people on both islands are at a subsistence level and work eight hours a day to meet their needs. But the Thrifts realize that if they work harder and longer, they can produce a surplus of goods they can trade with the Squanders. So the Thrifts decide to do some serious saving and investing and begin to work sixteen hours a day. They begin exporting to Squanderville.

The people of Squanderville like the idea of working less. They can begin to live their lives free from toil. So they willingly trade for these goods with “Squanderbonds” that are denominated in “Squanderbucks.”

Over time, the citizens of Thriftville accumulate lots of Squanderbonds. Some of the pundits in Squanderville see trouble. They foresee that the Squanders will now have to put in double time to eat and pay off their debt.

At about the same time, the citizens of Thriftville begin to get nervous and wonder if the Squanders will make good on their Squanderbonds (which are essentially IOUs). So the Thrifts start selling their Squanderbonds for Squanderbucks. Then they use the Squanderbucks to buy Squanderville land. Eventually the Thrifts own all of Squanderville.

Now the citizens of Squanderville must pay rent to live on the land which is owned by the Thrifts. The Squanders feel like they have been colonized by purchase rather than conquest. And they also face a horrible set of circumstances. They now must not only work eight hours in order to eat, but they must work additional hours to service the debt and pay Thriftville rent

on the land they sold to them.

Does this story sound familiar? It should. Squanderville is America.

Economist Peter Schiff says that the United States has “been getting a free ride on the global gravy train.” He sees other countries starting to reclaim their resources and manufactured goods. As a result, Americans are getting priced out of the market because these other countries are going to enjoy the consumption of goods that Americans previously purchased.

He says: “If America had maintained a viable economy and continued to produce goods instead of merely consuming them, and if we had saved money instead of borrowing, our standard of living could rise with everybody else’s. Instead, we gutted our manufacturing, let our infrastructure decay, and encouraged our citizens to borrow with reckless abandon.”[\[9\]](#)

It appears we have been infected with the virus of affluenza. The root problem is materialism that often breeds discontent. We want more of the world and its possessions rather than more of God and His will in our lives. What a contrast to what Paul says in Philippians where he counts all things to be loss (3:7-8) and instead has learned to be content (4:11). He goes on to talk about godliness with contentment in 1 Timothy 6:6-7. Contentment is an effective antidote to materialism and the foundation to a proper biblical perspective during these tough economic times.

Blessings and Judgment

Kerby Anderson answers some intriguing questions: Is God blessing America? Will God bring judgment against America? What are the biblical principles of blessing and judgment we find in the Bible concerning the nation of Israel? Do any of them apply to our nation?

Is God blessing America? Will God bring judgment against America? These are questions I often hear, and yet rarely do we hear good answers to these questions. Part of the reason is that Christians haven't really studied the subject of blessings and judgment.

In this article we deal with this difficult and controversial subject. While we may not be able to come to definitive answers to all of these questions, I think we will have a better understanding of what blessings and judgment are from a biblical perspective.

When we think about this topic, often we are in two minds. On one hand, we believe that God is on our side and blessing us. After the attacks on 9/11, for example, we launched a war on terror and were generally convinced that God was on our side. At least we hoped that He was. Surely God could not be on the side of the terrorists.

On the other hand, we also wonder if God is ready to judge America. Given the evils of our society, isn't it possible that God will judge America? Haven't we exceeded what other nations have done that God has judged in the past?

In his book *Is God on America's Side?*, Erwin Lutzer sets forth seven principles we can derive from the Old Testament about blessing and cursing. We will look at these in more depth below. But we should first acknowledge that God through His prophets clearly declared when he was bringing judgment. In those cases, we have special revelation to clearly show what God was doing. We do not have Old Testament prophets today, but that doesn't stop Christians living in the church age from claiming (often inaccurately) that certain things are a judgment of God.

In the 1980s and 1990s we heard many suggest that AIDS was a judgment of God against homosexuality. In my book *Living Ethically In the 90s* I said that it did not look like a judgment from God. First, there were many who engaged in homosexual behavior who were not stricken with AIDS (many male

homosexuals and nearly all lesbians were AIDS-free). Second, it struck many innocent victims (those who contracted the disease from blood transfusions). Was AIDS a judgment of God? I don't think so.

