

Maximum Faith

May 31, 2011

How does God transform the lives of Christians? If you think the answer to that question is easy, perhaps you should talk with George Barna. Six years after beginning what he assumed would be a relatively typical research process that sought to better understand how God transforms people's lives, he discovered he had tackled a deeply challenging and amazingly revealing journey. The end product was his new book, *Maximum Faith*.

After lots of research and exhausting surveys, he was able to describe what he calls ten stop points on the journey to wholeness. Stop 1 is ignorance of the concept or existence of sin. Millions of people grow up oblivious to the fact that God exists and that we have a sin nature. Stop 2 is an awareness and indifference to sin. As life goes on, people gain exposure to the idea of sin, but many do not accept it as valid or significant. Stop 3 is concerned about the implications of personal sin. And stop 4 is a decision to confess sin and ask Jesus Christ to be savior. It is worth noting that about 2/3rd of Americans are stuck in one of these four stops.

Stop 5 is a commitment to faith activities. A believer gets involved in church activities (church service, Sunday School classes, etc.). Another quarter of Americans are at this stop. This means that nearly 90 percent of Americans are stuck at one of the first five stops and are not therefore not experiencing the other five stops that George Barna has identified.

Stop 6 is a prolonged period of spiritual discontent. Stop 7 is an experience of personal brokenness. Stop 8 is a decision to surrender and submit fully to God. Stop 9 is enjoying a profound intimacy with the love for God. And stop 10 is

experiencing a profound compassion and love for humanity.

It is worth noting that only a fraction of a percent find themselves in these last two stops. In general, Christians in America are not experiencing what God intends for them. Put another way, most Christians are captive to the culture and therefore unwilling to seek godliness. I'm Kerby Anderson, and that's my point of view.

Ominous Ruling from the UK

March 14, 2011

A landmark ruling in the U.K. will have a major impact on the future of foster care and adoption in that country. The High Court suggested that Christians with traditional beliefs on sexual ethics are unsuitable as foster care parents. And they went on to argue that gay rights trump religious beliefs and freedom of conscience.

A key lawyer in the case was Paul Diamond, a prominent Christian barrister in England. I have had him on my radio program on two occasions to talk about how ideas in the U.K. often make it to the U.S. He has noticed that our legal system is going down the same path as England and has wanted to warn us about this trend. What happens in the U.K. doesn't stay in the U.K. It crosses the Atlantic to our nation. Many justices are interested in trends in international law and work to implement those ideas in our opinions. And when the Supreme Court takes a break over the summer, many of the justices go over to Europe to study and lecture.

This current case has ominous implications for Christians in England and could eventually have an impact in this country. A

married couple (Eunice and Owen Johns) applied to be foster care parents in 2007. The Derby City Council blocked their application because the Johns were not willing to promote the practice of homosexuality to a young child. Both parties asked the High Court to rule on whether they could be foster parents.

The High Court Judges upheld an Equalities and Human Rights submission that children that might be in the care of the couple risk being “infected” (their word) by Christian moral beliefs. That stated that Christian beliefs on sexual ethics may be “inimical” to children. In other words, these Christian beliefs are harmful to children.

While it is true that this ruling merely applies to this particular couple, it signals that other Christians who hold to orthodox Christian views on sex, marriage, and family are likely to face difficulties in the future. This ruling will likely be applied to any Christian wanting to be a foster parent or adopt a child. And it is possible that some day in the future we may see a similar ruling in America. I’m Kerby Anderson, and that’s my point of view.

Psalms 8

April 22, 2011

If you study astronomy for very long, you can feel very small. We are a small planet in one solar system in one of many galaxies. Just consider some of the comments by scientists about our place in the universe.

Werner von Braun said: “We find that we live on an insignificant planet of a humdrum star lost in a galaxy tucked

away in some forgotten corner of a universe in which there are far more galaxies than people.”

Astronaut Neil Armstrong said he felt very small when he was in space. “It suddenly struck me that that tiny pea, pretty and blue, was the Earth. I put up my thumb and shut one eye, and my thumb blotted out the planet Earth. I didn’t feel like a giant. I felt very small.”

Stephen Hawking said: “We are just an advanced breed of monkeys on a minor planet of a very average star. But we can understand the universe. That makes us something very special.” I don’t know about you, but I don’t feel very special just because I can understand the universe.

