Teen Drug Abuse

A Nine Inch Nails album *The Downward Spiral* features a song "My Self Destruct" with the lyrics: "I am the needle in your vein and I control you, I am the high you can't sustain and I control you." Another song, "Hurt," explores drugs as a means of escape with lyrics like, "The needle tears a hole, the old familiar sting, try to kill it all away."

Five Dodge City, Kansas teenagers, high on marijuana, killed a stranger for no obvious reason. Three West Palm Beach, Florida teenagers mixed beer, rum, marijuana and cocaine. They then kidnapped and set ablaze a tourist from Brooklyn.

Nearly everywhere we look, the consequences of drug abuse can be seen. Violent street gangs, family violence, train crashes, the spread of AIDS, and babies born with cocaine dependency all testify to the pervasive influence of drugs in our world.

The statistics are staggering. The average age of first alcohol use is 12 and the average age of first drug use is 13. According to the National Institute on Drug Abuse, 93 percent of all teenagers have some experience with alcohol by the end of their senior year of high school and 6 percent drink daily. Almost two-thirds of all American young people try illicit drugs before they finish high school. One out of sixteen seniors smokes marijuana daily and 20 percent have done so for at least a month sometime in their lives. A recent poll found that adolescents listed drugs as the most important problem facing people their age, followed by crime and violence in school and social pressures.

Drugs have changed the social landscape of America. Street gangs spring up nearly overnight looking for the enormous profits drugs can bring. Organized crime is also involved in setting up franchises that would make McDonald's envious. But these are not hamburgers. In the world of drugs, homicidally

vicious gangs compete for market share with murderous results. Many gang members outgun the police with their weapons of choice: semi-automatic pistols, AK-47s, and Uzis. Drug dealers have also gone high tech using cellular phones and computers to keep track of deals, while their teenage runners wear phone beepers in school.

The Parents' Resource Institute for Drug Education (PRIDE) reports that children who abuse illicit drugs are significantly more likely to carry a gun to school, take part in gang activities, think of suicide, threaten harm to others, and get in trouble with the police than children who abstain.

One survey released by the University of Colorado shows that the problem of drug use is not just outside the church. The study involved nearly 14,000 junior high and high school youth and compared churched young people with unchurched young people and found very little difference. For example, 88 percent of the unchurched young people reported drinking beer as compared to 80 percent of churched young people. When asked how many had tried marijuana, 47 percent of the unchurched young people had done so compared to 38 percent of the churched youth. For amphetamines and barbiturates, 28 percent of the unchurched had tried them while 22 percent of the church young people had tried them. And for cocaine use, the percentage was 14 percent for unchurched youths and 11 percent for churched youths.

Fighting drugs often seems futile. When drug dealers are arrested, they are often released prematurely because court dockets are overloaded. Plea bargaining and paroles are standard fare as the revolving doors of justice spin faster. As the casualties mount in this war against drugs, some commentators have begun to suggest that the best solution is to legalize drugs. But you don't win a war by surrendering. If drugs were legalized, addiction would increase, health costs would increase, and government would once again capitulate to societal pressures and shirk its responsibility to establish

moral law.

But if legalization is not the answer, then something must be done about the abuse of drugs like alcohol, cocaine, marijuana, heroin, and PCP. Just the medical cost of drug abuse was estimated by the National Center for Health Statistics to be nearly $60 billion, and the medical bill for alcohol was nearly $100 billion.

How to Fight the Drug Battle

Society must fight America’s drug epidemic on five major fronts. The first battlefront is at the border.Federal agents must patrol the 8426 miles of deeply indented Florida coastline and a 2067 mile border with Mexico. This is a formidable task, but vast distances are not the only problem.

The smugglers they are up against have almost unlimited funds and some of the best equipment available. Fortunately, the federal interdiction forces (namely Customs, DEA, and INS) are improving their capability. Customs forces have been given an increase in officers and all are getting more sophisticated equipment.

The second battlefront is law enforcement at home. Police must crack down with more arrests, more convictions, longer sentences, and more seizures of drug dealers’ assets. Unfortunately, law enforcement successes pale when compared to the volume of drug traffic. Even the most effective crackdowns seem to do little more than move drugs from one location to another.

An effective weapon on this battlefront is a 1984 law that makes it easier to seize the assets of drug dealers before conviction. In some cities, police have even confiscated the cars of suburbanites who drive into the city to buy crack.

But attempts to deter drug dealing have been limited by flaws in the criminal justice system. A lack of jail cells prevents

significant prosecution of drug dealers. And even if this problem were alleviated, the shortage of judges would still result in the quick release of drug pushers.

A third battlefront is drug testing. Many government and business organizations are implementing testing on a routine basis in order to reduce the demand for drugs.

The theory is simple. Drug testing is a greater deterrent to drug use than the remote possibility of going to jail. People who know they will have to pass a urine test in order to get a job are going to be much less likely to dabble in drugs. In 1980, 27 percent of some 20,000 military personnel admitted to using drugs in the previous 30 days. Five years later when drug testing was implemented, the proportion dropped to 9 percent.

But drug testing is not without its opponents. Civil libertarians feel this deterrent is not worth the loss of personal privacy. Some unions believe that random testing in the workplace would violate the Fourth Amendment’s prohibition against unreasonable searches. A fourth battleground is drug treatment. Those who are addicted to drugs need help. But the major question is, Who should provide the treatment and who should foot the bill? Private hospital programs are now a $4 billion-a-year business with a daily cost of as much as $500 per bed per day. This is clearly out of the reach of many addicts who do not have employers or insurance companies who can pick up the costs.