When Hurricane Katrina struck New Orleans in 2005, people called into [my talk show](#) suggesting this was God's judgment against the city because of its decadence. But then callers from the Gulf Coast called to say that the hurricane devastated their communities, destroying homes, businesses, and churches. Was God judging the righteous church-going people of the Gulf Coast? Was Hurricane Katrina a judgment of God? I don't think so.

In this article we are going to look at blessings and judgments that are set forth by God in the Old Testament so that we truly understand what they are.

Seven Principles (Part 1)

In his book *Is God on America's Side?* Erwin Lutzer sets forth seven principles we can derive from the Old Testament about blessing and cursing. The first principle is that God can both bless and curse a nation.[{1}](#)

When we sing "God Bless America" do we really mean it? I guess part of the answer to that question is what do most Americans mean by the word "God"? We say we believe in God, but many people believe in a god of their own construction. In a sense, most Americans embrace a god of our civil religion. This is not the God of the Bible.

R.C. Sproul says the god of this civil religion is without power: "He is a deity without sovereignty, a god without wrath, a judge without judgment, and a force without power."[{2}](#) We have driven God from the public square, but we bring him back during times of crisis (like 9/11) but he is only allowed off the reservation for a short period of time.

We sing "God Bless America" but do we mean it? Nearly every political speech and every "State of the Union" address ends with the phrase, "May God bless America." But what importance do we place in that phrase?

Contrast this with what God said in the Old Testament. God gave Israel a choice of either being blessed or being cursed. "See, I am setting before you today a blessing and a curse—the blessing, if you obey the commandments of the Lord your God, which I command you today; and the curse, if you do not obey the commandments of the Lord your God, but turn aside from the way that I am commanding you today, to go after other gods that you have not known" (Deuteronomy 11:26-28).

We should first acknowledge that Israel was unique because it had a covenant with God. America does not have a covenant with God. But it does still seem as if the principle of blessing and cursing can apply to nations today.

A second principle is that God judges nations based on the amount of light and opportunity they are given.^{3} The Old Testament is a story of Israel. Other nations enter the story when they connect with Israel. Because Israel had a unique relationship with God, the nation was judged more strictly than its neighbors.

God was more patient with the Canaanites—it took four hundred years before their "cup of iniquity" was full, and then judgment fell on them. Likewise, Paul points out (Romans 2:12-15) that in the end time, God would individually judge Jews and Gentiles by the amount of light they had when they were alive.

A nation that is given the light of revelation will be held to greater account than a nation that is not.

Seven Principles (Part 2)

In his book *Is God on America's Side?* Erwin Lutzer sets forth seven principles we can derive from the Old Testament about blessing and cursing. The third principle is that God sometimes uses exceedingly evil nations to judge those that are less evil.[{4}](#)

Israel was blessed with undeserved opportunities, yet were disobedient. God reveals to Isaiah that God would use the wicked nation of Assyria to judge Israel. "Ah, Assyria, the rod of my anger; the staff in their hands is my fury! Against a godless nation I send him, and against the people of my wrath I command him, to take spoil and seize plunder, and to tread them down like the mire of the streets" (Isaiah 10:5-6). In another instance, God reveals to Habakkuk that He was raising up the Chaldeans to march through the land, plundering, killing, and stealing (Habakkuk 1:5-11).

As I mentioned above, Christians are often of two minds when they think about America. On the one hand they believe America is a great country. We have been willing to rebuild countries after war or natural disaster. American missionaries travel around the world. Christians broadcast the gospel message around the world.

On the other hand, America is a decadent country. We are the leading exporters of pornography and movies that celebrate sex, violence, and profanity. We have aborted more than 50 million unborn babies. Our judicial system banishes God from public life. Will God use another nation to judge America?

A fourth principle is that when God judges a nation, the righteous suffer with the wicked.[{5}](#) A good example of this can be found in the book of Daniel. When God brought the Babylonians against Judah, Daniel and his friends were forced to accompany them.

We also see a parallel to this in manmade and natural disasters. Whether it is a terrorist attack or a hurricane or tsunami, we see that believers and nonbelievers die together. We live in a fallen world among fallen people. These actions (whether brought about by moral evil or physical evil) destroy lives and property in an indiscriminate way.