David asks the same question in Psalm 8. Are human beings special? Speaking to God he says: “When I look at your heavens, the work of your fingers, the moon and the stars, which you have set in place, what is man that you are mindful of him, and the son of man that you care for him?”

David then gives God’s answer to this important question. “Yet you have made him a little lower than the heavenly beings and crowned him with glory and honor. You have given him dominion over the works of your hands; you have put all things under his feet, all sheep and oxen, and also the beasts of the field, the birds of the heavens, and the fish of the sea, whatever passes along the paths of the seas.”

Our significance doesn’t come from being on planet Earth or even from understanding the nature of the universe. Our significance comes from the fact that an all-powerful, loving God created us in His image and gave us dominion over His creation.

Astronomy interpreted from a naturalistic worldview doesn’t give us significance. Only a Christian worldview which teaches that we are God’s special creation can give us true significance. I’m Kerby Anderson, and that’s my point of view.

Shadow Scholar

April 28, 2011

A few months ago, *The Chronicle of Higher Education* published an expose written by a man who makes his living writing papers for a custom-essay company. His article is getting even more attention now that *Readers Digest* has printed an edited version. He has written roughly 5,000 pages of scholarly literature for students in college and graduate school. You won't find his name on a single paper.

The article follows his experience with one student who wants him to write a 75-page paper on business ethics. It later became part of a 170-page graduate school thesis. Her e-mail reads as follows: "You did me business ethics propsal [sic] for me I need propsal got approved pls can you will write me paper?" Yes, her English and grammar are that poor. I will spare you all the other e-mails she writes to him.

He has found there are three demographic groups that seek out his services: the English-as-second-language student, the hopelessly deficient student, and the lazy rich kid. He admits that he lives rather well "on the desperation, misery, and incompetence" that our educational system has created. He remarks that "my company's staff of roughly 50 is not large enough to satisfy the demands of students."

Perhaps the greatest irony in his work is that he does lots of work for seminary students. He says: "I like seminary students. They seem so blissfully unaware of the inherent contradiction in paying someone to help them cheat in courses that are largely about walking in the light of God and providing an ethical model for others to follow. I have been commissioned to write many a passionate condemnation of

America's moral decay as exemplified by abortion, gay marriage, or the teaching of evolution. All in all, we may presume that clerical authorities see these as a greater threat than the plagiarism committed by the future frocked."

Anyone looking for evidence of moral decline in America need look no further than the willingness of students (including seminary students) to hire ghostwriters to do their work and then claim it as their own. I'm Kerby Anderson, and that's my point of view.

The Millennial Generation – The Future of Christianity in America

Millennials are the largest generation in American history and also the least religious generation. Kerby Anderson examines what they believe, how media and technology has affected them, and how pastors and Christian leaders can reach this generation.

The Millennial generation is a group of young people whose birth years range from 1980 to 2000. This generation is actually just slightly larger than the Baby Boom generation (born from 1946 to 1964). Nearly 78 million Millennials were born between 1980 and 2000.

Millennials are already having an impact on business, the workplace, churches, and other organizations. They certainly are having an impact on politics. The 18- to 29-year-old Millennials voted for Barack Obama in 2008 by an significant margin. Because of their impact in business, politics, and the

church, they are simply too large and too influential to ignore.

For this article I will be using much of the data from an excellent book by Thom and Jess Rainer, *The Millennials: Connecting to America's Largest Generation*.^{1} Their survey of 1,200 older Millennials (born between 1980 and 1991) provides a detailed look at this generation.

We should begin by noting that not only are Millennials the largest generation, they are also one of the most diverse. That means that for every trend we identify in this generation, there are also lots of exceptions. But that doesn't mean we can't learn some key facets of the Millennials. Here are just a few characteristics.

First, they are on track to become America's most educated generation. "In 2007, the first year the twenty-five- to twenty-nine-year-old age group was entirely comprised of Millennials, 30 percent had attained a college degree. That is the highest rate ever recorded for that age group."^{2}

Second, Millennials view marriage differently than previous generations. They are marrying later, if at all. The average age for first marriage has increased approximately five years since 1970 for both men and women. "About 65 percent of young adults cohabit at least once prior to marriage, compared to just 10 percent in the 1960s."^{3}

Finally, Millennials are the least religious generation in American history. They may say that they are spiritual, but only a small fraction of them say that is important in their lives. The sad reality is that most Millennials don't think about religion at all.