A fifth battleground is education. Teaching children the dangers of drugs can be an important step in helping them to learn to say no to drugs. The National Institute on Drug Abuse estimates that 72 percent of the nation’s elementary and secondary-school children are being given some kind of drug education.

Should We Legalize Drugs?

Those weary of the war on drugs have suggested that we should decriminalize drugs. Former Surgeon General Joycelyn Elders suggested we study the impact of legalizing drugs. For years, an alliance of liberals and libertarians have promoted the idea that legalizing drugs would reduce drug costs and drug crimes in this country. But would it? Let’s look at some of the arguments for drug legalization.

1. Legalization will take the profit out of the drug business.

As surprising as it may sound, relatively few drug dealers actually earn huge sums of money. Most in the crack business are low-level runners who make very little money. Many crack dealers smoke more crack than they sell. Drug cartels are the ones making the big profits.

Would legalizing drugs really affect large drug dealers or drug cartels in any appreciable way? Drug cartels would still control price and supply even if drugs were legalized in this country. If government set the price for legalized drugs, criminals could undercut the price and supply whatever the government did not supply.

Addicts would not be significantly affected by legalization. Does anyone seriously believe that their behavior would change just because they are now using legal drugs instead of illegal drugs? They would still use theft and prostitution to support their habits.

Proponents also argue that legalizing drugs would reduce the cost of drugs and thus reduce the supply of drugs flowing to this country. Recent history suggests that just the opposite will take place. When cocaine first hit the United States, it was expensive and difficult to obtain. But when more was dumped into this country and readily available in less expensive vials of crack, drug addiction rose and drug-related

crimes rose.

2. Drug legalization will reduce drug use.

Proponents argue that legalizing drugs will make them less appealing they will no longer be “forbidden fruit.” However, logic and social statistics suggest that decriminalizing drugs will actually increase drug use.

Those arguing for the legalization of drugs often point to Prohibition as a failed social experiment. But was it? When Prohibition was in effect, alcohol consumption declined by 30 to 50 percent and death from cirrhosis of the liver fell dramatically. One study found that suicides and drug-related arrests also declined by 50 percent. After the repeal of the 18th amendment in 1933, alcoholism rose. So did alcohol-related crimes and accidents. If anything, Prohibition proves the point. Decriminalization increases drug use.

Comparing alcohol and drugs actually strengthens the argument against legalization since many drugs are even more addictive than alcohol. Consider, for example, the difference between alcohol and cocaine. Alcohol has an addiction rate of approximately 10 percent, while cocaine has an addiction rate as high as 75 percent.

Many drugs are actually “gateway drugs” to other drugs. A 1992 article in The Journal of Primary Prevention found that marijuana is essentially a “necessary” condition for the occurrence of cocaine use. Other research shows that involvement with illicit drugs is a developmental phenomenon, age correlates with use, and cigarette and alcohol use precedes marijuana use.

Dr. Robert DuPont, former head of the National Institute on Drug Abuse, argues that the potential market for legal drugs can be compared to the number of Americans who now use alcohol

(140 million persons). If his analysis is correct, then approximately 50 million Americans would eventually use cocaine if it were a legal drug.

But the real question is not, Which is worse: alcohol or drugs? The question is whether we can accept both legalized alcohol and legalized drugs. Legalized alcohol currently leads to 100,000 deaths/year and costs us $99 billion/year. We don't need to legalize drugs too.

3. Legalizing drugs will reduce social costs.

"We are losing the war on drugs," say drug legalization proponents, "so let's cut the costs of drug enforcement by decriminalizing drugs."

Currently the U.S. spends $11 billion/year to combat drug-related crime.If drugs were made legal, some crime-fighting costs might drop but many social costs would certainly increase: other forms of crime (to support habits), drug-related accidents, and welfare costs.

Statistics from states that have decriminalized marijuana demonstrate this concern. In California, within the first six months of decriminalization, arrests for driving under the influence of drugs rose 46 percent for adults and 71.4 percent for juveniles. The use of marijuana doubled in Alaska and Oregon when it was decriminalized in those states.

Crime would certainly increase. Justice Department figures show that approximately one-third of inmates used drugs prior to committing their crimes.

And juvenile crime would no doubt increase as well. A 1990 study published in the Journal of Drug Issues found a strong association between the severity of the crime and the type of substance used the more intoxicating the substance, the more serious the incident.

Meanwhile, worker productivity would decrease and student productivity would decrease.

The Drug Enforcement Administration estimates that drug decriminalization will cost society more than alcohol and tobacco combined, perhaps $140-210 billion a year in lost productivity and job-related accidents.

Government services would no doubt have to be expanded to pay for additional drug education and treatment for those addicted to legal drugs. And child protective services would no doubt have to expand to deal with child abuse. Patrick Murphy, a court-appointed lawyer for 31,000 abused and neglected children in Chicago, says that more than 80 percent of the cases of physical and sexual abuse of children now involve drugs. Legalizing drugs will not reduce these crimes; it would make the problem worse.

And is it accurate to say we are losing the war on drugs? Drug use in this country was on the decline in the 1980s due to a strong anti-drug campaign. Casual cocaine use, for example, dropped from 12 million in 1985 to 6 million in 1991. You don’t win a war by surrender. Legalizing drugs in this country would constitute surrender in the drug war at a time when we have substantial evidence we can win this battle on a number of fronts.

4. Government should not dictate moral policy on drugs.

Libertarians who promote drug legalization value personal freedom. They believe that government should not dictate morals and fear that our civil liberties may be threatened by a tougher policy against drugs.