A fifth principle is that God's judgments take various forms.[{6}](#) Sometimes it results in the destruction of our families. We can see this in God's pronouncement in Deuteronomy 28:53-55. When the Israelites were forced to leave their homes to go to foreign lands, the warnings were fulfilled. Today we may not be forced into exile, but we wonder if "God is judging our families just the same. He is judging us for our immorality."

In Deuteronomy 28:36-37, "The Lord will bring you and your king whom you set over you to a nation that neither you nor your fathers have known. And there you shall serve other gods of wood and stone." When the ten tribes of Israel were exiled to Assyria, they were assimilated into the pagan culture and never heard from again.

Seven Principles (Part 3)

The sixth principle is that in judgment, God's target is often His people, not just the pagans among them.[{7}](#)

Yes, it is true that God judges the wicked, but sometimes the real purpose of present judgments has more to do with the righteous than the wicked. Not only do we see this in the Old Testament, we also see this principle in the New Testament. 1 Peter 4:17-18 says: "For it is time for judgment to begin at the household of God; and if it begins with us, what will be the outcome for those who do not obey the gospel of God? And 'If the righteous is scarcely saved, what will become of the ungodly and the sinner?'"

This raises a good question. If judgment begins at the house of God, is the church today under judgment? Have Christians become too worldly? Have Christians become too political and thus depend on government rather than on God? Have Christians become too materialistic? Someone has said we should change the motto on our coins from "In God we trust" to "In gold we trust."

A seventh and final principle is that God sometimes reverses intended judgments.^{8} We must begin with an observation. God's blessing on any nation is undeserved. There is always sin and evil in the land. When God blesses us, either individually or corporately, it is an evidence of God's grace.

Sometimes God calls for judgment but then spares a nation. A good example of that can be found in the life of Jonah. God called him to that city to preach repentance for their sins. He didn't want to go because it was the capital city of the Assyrians who had committed genocide against Israel. But when Jonah finally obeyed God, the city was saved from judgment.

God also used Old Testament prophets to preach to Israel. But the people didn't have a heart to care. Consider the ministry of Micah and Jeremiah. Actually, Micah preached a hundred years before Jeremiah and warned Judah that her "wound is incurable." A century later, Jeremiah is brought before the priests and false prophets who want him killed. After hearing him, they appeal to the preaching of Micah (Jeremiah 16:19). King Hezekiah listened to Micah's words and sought God who withheld judgment.

Erwin Lutzer gives another example from eighteenth century England. The country was in decline, but God reversed the trend through the preaching of John Wesley and George Whitefield.

Conclusion

I would like to conclude by returning to the questions about whether God is blessing or judging our nation.

First, we must acknowledge that no nation can claim that God is on its side. In fact, there is a long and sorry history of nations that have claimed this. And the “God is on our side mentality” has done much harm throughout the history of the church.

Kim Riddlebarger: “Instead of letting God be God, our sinful pride leads us to make such pronouncements that are not ours to make. In these cases, God is not sovereign, he is a mascot.”^{9} As a nation, we must not claim that God is on our side.

This is also true in the political debates we have within this nation. Richard Land in his book, *The Divided States of America*, says: “What liberals and conservatives both are missing is that America has been blessed by God in unique ways—we are not just another country, but neither are we God’s special people. I do not believe that America is God’s chosen nation. God established one chosen nation and people: the Jews. We are not Israel. We do not have ‘God on our side.’ We are not God’s gift to the world.”^{10}

This brings us back to the famous quote by Abraham Lincoln who was asked if God was on the side of the Union forces or the Confederate forces. He said: “I do not care whether God is on my side; the important question is whether I am on God’s side, for God is always right.”

Second, we should be careful not to quickly assume that a disease or a disaster is a judgment of God. Above I gave examples of people wrongly assuming that AIDS or Hurricane Katrina was a judgment of God.

We can take comfort in knowing that this isn’t just a problem

in the twenty-first century. Apparently it was even a problem in the first century. The tower of Siloam fell and killed a number of people. It appears that those around Jesus thought it was a punishment for their sins. He counters this idea by saying: "Or do you suppose that those eighteen on whom the tower in Siloam fell and killed them were *worse* culprits than all the men who live in Jerusalem? I tell you, no, but unless you repent, you will all likewise perish" (Luke 13:4-5).