Perhaps the most amazing response from the survey of Millennials was that they are hopeful. Consider their response to the simple statement: "I believe I can do something great." About 60 percent agreed strongly with this statement, and

another 36 percent agreed somewhat. That was almost every respondent, 96 percent in total.[{4}](#)

Marriage and Family

How does the Millennial generation view marriage and family? One way to answer that question is to look at the characteristics of their parents.

Baby Boomers wanted the best for themselves. They had a level of self-centeredness that eventually shifted toward meeting the needs of their children. They wanted everything to be perfect for the Millennial children.

There was a high level of parental involvement. Hence, the parents of Millennials are often called “helicopter parents.” When Millennials were asked about parental involvement, 89 percent responded that they received guidance and advice from their parents.[{5}](#) It turns out that the Boomers are helping Millennials make decisions about work and life. Sometimes the parents sit in on job interviews and even try to negotiate salaries. While previous generations might have rejected such advice, 87 percent of Millennials view their parents as a positive source of influence.[{6}](#)

This positive view Millennials have of parents extends to the older generation as a whole. While Baby Boomers tended to be antiauthoritarian, Millennials have a very positive attitude towards those who are older. Of the Millennials interviewed, 94 percent said they have great respect for older generations.[{7}](#)

When it comes to marriage, Millennials are still optimistic about it even though they grew up in a world where divorce was common. They were asked to respond to the following statement: “It is likely that I will marry more than one time in my life.” For those who responded, 86 percent disagreed that they will marry more than once.[{8}](#) Apparently most Millennials plan

to marry once or not at all. It is also worth noting that Millennials are marrying much later than any generation that had preceded them.

Millennials also view marriage differently in part because of the political battles concerning same-sex marriage and the definition of marriage. In the survey of Millennials, they were asked to respond to this statement: "I see nothing wrong with two people of the same gender getting married." Six in ten agree with the statement (40 percent strongly agreed, 21 percent agreed somewhat).[\[9\]](#) Put simply, a significant majority of Millennials see nothing wrong with same-sex marriage.

The impact of technology on marriage and family is significant. The Millennial generation has grown up with the Internet, cell phones, and social media. It is easier than ever to call on a cell phone or send a text to other members of one's extended family. Posting pictures on Facebook allows family members to immediately see what is happening to their children and grandchildren. Millennials are introducing their families to a variety of ways to stay connected.

Motivating the Millennials

How can we motivate the Millennial generation? The answer to that question is easy: build relationships. Thom and Jess Rainer put it this way. "The best motivators in the workplace for this generation are relationships. The best connectors in religious institutions are relationships. The best way to get a Millennial involved in a service, activity, or ministry is through relationships."[\[10\]](#)

Relationships are important because of their connection to their family. Millennials also see the world as a much smaller place since they can visit anywhere in the world (either in person or on the Internet). And they are connected to people through the new media in ways that no other generation was

able to do.

Education is a high priority for Millennials. This generation is on pace to have significantly more college degrees than the rest of the nation as a whole. About a quarter of the current U.S. population over 25 years old has a college degree, but nearly four in ten of Millennials will probably receive a degree.[{11}](#)

Millennials do want to make money, but they are not driven by money. Their motivation for education and career are motivated more by family and friends. One word that often surfaces is the word “flexibility.” They see money as a means to do what they want to do. At the same time, they reject the “keeping up with the Jones’ mentality” that often drives their parents.

Religion is not much of a motivating factor for Millennials. Spiritual matters are not important to them. Only 13 percent of them viewed religion and spirituality as important. And even among those who described themselves as Christian, only 18 percent said their religion was important to them.[{12}](#)

Only one group in the study said their faith was important to them. This was the subgroup identified as “Evangelicals” because of their orthodox biblical beliefs. Nearly two thirds (65 percent) said their faith was important to them.[{13}](#)

The political orientation of Millennials will no doubt influence elections. Millennials voted for Barack Obama over John McCain in the 2008 election by a two-to-one margin (66 percent to 32 percent). It is also worth noting that only half of the Millennials were eligible to vote that year. A greater percentage of that generation will become eligible to vote in each new election cycle.

Various polls, including exit polls, showed that this generation wanted more centralized power in government. And by more than a two-to-one margin (71 percent to 29 percent) they thought the federal government should guarantee health-care

coverage for all Americans. More than six out of ten felt that government should be responsible for providing for their retirement.{14}

Millennials and Media

The Millennial generation has been influenced by media and technology like no other generation. Social commentators made much of the influence of television on the Baby Boomers but the proliferation of Internet, smart phones, and social media has had an even greater impact on Millennials.