The true threat to our freedoms comes from the drug cartels in foreign countries, drug lords in this country, and drug dealers in our streets. Legalizing drugs would send the wrong message to society. Those involved in drug use eventually see that drugs ultimately lead to prison or death, so they begin

to seek help.

Obviously some people are going to use drugs whether they are legal or illegal. Keeping drugs illegal maintains criminal sanctions that persuade most people their life is best lived without drugs. Legalization, on the other hand, removes the incentive to stay away from drugs and increases drug use.

William Bennett has said, “I didn’t have to become drug czar to be opposed to legalized marijuana. As Secretary of Education I realized that, given the state of American education, the last thing we needed was a policy that made widely available a substance that impairs memory, concentration, and attention span. Why in God’s name foster the use of a drug that makes you stupid?”

Biblical Perspective

Some people may believe that the Bible has little to say about drugs, but this is not so. First, the Bible has a great deal to say about the most common and most abused drug: alcohol. Ephesians 5:18 admonishes Christians not to be drunk with wine. In many places in Scripture drunkenness is called a sin (Deut. 21:20-21, Amos 6:1, 1 Cor.6:9-10, Gal. 5:19-20). The Bible also warns of the dangers of drinking alcohol in Proverbs 20:1, Isaiah 5:11, Habakkuk 2:15-16. If the Bible warns of the danger of alcohol, then by implication it is also warning of the dangers of taking other kinds of drugs.

Second, drugs were an integral part of many ancient near East societies. For example, the pagan cultures surrounding the nation of Israel used drugs as part of their religious ceremonies. Both the Old Testament and New Testament condemn sorcery and witchcraft. The word translated “sorcery” comes from the Greek word from which we get the English words “pharmacy” and “pharmaceutical.” In ancient time, drugs were prepared by a witch or shaman.

Drugs were used to enter into the spiritual world by inducing an altered state of consciousness that allowed demons to take over the mind of the user. In that day, drug use was tied to sorcery. In our day, many use drugs merely for so-called "recreational" purposes, but we cannot discount the occult connection.

Galatians 5:19-21 says: "The acts of the sinful nature are obvious: sexual immorality, impurity and debauchery, idolatry and witchcraft [which includes the use of drugs]; hatred, discord, jealousy, fits of rage, selfish ambition, dissensions, factions, and envy; drunkenness, orgies, and the like.I warn you, as I did before, that those who live like this will not inherit the kingdom of God." The word witchcraft here is also translated "sorcery" and refers to the use of drugs. The Apostle Paul calls witchcraft that was associated with drug use a sin. The non-medical use of drugs is considered one of the acts of a sinful nature. Using drugs, whether to "get a high" or to tap into the occult, is one of the acts of a sinful nature where users demonstrate their depraved and carnal nature.

The psychic effects of drugs should not be discounted. A questionnaire designed by Charles Tate and sent to users of marijuana documented some disturbing findings. In his article in *Psychology Today* he noted that one fourth of the marijuana users who responded to his questionnaire reported that they were taken over and controlled by an evil person or power during their drug induced experience. And over half of those questioned said they have experienced religious or "spiritual" sensations in which they meet spiritual beings.

Many proponents of the drug culture have linked drug use to spiritual values. During the 1960s, Timothy Leary and Alan Watts referred to the "religious" and "mystical" experience gained through the use of LSD (along with other drugs) as a prime reason for taking drugs.

No doubt drugs are dangerous, not only to our body but to our spirit. As Christians, we must warn our children and our society of the dangers of drugs.

Feminist Myths

As someone who works in the media, I am well aware that certain myths get started and have a life of their own. A number of these myths are promoted and disseminated by feminists and can be found in the book *Who Stole Feminism?* The author, Christina Hoff Sommers, though a feminist, has been concerned for some time about the prominence of these myths and does a masterful job tracing down the origin of each and setting the record straight. If you want more information on any of these, I would recommend you obtain her well-documented book.

Myth of the Extent of Anorexia Nervosa

In her book *Revolution from Within*, Gloria Steinem informed her readers that "in this country alone…about 150,000 females die of anorexia each year." To put this dramatic statistic in perspective, this is more than three times the annual number of fatalities from car accidents for the total population. The only problem with the statistic is that it is absolutely false.

Lest you think that this was a mere typographical error, consider the following. The statistic also appears in the feminist best- seller *The Beauty Myth* by Naomi Wolf. "How,"

she asks, “would America react to the mass self-immolation by hunger of its favorite sons?” While admitting that “nothing justifies comparison with the Holocaust,” she nevertheless makes just such a comparison. “When confronted with a vast number of emaciated bodies starved not by nature but by men, one must notice a certain resemblance.”

What was the source of this statistic? Ms. Wolf got her figures from *Fasting Girls: The Emergence of Anorexia Nervosa as a Modern Disease* by Joan Brumberg, a historian and former director of women’s studies at Cornell University. It turns out that she misquoted the American Anorexia and Bulimia Association which had stated that there are 150,000 to 200,000 sufferers (not fatalities) of anorexia nervosa. The actual figure is many orders of magnitude lower. According to the National Center for Health Statistics, there were 70 deaths from anorexia in 1990. Even 70 deaths is tragic, but 70 deaths out of population of over 100 million women can hardly be considered a holocaust.

Apparently Naomi Wolf plans to revise her figures in an updated version of *The Beauty Myth*, but the figure is now widely accepted as true. Ann Landers repeated it in her 1992 column by stating that “every year, 150,000 American women die from complications associated with anorexia and bulimia.” The false statistic has also made it into college textbooks. A women’s studies text, aptly titled *The Knowledge Explosion*, contains the erroneous figure in its preface.