We should wisely refrain from too quickly labeling a disease or disaster as a judgment of God. But we should take to heart the words of Jesus and focus on our need for salvation and repentance.

American Bank Bailout

Where is the Bailout Money?

The bailout has been a topic of conversation at nearly every social gathering I am been at in the last few weeks. And most of the time one question surfaces, where is the bailout money? The reason taxpayers are asking that is due to a news story that came out before Christmas stating that the largest banks can't exactly track how they are spending the money.

Now I did have one lawyer explain to me that often these funds are placed in a pool so it isn't easy to track them. And I will give the banks some slack on that since I realize that is probably the case. But let's think about this for a moment.

If I were asking for a loan from the bank, wouldn't you expect them to ask me where the money is going? And if I needed an additional loan, wouldn't you expect the bank to want a detailed history of what I did with the previous loan? Now keep that in the back of your mind as you hear what some of the bank officers have been saying.

A spokesman for JPMorgan Chase said: "We've lent some of it. We've not lent some of it. We're not given any accounting of, 'Here's how we're doing it.'"

A spokesman for SunTrust Banks said: "We're not providing dollar-in, dollar-out tracking." By the way, they have already received \$3.5 billion in taxpayer dollars.

A spokesman for Regions Financial Corp said: "We manage our capital in the aggregate." They also have received \$3.5 billion from the financial bailout.

I don't know about you, but that doesn't inspire much confidence in me. Remember that lawmakers did bring bank

executives to Capitol Hill and encouraged them to lend the money and not hoard it or spend it on corporate bonuses. It appears that some have, but there does not seem to be any negative consequences for doing so.

One of my recent guests [on the [Point of View](#) radio program] is Representative Scott Garrett (a member of the House Financial Services Committee) who asks: "Where is the money going to go to? How is it going to be spent? When are we going to get a record on it?" These all sound like good questions that need to be answered.

What Caused the Financial Crisis?

What caused the financial crisis? We have heard lots of accusations and criticisms, but it is hard to know who to believe. President-elect Barack Obama said throughout the presidential campaign that it was deregulation and a conservative approach to economics that was to blame. He said: "Eight years of policies that have shredded consumer protections, loosened oversight and regulation, and encouraged outsized bonuses to CEOs while ignoring middle-class American have brought us to the most serious financial crisis since the Great Depression."

So is the current crisis a result of these policies? Is deregulation the culprit? Kevin Hassett proposes a simple test of this view. He points out that countries around the world have very different regulatory structures. Some have relatively light regulatory structures, while others have much more significant intrusion into markets.

If the premise by Barack Obama is correct, then those countries that have looser regulations should have a greater economic crisis. But that is not what we find. If you plot the degree of economic freedom of a country on the x-axis and the percent of change in the local stock market on the y-axis, you find just the opposite of what Barack Obama states.

The correlation is striking. Draw a line from countries with low economic freedom (like China and Turkey) to countries with greater economic freedom (like the United States) and you will notice that most of the countries hug the line. Put another way, the regression line is statistically significant.

If Barack Obama is correct the line should be downward sloping (meaning that countries that are freer economically had a biggest collapse in their stock markets). But the line slopes up. That seems to imply that countries that are economically free have suffered less than countries that are not. Of course, a single graph and a statistical correlation certainly does not tell the whole story. But it is interesting that the current data seems to prove just the opposite of what Barack Obama has been arguing.

Cost of the Bailout

How much is that bailout going to cost us? Nobody seems to know, but even when I try to give some numbers for it, it doesn't compute. So I was encouraged to see that someone took the time to put the current bailout numbers in perspective.

Barry Ritholtz is a financial blogger and Wall Street analyst. He has found (as I have found) that people have a hard time comprehending the dollar amounts. While doing research for his book, *Bailout Nation*, he needed some way to put this into proper historical perspective. He says that if you add the latest Citi bailout, the total cost now exceeds \$4.6 trillion dollars. By the way, I have seen numbers much larger than that (which may include loan guarantees which may not actually end up costing us). But what does \$4.6 trillion dollars look like?