When technology first comes on the scene, there are early adopters, then a significant majority, and finally laggards. Millennials fit into the category of early adopters. In the survey they were asked if they agree with the following statement: "I am usually among the first people to acquire products featuring new technology." About half agreed with the statement, and half disagreed with the statement.{15} And even for those who disagreed, it is safe to say they did not fit into the category of laggards. Millennials are quick to embrace new technology.

There is one technology that Millennials always have in their hands: video games. "Video-game consoles are part of the industry that pulled in more than twenty billion dollars in revenue in 2008."{16} If there was one form of technology that is easily identifiable with Millennials it is video games.

When asked how they most frequently communicate when not actually with the other person, they rated phone first (39 percent), then texting (37 percent), and then e-mail (16 percent). At the bottom was by letter (1 percent). The survey also noticed a difference between older and younger Millennials. Put simply, the younger you are, the more likely you are to communicate by texting.

Social media is also a significant part of the lifestyle of a

Millennial. Not surprisingly, the most popular social media site was Facebook (73 percent), followed by MySpace (49 percent) as a distant second. They also like to read blogs (30 percent) and write blogs (13 percent). But since blogs require more time and energy than other social media, they do not draw in the large numbers like Facebook and MySpace.

Although social media can be accessed in many ways, still the most pervasive is through the computer. Millennials use computers both for work and for personal use. Most Millennials (83 percent) use a computer for work and spend about 17 hours on it each week. One out of five Millennials use their computer for work for 40 or more hours per week.[{17}](#) And Millennials spend time on computers for personal use. The responses ranged from 5 hours per week to 30 hours per week. The average was 17 hours per week.

If you put these numbers together, you find something shocking. The average Millennial spends 17 hours per week on a computer for work, and spends the same amount of time on a computer for personal use. That totals 34 hours per week on a computer. "That means that roughly one-third of Millennials' waking lives are spent on a computer."[{18}](#)

Millennials and Religion

The Millennial generation is the least religious generation in American history. The survey found that they are likely to have a syncretistic belief system. In other words, he or she will take portions of belief from various faiths and non-faiths and blend them together in to a unique spiritual system.

Thom and Jess Rainer found that this generation is less likely to care about religion or spiritual matters than previous generations. When they were asked in an open-ended question what was important to them, spiritual matters were sixth on

the list. Preceding them in importance were family, friends, education, career, and spouse/partner.

When asked to describe themselves, two-thirds (65 percent) used the term Christian. Interestingly, nearly three in ten (28 percent) picked either atheism, agnosticism, or no preference. In other words, they have moved completely away from certain belief in God.

When asked if they were “born-again Christians”, using a precise definition provided by the interviewers, only 20 percent affirmed this definition of belief and experience. And when presented with seven statements about orthodox Christian belief, the researchers found that only 6 percent of Millennials could affirm them and thus could be properly defined as Evangelical.[{19}](#)

A third (34 percent) of Millennials said that no one can know what will happen when they die. But more than one-fourth (26 percent) said they believe they will go to heaven when they die because they have accepted Christ as their Savior.[{20}](#)

Church attendance has been decreasing with each generation. The Millennial generation illustrates that trend. Nearly two-thirds (65 percent) rarely or never attend religious services.[{21}](#) About one-fourth (24 percent) are active in church (meaning they attend at least once a week). This might suggest that a number of Millennials who attend church do so as seekers. In other words, they are at least spiritually interested enough to visit a church even though they may not be saved.

The Millennial generation presents a significant challenge for us as Christians. The largest and least religious generation in American history is here and making an impact. If the church and Christian organizations are to be vibrant and effective in the twenty-first century, pastors and Christian leaders need to know how to connect to the Millennials. The

first step is understanding them and their beliefs. That is why I recommend the book by Thom and Jess Rainer and encourage you to visit our Web site (www.probe.org) for other information on this generation.

unChristian

January 27-28, 2011

If you have ever wondered why non-Christians reject the gospel and turn down your invitation to attend your church, then I have a book for you. Barna Research has produced a book entitled, *unChristian: What a New Generation Really Thinks about Christianity*. This book helps us understand why non-Christians seem so cold to the claims of Christianity.

The researchers found that a minority of young people who believe that labels like “respect, love, hope, and trust” describe Christianity. But the rest have lost respect for Christianity. David Kennaman, President of the Barna Research Group and one of the authors of the book, says we need to resolve this perception problem if we are to connect with the youngest generation.