Myth of Amount of Domestic Violence

On November 1992, Deborah Louis, president of the National Women’s Studies Association, sent a message to the Women’s Studies Electronic Bulletin Board. It read, “According to [the] last March of Dimes report, domestic violence (vs. pregnant women) is now responsible for more birth defects than all other causes combined.” On February 23, 1993, Patricia Ireland, president of the National Organization for Women,

said on the Charlie Rose program that “battery of pregnant women is the number one cause of birth defects in this country.”

Certainly unsettling data. But again, the biggest problem is that the statistic is absolutely false. The March of Dimes never published the study and did not know of any research that corroborated the statement.

Nevertheless, journalists willingly recited the erroneous statistic. The *Boston Globe* reported that “domestic violence is the leading cause of birth defects, more than all other medical causes combined, according to a March of Dimes study.” The *Dallas Morning News* reported that “the March of Dimes has concluded that the battering of women during pregnancy causes more birth defects than all the diseases put together for which children are usually immunized.”

When *Time* magazine published essentially the same article, the rumor started spinning out of control. Concerned citizens and legislators called the March of Dimes for the study. Eventually the error was traced to Sarah Buel, a founder of the domestic violence advocacy project at Harvard Law School. She misunderstood a statement made by a nurse who noted that a March of Dimes study showed that more women are screened for birth defects than they are for domestic battery. The nurse never said anything about battery causing birth defects.

Although we could merely chalk this error up to a misunderstanding, it is disturbing that so many newspapers and magazines reported it uncritically. Battery causing birth defects? More than genetic disorders like spina bifida, Downs syndrome, Tay-Sachs, sickle-cell anemia? More than alcohol, crack, or AIDS? Where was the press in checking the facts? Why are feminist myths so easily repeated in the press?

Myth of Increased Domestic Battery on Super Bowl Sunday

In January 1993 newspaper and television networks reported an alarming statistic. They stated that the incidence of domestic violence tended to rise by 40 percent on Super Bowl Sunday. NBC, which was broadcasting the game, made a special plea for men to stay calm. Feminists called for emergency preparations in anticipation of the expected increase in violence.

Feminists also used the occasion to link maleness and violence against women. Nancy Isaac, a Harvard School of Public Health research associate specializing in domestic violence, told the Boston Globe: “It’s a day for men to revel in their maleness and unfortunately, for a lot of men that includes being violent toward women if they want to be.”

Nearly every journalist accepted the 40 percent figure—except for Ken Ringle at the *Washington Post*. He checked the facts and was able to expose the myth, but not before millions of Americans were indoctrinated with the feminist myth of male aggression during Super Bowl Sunday.

Myth Concerning Percent of Women Raped

The Justice Department says that 8 percent of all American women will be victims of rape or attempted rape in their lifetime. Feminist legal scholar Catherine MacKinnon, however, claims that rape happens to almost half of all women at least once in their lives.

Who is right? Obviously, the difference between these two statistics stems from a number of factors ranging from under-reporting to very different definitions of rape. The Justice Department figure is obviously low since it is based on the number of cases reported to the police, and rape is the most under- reported of crimes.

The feminist figures are artificially high because they use very broad definitions of rape and let the questioner rather than the victim decide whether there was a rape or not. The two most frequently cited studies are the 1985 *Ms.* magazine study and the 1992 National Women's Study. The Ms. magazine study of 3,000 college students gave a statistic of about 1 in 4 for women who have been raped or victim of an attempted rape. However, the study used very broad definitions of rape which sometimes included kissing, fondling, and other activities that few people would call rape. In fact, only 27 percent of those women counted as having been raped actually labeled themselves as rape victims. Also, 42 percent of those counted as rape victims went on to have sex with their "attackers" on a later occasion.

The National Women's Study released a figure of 1 in 8 women who have been raped. Again the surveyors used extremely broad, expanded definitions of rape that allowed the surveyor to decide if a woman had been raped or not.

The statistics for "date rape" and rape on campus have also been exaggerated. Camille Paglia warns that "date rape has swelled into a catastrophic cosmic event, like an asteroid threatening the earth in a fifties science-fiction film." Contrast this with the date- rape hype on most college campuses that includes rallies, marches, and date-rape counseling groups.

Peter Hellman, writing for New York magazine on the subject of rape on campus, was surprised to find that campus police logs at Columbia University showed no evidence of rape on campus. Only two rapes were reported to the Columbia campus police, and in both cases, the charges were dropped for lack of evidence. Hellman checked figures for other campuses and found fewer than .5 rapes per campus. He also found that public monies were being spent disproportionately on campus rape programs while community rape programs were scrambling for dollars.

The high rape numbers serve gender feminists by promoting the belief that American culture is sexist and misogynist. They also help liberal politicians by providing justification for additional funding for social services. Senator Joseph Biden introduced the Violence Against Women Act to "raise the consciousness of the American public." He argues that violence against women is much like racial violence and calls for civil as well as criminal remedies.

Myth Concerning Female Self-esteem

In 1991, newspapers around the country proclaimed that the self- esteem of teenage girls was falling. The *New York Times* announced, "Little girls lose their self-esteem on way to adolescence, study finds."

The study was commissioned by the American Association of University Women (AAUW) to measure self-esteem of girls and boys between the ages of nine and fifteen. Their poll seemed to show that between the ages of eleven and sixteen, girls experience a dramatic drop in self-esteem, which in turn significantly affects their ability to learn and to achieve. The report made headlines around the country and led to hundreds of conferences and community action projects.