Jim Bianco (of Bianco Research) crunched the inflation adjusted numbers. The current bailout actually costs more than all of the following big budget government expenditures. The Marshall Plan (\$115.3 billion), the Louisiana Purchase (\$217 billion), the New Deal (\$500 billion est), the Race to the

Moon (\$237 billion), the Savings and Loan bailout (\$256 billion), the Korean War (\$454 billion), the Iraq war (\$597 billion), the Vietnam War (\$698 billion), and NASA (\$851.2 billion).

Even if you add all of this up, it actually comes to \$3.9 trillion and so is still \$700 billion short (which incidentally is the original cost of one of the bailout packages most people have been talking about).

Keep in mind that these are inflation-adjusted figures. So you can begin to see that what has happened just in the last few months is absolutely unprecedented. But until you run the numbers, it seems like Monopoly money. But the reality is that it is real money that must either be borrowed or printed. There is no stash of this money somewhere that Congress is putting into the economy.

The current economic meltdown is significant, but the solution that members of Congress and financial experts on Wall Street are offering is terribly expensive.

Government Ownership of Banks?

One of the lingering questions about the bailout is how long the government will have ownership of the banks. At the moment, the federal government is planning on purchasing \$250 billion worth of shares in American banks. Is it possible that government will hold the bank shares indefinitely? Terrence Jeffrey of CNSNews.com believes that this could be an unintended consequence. Let me explain.

While the law doesn't say that government can buy ownership interest in banks, it does allow purchases in "any financial instrument that the secretary, after consultation with the chairman of the Board of Governors of the Federal Reserve System, determines the purchase of which is necessary to promote financial market stability." This act also allows

“such actions as is necessary, that the secretary might deem.”

So how long can the treasury secretary hold these assets? Actually, the law sets no limits. A Treasury spokesman told CNSNews.com that “We can hold them for as long as we want.” Now, let’s be fair, Treasury Secretary Hank Paulson does not envision the government having a permanent ownership stake in various banks. But let’s also be realistic. He won’t be the treasury secretary next year.

The plan that was drafted envisions the government selling the stock back to the banks. It also prevents elected officials from using government ownership of the banks for their own political advantage. This oversight actually takes place through the Office of Thrift Supervision, the Office of the Comptroller of the Currency, the Federal Reserve, and the Federal Deposit Insurance Corporation.

Now the plan does allow banks to buy back its shares from the government in the first three years, if it can raise 25 percent of the value of the shares by selling stock. But these are subject to the approval of the primary bank regulator.

But the bottom line is this: banks are not guaranteed they can buy back their stock. Although Congress didn’t intend for government to permanently own banks, it is possible they may do so anyway.

Seven Hundred Billion

How much is \$700 billion? When these numbers are so big we lose all proportion of their size and potential impact. So let me use a few comparisons from a recent Time Magazine article to make my point.

If we took \$700 billion and gave it to every person in America, they would receive a check for \$2,300. Or if we decided to give that money instead to every household in America, they would receive \$6,200.

Here's another idea, if we took that money and decided to start paying the income taxes for each American, it would pay the income taxes for every American who makes \$500,000 or less a year.

Since gas prices have been high, what if we decided to use this money to buy gasoline for every car in America? If we did that, no one would have to pay for gas for the next 16 months.

What if we were able to use \$700 billion to fund the government for a year? If we did so, it would fully fund the Defense Department, the State Department, the Treasury, the Department of Education, Veterans Affairs, the Department of the Interior, and NASA. If instead we decided to pay off some of the national debt, it would retire seven percent of that debt.

Are you a sports fan? What if we used that money to buy sports teams? This is enough money to buy every NFL team, every NBA team, and every Major League Baseball team. But we would have so much left over that we could also buy every one of these teams a new stadium. And we would still have so much money left over that we could pay each of these players \$191 million for a year.

So how would \$700 billion stack up against the economies of various countries in the world? This amount of money would create the 17th largest economy in the world, roughly equal to the economy of the Netherlands.

Is \$700 billion a lot of money? Of course it is, and we all need to think about this the next time Congress votes to spend money. I'm Kerby Anderson, and that's my point of view.