He lists six common perceptions that non-Christians have about Christians and Christianity.

1. Hypocritical – outsiders to Christianity believe that Christians say one thing and do another. They found that 84 percent knew a Christian, but only 15 percent believed that the Christian they knew acted consistently with his or her beliefs.

Hypocrisy is not just a 21st century phenomenon. Lately I have preached on the subject of hypocrisy and have been reminded how Jesus spoke so strongly against hypocrisy in the 1st century. But this survey shows that Christians must be authentic and acting consistently with Christian beliefs.

2. Focused on converts – outsiders often feel more like targets. Christians want to get them saved, but they don’t listen to them and these outsiders don’t feel truly loved.

3. Anti-homosexual – the younger generation is less likely to see homosexuality as sin so they equate Christians with being anti-homosexual. There is a real need for us to show biblical compassion as we also address this issue with our biblical convictions.

4. Sheltered – outsiders feel that Christians often offer simplistic answers to the complex and troubling aspects of modern life. They perceive us as old-fashioned, boring, and generally out of touch with reality.

5. Political – often outsiders perceive Christianity as merely an extension of right-wing politics. They feel Christians are too political or are motivated by political interests. That doesn't mean Christians shouldn't be salt and light, but they should be aware that this is a connection that non-Christians often make.

6. Judgmental – nearly 90 percent of outsiders say the term "judgmental" accurately describes Christians today. Only 20 percent of outsiders view the church as a place where people are accepted and loved unconditionally. Christians sadly are known more for their criticism than for their love. And we may be so fixated with sin that we cannot really love broken people.

As we look at the six perceptions, we should admit that some of these criticisms would surface no matter how well Christians try to be loving and gracious. After all, many of these same people would probably call Jesus judgmental. So some of these perceptions will be with us no matter what we say or do.

But I think it is important for us to be real and authentic rather than hypocritical. And we should be relevant rather than sheltered. So there is some work for us to do if we are to effectively reach the next generation. I'm Kerby Anderson, and that's my point of view.

Millennials and Media

How has the Millennial generation been influenced by media and technology? Thom and Jess Rainer attempt to answer that question in their book, [*The Millennials: Connecting to America's Largest Generation*](#). Their survey of 1,200 older Millennials provides a detailed look at this generation.

When technology first comes on the scene, there are early adopters then a significant majority and finally laggards. Millennials fit into the category of early adopters. In the survey they were asked if they agree with the following statement: "I am usually among the first people to acquire products featuring new technology." About half agreed with the statement, and half disagreed with the statement. And even for those who disagreed, it is safe to say they did not fit into the category of laggards. Millennials are quick to embrace new technology.

When asked how they most frequently communicate when not actually with the other person, they rated phone first (39 percent), then texting (37 percent), and then e-mail (16 percent). At the bottom was by letter (1 percent). The survey also noticed a difference between older and younger Millennials. Put simply, the younger you are, the more likely you are to communicate by texting.

Social media is also a significant part of the lifestyle of a Millennial. Not surprisingly, the most popular social media site was Facebook (73 percent), followed by MySpace (49 percent).

Although social media can be accessed in many ways, still the most pervasive is through the computer. Millennials use computers both for work and for personal use. Most Millennials

(83 percent) use a computer for work and spend about 17 hours on it each week. And Millennials spend 17 hours per week on computers for personal use.

If you put these numbers together, you find something shocking. The average Millennial spends 17 hours per week on a computer for work, and spends the same amount of time on a computer for personal use. That totals 34 hours per week on a computer. "That means that roughly one-third of Millennials' waking lives are spent on a computer."

If Christians are to reach the Millennial generation, it is important to know how they use media and technology. I'm Kerby Anderson, and that's my point of view.

January 25, 2011

Is the Internet Changing How You Think?

January 21, 2011

Can the Internet change how you think? That was a question columnist Suzanne Fields asked the other day. If you go to Edge.org, you will notice that the question they pose for this year is slightly different. It is: "How is the Internet changing the way you think?"

I have been wondering the same thing. Unlike Suzanne Fields, I wasn't wondering IF the Internet was changing our thinking but HOW it is already changing the way we think. There were two reasons why I have been thinking this.