Here is how the AAUW summarized the results of the survey in their brochure: In a crucial measure of self-esteem, 60 percent of elementary school girls and 69 percent of elementary school boys say they are "happy the way I am." But, by high school, girls' self-esteem falls 31 points to only 29 percent, while boys' self- esteem falls only 23 points to 46 percent.

Girls are less likely than boys to say they are "pretty good at a lot of things." Less than a third of girls express this confidence, compared to almost half the boys. A 10-point gender gap in confidence in their abilities increases to 19 points in high school.

It turns out that the report didn’t even define the term self-esteem, or even promote an informal discussion of what the authors meant by it. Other researchers suspect that the apparent gap in self-esteem may merely reflect a gap in expressiveness. Girls and women are more aware of their feelings and more articulate in expressing them, and so they are more candid about their negative emotions in self-reports than males are.

When asked if they are “good at a lot of things,” boys more often answered, “all the time,” whereas girls, being more reflective, gave more nuanced answers (“some of the time” or “usually”). Although the surveyors decided that the girls’ response showed poor self-esteem, it may merely reflect a “maturity gap” between boys and girls. Boys, lacking maturity, reflectiveness, and humility, are more likely to answer the question as “always true.”

Myth of Discrimination Against Females in School

An American Association of University Women (AAUW) report argued that schools and teachers were biased against girls in the classroom. *The Wellesley Report*, published in 1992, argued that there was a gender bias in education. The *Boston Globe* proclaimed that “from the very first days in school, American girls face a drum-fire of gender bias, ranging from sexual harassment to discrimination in the curriculum to lack of attention from teachers, according to a survey released today in Washington.” The release of this study was again followed by great media attention and the convening of conferences. It also provided the intellectual ammunition for the “Gender Equity in Education” bill introduced in 1993 by Patricia Schroeder, Susan Molinari, and others. It would have established a permanent and well-funded gender equity bureaucracy.

Are women really being damaged by our school system? Today 55 percent of college students are female, and women receive 52 percent of the bachelor's degrees. Yes, girls seem somewhat behind in math and science, but those math and science test differentials are small compared with the large differentials favoring girls in reading and writing.

The study also assumed that teachers' verbal interactions with students indicated how much they valued them. The surveyors therefore deduced that teachers valued boys more than girls. However, teachers often give more attention to boys because they are more immature and require the teacher to keep them in line. Most girls, being more mature, don't want the attention or verbal discipline and need less negative attention to get their work done.

Myth of Huge Gender Wage Gap

A major rallying cry during the debates on comparable worth was that women make 59 cents for every dollar men do. The figure is now 71 cents. But if you factor in age, length of time in the workplace, and type of job, the wage gap is much smaller for younger women. Those with children tend to make slightly less than those without children, but it's closer to 90 cents.

Feminists argue that the pay gap is a vivid illustration of discrimination. Economists argue that it's due to shorter work weeks and less workplace experience. It is no doubt also due to the kind of jobs women choose. Women generally prefer clean, safe places with predictable hours and less stress. The more dangerous, dirty, and high-pressure jobs generally appeal to men. This is reflected in salary differences.

Violence in Society

Kerby Anderson helps us take a biblical perspective on a very scary and touchy issue: violence in America. Applying a Christian worldview, he shines the spotlight on areas of today's culture that should concern us all.

It's a scary world today!

Growing up used to be less traumatic just a few decades ago. Children back then worried about such things as a flat tire on their Schwinns and hoped that their teacher wouldn't give too much homework.

How life has changed. A 1994 poll found more than half the children questioned said they were afraid of violent crime against them or a family member. Are these kids just paranoid, or is there a real problem?

Well, it turns out this is not some irrational fear based upon a false perception of danger. Life has indeed become more violent and more dangerous for children. Consider the following statistics: One in six youths between the ages of 10 and 17 has seen or knows someone who has been shot. The estimated number of child abuse victims increased 40 percent between 1985 and 1991. Children under 18 were 244 percent more likely to be killed by guns in 1993 than they were in 1986. Violent crime has increased by more than 560 percent since 1960.

The innocence of childhood has been replaced by the very real threat of violence. Kids in school try to avoid fights in the hall, walk home in fear, and sometimes sleep in bathtubs in order to protect themselves from stray bullets fired during drive-by shootings.

Even families living in so-called “safe” neighborhoods are concerned. They may feel safe today, but there is always a reminder that violence can intrude at any moment. Polly Klaas and her family no doubt felt safe in Petaluma, California. But on October 1, 1993, she was abducted from her suburban home during a sleepover with two friends. If she can be abducted and murdered, so can nearly any other child.

A child’s exposure to violence is pervasive. Children see violence in their schools, their neighborhoods, and their homes. The daily news is rife with reports of child molestations and abductions. War in foreign lands along with daily reports of murder, rape, and robberies also heighten a child’s perception of potential violence.

Television in the home is the greatest source of visual violence for children. The average child watches 8,000 televised murders and 100,000 acts of violence before finishing elementary school. That number more than doubles by the time he or she reaches age 18.

And the latest scourge is MTV. Teenagers listen to more than 10,000 hours of rock music, and this impact is intensified as they spend countless hours in front of MTV watching violent and sensual images that go far beyond the images shown on commercial television.

It’s a scary world, and children are exposed to more violence than any generation in recent memory. An article in *Newsweek* magazine concluded: “It gets dark early in the Midwest this time of year. Long before many parents are home from work, the shadows creep up the walls and gather in the corners, while on the carpet a little figure sprawls in the glow emanating from an anchorman’s tan. There’s been a murder in the Loop, a fire in a nightclub, an indictment of another priest. Red and white lights swirl in urgent pinwheels as the ambulances howl down the dark streets. And one more crime that never gets reported, because there’s no one to arrest. Who killed childhood? We all

did.”

“As a man thinks in his heart, so is he.”

Violence has always been a part of the human condition because of our sin nature (Rom. 3:23). But modern families are exposed to even more violence than previous generations because of the media. Any night of the week, the average viewer can see levels of violence approaching and even exceeding the Roman Gladiator games.

Does this have an effect? Certainly it does. The Bible teaches that “as a man thinks in his heart, so is he” (Prov. 23:7). What we view and what we think about affects our actions.

Defenders of television programs say that isn’t true. They contend that televised imagery doesn’t make people violent nor does it make people callous to suffering. But if televised imagery doesn’t affect human behavior, then the TV networks should refund billions of advertising dollars to TV sponsors.

In essence, TV executives are talking out of both sides of their mouths. On the one hand, they try to convince advertisers that a 30-second commercial can influence consumer behavior. On the other hand, they deny that a one-hour program wrapped around the commercials can influence social behavior.

So, how violent is the media? And what impact does media have on members of our family? First, we will look at violence in the movies, and then we’ll take up the issue of violence on television.

Ezra Pound once said that artists are “the antennae of the race.” If that is so, then we are a very sick society judging by the latest fare of violence in the movies. The body count is staggering: 32 people are killed in “RoboCop,” while 81 are killed in the sequel; 264 are killed in “Die Hard 2,” and the film “Silence of the Lambs” deals with a psychopath who murders women and skins them.

Who would have imagined just a few years ago that the top grossing films would be replete with blood, gore, and violence? No wonder some film critics now say that the most violent place on earth is the Hollywood set.

Violence has always been a part of movie-making, but until recently, really violent movies were only seen by the fringe of mass culture. Violence now has gone mainstream. Bloody films are being watched by more than just punk rockers. Family station wagons and vans pull up to movie theaters showing R-rated slasher films. And middle America watches these same programs a few months later on cable TV or on video. Many of the movies seen at home wouldn't have been shown in theaters 10-20 years ago.

Movie violence these days is louder, bloodier, and more anatomically precise than ever before. When a bad guy was shot in a black-and-white Western, the most we saw was a puff of smoke and a few drops of fake blood. Now the sights, sounds, and special effects often jar us more than the real thing. Slow motion, pyrotechnics, and a penchant for leaving nothing to the imagination all conspire to make movies and TV shows more gruesome than ever.

Children especially confront an increasingly violent world with few limits. As concerned parents and citizens we must do what we can to reduce the level of violence in our society through the wise use of discernment and public policy. We need to set limits both in our homes and in the community.

Does Media Violence Really Influence Human Behavior?

Children's greatest exposure to violence comes from television. TV shows, movies edited for television, and video games expose young children to a level of violence unimaginable just a few years ago. The average child watches 8,000 televised murders and 100,000 acts of violence before

finishing elementary school. That number more than doubles by the time he or she reaches age 18.

The violent content of TV includes more than just the 22 minute programs sent down by the networks. At a very young age, children are seeing a level of violence and mayhem that in the past may have only been witnessed by a few police officers and military personnel. TV brings hitting, kicking, stabbings, shootings, and dismemberment right into homes on a daily basis.

The impact on behavior is predictable. Two prominent Surgeon General reports in the last two decades link violence on television and aggressive behavior in children and teenagers. In addition, the National Institute of Mental Health issued a 94-page report entitled, “Television and Behavior: Ten Years of Scientific Progress and Implications for the Eighties.” They found “overwhelming” scientific evidence that “excessive” violence on television spills over into the playground and the streets. In one five-year study of 732 children, “several kinds of aggression– conflicts with parents, fighting and delinquency–were all positively correlated with the total amount of television viewing.”

Long-term studies are even more disturbing. University of Illinois psychologist Leonard Eron studied children at age eight and then again at eighteen. He found that television habits established at the age of eight influenced aggressive behavior through childhood and adolescent years. The more violent the programs preferred by boys in the third grade, the more aggressive their behavior, both at that time and ten years later. He therefore concluded that “the effect of television violence on aggression is cumulative.”

Twenty years later Eron and Rowell Huesmann found the pattern continued. He and his researchers found that children who watched significant amounts of TV violence at the age of 8 were consistently more likely to commit violent crimes or

engage in child or spouse abuse at 30.

They concluded “that heavy exposure to televised violence is one of the causes of aggressive behavior, crime and violence in society. Television violence affects youngsters of all ages, of both genders, at all socioeconomic levels and all levels of intelligence.”

Since their report in the 1980s, MTV has come on the scene with even more troubling images. Adolescents already listen to an estimated 10,500 hours of rock music between the 7th and 12th grades. Now they also spend countless hours in front of MTV seeing the visual images of rock songs that depict violence, rebellion, sadomasochism, the occult, drug abuse, and promiscuity. MTV reaches 57 million cable households, and its video images are even more lurid than the ones shown on regular TV. Music videos filled with sex, rape, murder, and other images of mayhem assault the senses. And MTV cartoons like Beavis and “the other guy” assault the sensibilities while enticing young people to start fires and commit other acts of violence. Critics count 18 acts of violence in each hour of MTV videos.

Violent images on television and in the movies do contribute to greater violence in society. Sociological studies along with common sense dictate that we do something to reduce the violence in the media before it further damages society.

Television Promotes Not Only Violence But Fear As Well.