First, look at the younger generation being raised on the

Internet. If you haven't noticed, they think and communicate different from previous generations. I have done [radio programs](#) and read articles about the millennial generation. They do think differently, and a large part that is due to the Internet.

A second reason for my interest in this topic is an *Atlantic* article by Nicholas Carr entitled "Is Google Making Us Stupid?" He says: "Over the past few years I've had an uncomfortable sense that someone, or something, has been tinkering with my brain, remapping the neural circuitry, reprogramming the memory." He believes this comes from using the Internet and searching the web with Google. And he gives not only his story but many anecdotes and some research to back up his perspective.

A developmental psychologist at Tufts University puts it this way. "We are not only what we read. We are how we read." The style of reading on the Internet puts "efficiency" and "immediacy" above other factors. Put simply, it has changed the way we read and acquire information.

Now you might say that would only be true for the younger generation. Older people are set in their ways. The Internet could not possibly change the way the brains of older people download information. Not true. The 100 billion neurons inside our skulls can break connections and form others. A neuroscientist at George Mason University says: "The brain has the ability to reprogram itself on the fly, altering the way it functions."

The Internet does appear to be altering the way we read and think, but more research is needed to confirm if this true. If so, parents and educators need to take note of what is happening in our cyberworld. I'm Kerby Anderson, and that's my point of view.

Mapping America

Jan. 18, 2011

A new study verifies what many of us have known for some time. Children who grow up in an intact family and attend religious services do better than children who do not. Dr. Patrick Fagan at the Family Research Council documents this in [Mapping America](#). He uses the data collected by Drs. Nicholas Zill and Philip Fletcher from the National Survey of Children's Health.

They found a significant discrepancy between children who grew up in intact families (with both biological parents) and those who came from broken homes. They also found a similar discrepancy between those who attend religious services weekly and those who worship less frequently. They found that children in the former groups were five times less likely to repeat a grade, less likely to have behavior problems at home and school, and more likely to be cooperative and understanding of others' feelings.

The benefits not only accrued to the children, but also had an impact on the parents. For example, parents of kids from intact families who worship regularly were much less likely (21 percent) to be contacted by the child's school about behavior or achievement problems compared to parents (53 percent) whose kids were not living with both parents and not attending church services regularly. Parents of the children in the first group also report less stress, healthier parent-child relationships, and few concerns about their children's achievement.

Even more surprising in the study was the these differences held true even after controlling for family income and poverty as well as for the parents' education level, race, and

ethnicity. In essence, the study suggests that the best prescription for society is a stable family and family worship. In this environment, children thrive emotionally and achieve academically. They become the foundation for the next generation of leaders and citizens.

In a sense, this study is the flip side of studies that were published years ago about the impact of divorce on children. In my book, [Christian Ethics in Plain Language](#), I document the three e's of negative impact of divorce (emotional impact, educational impact, and economic impact). Whether you look at these positive studies or the earlier negative studies, you can see the importance of family and worship. I'm Kerby Anderson, and that is my point of view.

Index of Belonging

Jan. 13, 2011

The American family has been in trouble for some time, but it is often difficult to provide a clear statistical picture of what is happening. Dr. Patrick Fagan at the Family Research Council has put together an Index of Belonging and Rejection that might be the best tool yet to help us understand what is happening to children in these families.

Only 45 percent of American children have spent their childhood in an intact family. The study defines an intact family as one in which a biological mother and father remain legally married to one another since before or around the time of their child's birth.

Let's look at the other part of the index. The first part is belonging. The second part is rejection. When we look at

American teenagers and their parents we see that 55 percent of the teenagers' parents have rejected each other, either through divorce, separation, or choosing not to marry.

Patrick Fagan warns that "American society is dysfunctional, characterized by a faulty understanding of the male-female relationship." He goes on to explain the individual children, as well as communities, suffer the consequences of a "culture of rejection in American homes."

There are some ethnic and regional differences. Asian-American children are most likely to live in intact families. African-American children are least likely. And children living in the South are more likely to live in intact families.

Broken homes lead to broken hearts and a disturbing increase in social problems. These include higher levels of poverty, unemployment, welfare dependency, domestic abuse, child neglect, delinquency, crime, drug abuse, academic failure, and unmarried teen pregnancy and childbearing.

A nation's strength depends upon the strength of its families. This new index illustrates once again in a very powerful way that the strength of the American family is waning. Churches and Christian organizations need to do what they can to strengthen families through preaching, teaching, and programs. I'm Kerby Anderson, and that's my point of view.