Children see thousands of TV murders every year. And the impact on behavior is predictable. Various reports by the Surgeon General in the last two decades link violence on television and aggressive behavior in children and teenagers. In addition, the National Institute of Mental Health issued a 94-page report entitled, “Television and Behavior: Ten Years of Scientific Progress and Implications for the Eighties.”

They found “overwhelming” scientific evidence that “excessive” violence on television spills over into the playground and the streets. In one five-year study of 732 children, “several kinds of aggression (such as conflicts with parents, fighting and delinquency) were all positively correlated with the total amount of television viewing.”

Confronted with such statistics, many parents respond that their children aren’t allowed to watch violent programs. Such action is commendable, but some of the greatest dangers of television are more subtle and insidious. It now appears that simply watching television for long periods can manipulate your view of the world— whether the content is particularly violent or not.

George Gerbner and Larry Gross working at the Annenberg School of Communications in the 1970s found that heavy TV viewers live in a scary world. “We have found that people who watch a lot of TV see the real world as more dangerous and frightening than those who watch very little. Heavy viewers are less trustful of their fellow citizens, and more fearful of the real world.”

So heavy viewers were less trustful and more fearful than the average citizen. But what constitutes a heavy viewer. Gerber and Gross defined heavy viewers as those adults who watch an average of four or more hours of television a day. Approximately one-third of all American adults fit that category.

They found that violence on prime-time TV exaggerated heavy viewers’ fears about the threat of danger in the real world. Heavy viewers, for example, were less likely to trust someone than light viewers. Heavy viewers also tended to overestimate their likelihood of being involved in a violent crime.

And if this is true of adults, imagine how much TV violence affects children’s perception of the world. Gerbner and Gross

say, “Imagine spending six hours a day at the local movie house when you were 12 years old. No parent would have permitted it. Yet, in our sample of children, nearly half the 12-year-olds watch an average of six or more hours of television per day.” This would mean that a large portion of young people fit into the category of heavy viewers. Their view of the world must be profoundly shaped by TV. Gerbner and Gross therefore conclude: “If adults can be so accepting of the reality of television, imagine its effect on children. By the time the average American child reaches public school, he has already spent several years in an electronic nursery school.”

Television violence affects both adults and children in subtle ways. While we may not personally feel or observe the effects of TV violence, we should not ignore the growing body of data that suggests that televised imagery does affect our perception and behavior.

Obviously something must be done. Parents, programmers, and general citizens must take responsible actions to prevent the increasing violence in our society. Violent homes, violence on television, violence in the movies, violence in the schools all contribute to the increasingly violent society we live in. We have a responsibility to make a difference and apply the appropriate principles in order to help stem the tide of violence in our society.

Some Suggestions for Dealing with Violence in the Media

Christians must address this issue of violence in our society. Here are a number of specific suggestions for dealing with violence.

1. Learn about the impact of violence in our society. Share this material with your pastor, elders, deacons, and church members. Help them understand how important this issue is to

them and their community.

2. Create a safe environment. Families live in the midst of violence. We must make our homes safe for our families. A child should feel that his or her world is safe. Providing care and protection are obvious first steps. But parents must also establish limits, provide emotional security, and teach values and virtue in the home.

3. Parents should limit the amount of media exposure in their homes. The average young person sees entirely too much violence on TV and at the movies. Set limits to what a child watches, and evaluate both the quantity and quality of their media input (Rom. 12:2). Focus on what is pure, beautiful, true, right, honorable, excellent, and praiseworthy (Phil. 4:8).

4. Watch TV with children. Obviously we should limit the amount of TV our children watch. But when they watch television, we should try to watch it with them. We can encourage discussion with children during the programs. The plots and actions of the programs provides a natural context for discussion and teach important principles about relationships and violence. The discussion could focus on how cartoon characters or TV actors could solve their problems without resorting to violence. TV often ignores the consequences of violence. What are the consequences in real life?

5. Develop children's faith and trust in God. Children at an early age instinctively trust their parents. As the children grow, parents should work to develop their child's trust in God. God is sovereign and omnipotent. Children should learn to trust Him in their lives and depend upon Him to watch over them and keep them safe.

6. Discuss the reasons for pain and suffering in the world. We live in the fallen world (Gen. 3), and even those who follow

God will encounter pain, suffering, and violence. Bad things do happen to good people.

7. Teach vigilance without hysteria. By talking about the dangers in society, some parents have instilled fear—even terror— in their children. We need to balance our discussions with them and not make them hysterical. Kids have been known to become hysterical if a car comes down their street or if someone looks at them.

8. Work to establish broadcaster guidelines. No TV or movie producer wants to unilaterally disarm all the actors on their screens out of fear that viewers will watch other programs and movies. Yet many of these same TV and movie producers would like to tone down the violence, but they don't want to be the first to do so. National standards would be able to achieve what individuals would not do by themselves in a competitive market.

Violence is the scourge of our society, but we can make a difference. We must educate ourselves about its influence and impact on our lives. Please feel free to write or call Probe Ministries for more information on this topic. And then take time to apply the principles developed here to make a difference in your home and community. You can help stem the tide of violence in our society.

The Teen Sexual Revolution –

Abstinence Programs Are The Only Biblical Response

Kerby Anderson considers the real problems created by the new American attitude extolling the virtues of teen sexual activity. He examines the effectiveness of various programs designed to stem the tide of teen sexual activity. He concludes the only reasonable approach is teaching the reasons for and benefits of abstinence prior to marriage.

One of the low points in television history occurred September 25, 1991. The program was "Doogie Howser, M.D." This half-hour TV show, aimed at preteen and teenage kids, focused on the trials and tribulations of an 18-year-old child prodigy who graduated from medical school and was in the midst of medical practice. Most programs dealt with the problems of being a kid in an adult's profession. But on September 25 the "problem" Doogie Howser confronted was the fact that he was still a virgin.

Advance publicity drove the audience numbers to unanticipated levels. Millions of parents, teenagers, and pajama-clad kids sat down in front of their televisions to watch Doogie Howser and his girlfriend Wanda deal with his "problem." Twenty minutes into the program, they completed the act. Television ratings went through the roof. Parents and advertisers should have as well.

What is wrong with this picture? Each day approximately 7700 teenagers relinquish their virginity. In the process, many will become pregnant and many more will contract a sexually transmitted disease (STD). Already 1 in 4 Americans have an STD, and this percentage is increasing each year. Weren't the producers of "Doogie Howser, M.D." aware that teenage pregnancy and STDs are exploding in the population? Didn't they stop and think of the consequences of portraying

virginity as a “problem” to be rectified? Why weren’t parents and advertisers concerned about the message this program was sending?

Perhaps the answer is the trite, age-old refrain “everybody’s doing it.” Every television network and nearly every TV program deals with sensuality. Sooner or later the values of every other program were bound to show up on a TV program aimed at preteens and teenagers. In many ways the media is merely reflecting a culture that was transformed by a sexual revolution of values. Sexually liberal elites have hijacked our culture by seizing control of two major arenas. The first is the entertainment media (television, movies, rock music, MTV). The second is the area of sex education (sex education classes and school- based clinics). These two forces have transformed the social landscape of America and made promiscuity a virtue and virginity a “problem” to be solved.

The Teenage Sexuality Crisis

We face a teenage sexuality crisis in America. Consider these alarming statistics of children having children. A New York Times article reported: “Some studies indicate three-fourths of all girls have had sex during their teenage years and 15 percent have had four or more partners.” A Lou Harris poll commissioned by Planned Parenthood discovered that 46 percent of 16-year-olds and 57 percent of 17-year-olds have had sexual intercourse.

Former Secretary of Education William Bennett in speaking to the National School Board Association warned that “The statistics by which we measure how our children how our boys and girls are treating one another sexually are little short of staggering.” He found that more than one-half of America’s young people have had sexual intercourse by the time they are seventeen. He also found that more than one million teenage girls in the U.S. become pregnant each year. Of those who give birth, nearly half are not yet eighteen.

“These numbers,” William Bennett concluded, “are an irrefutable indictment of sex education’s effectiveness in reducing teenage sexual activity and pregnancies.” Moreover, these numbers are not skewed by impoverished, inner city youths from broken homes. One New York polling firm posed questions to 1300 students in 16 high schools in suburban areas in order to get a reading of “mainstream” adolescent attitudes. They discovered:

- *57% lost virginity in high school*
- *79% lost virginity by the end of college*
- *16.9 average age for sex*
- *33% of high school students had sex once a month to once a week*
- *52% of college students had sex once a month to once a week.*

Kids are trying sex at an earlier age than ever before. More than a third of 15-year-old boys have had sexual intercourse as have 27 percent of the 15-year-old girls. Among sexually active teenage girls, 61 percent have had multiple partners. The reasons for such early sexual experimentation are many.

Biology is one reason. Teenagers are maturing faster sexually due to better health and nutrition. Since the turn of the century, for example, the onset of menstruation in girls has dropped three months each decade. Consequently, urges that used to arise in the mid-teens now explode in the early teens. Meanwhile the typical age of first marriage has risen more than four years since the 1950s.

A sex-saturated society is another reason. Sex is used to sell everything from cars to toothpaste. Sexual innuendos clutter most every TV program and movie. And explicit nudity and sensuality that used to be reserved for R-rated movies has found it way into the home through broadcast and cable

television. Media researchers calculate that teenagers see approximately five hours of TV a day. This means that they see each year nearly 14,000 sexual encounters on television alone.

Lack of parental supervision and direction is a third reason. Working parents and reductions in after-school programs have left teenagers with less supervision and a looser after-school life. In the inner city, the scarcity of jobs and parents coupled with a cynical view of the future invites teenage promiscuity and its inevitable consequences. Adolescent boys in the suburbs trying to prove their masculinity, herd into groups like the infamous score- keeping Spur Posse gang in California.

Even when teenagers want to sit out the sexual revolution, they often get little help from parents who may be too embarrassed or intimidated to talk to their children. Parents, in fact, often lag behind their kids in sexual information. At one sex-education workshop held by Girls Inc. (formerly Girls Club of America), nearly half of the mothers had never seen a condom. Other mothers did not want to talk about sex because they were molested as children and were fearful of talking about sex with their daughters.

Teenagers are also getting mixed messages. In any given week, they are likely to hear contradictory messages. “No sex until you’re married.” “No sex unless you’re older.” “No sex unless you’re protected.” “No sex unless you’re in love.” No wonder adolescents are confused.

The Report Card on Sex Education

For more than thirty years proponents of comprehensive sex education have told us that giving sexual information to young children and adolescents will reduce the number of unplanned pregnancies and sexually transmitted diseases. In that effort nearly $3 billion has been spent on federal Title X family planning services, yet teenage pregnancies and abortions rise.

Perhaps one of the most devastating popular critiques of comprehensive sex education came from Barbara Dafoe Whitehead. The journalist who said that Dan Quayle was right also was willing to say that sex education was wrong. Her article in the October 1994 issue of *Atlantic Monthly* entitled "The Failure of Sex Education" demonstrated that sex education neither reduced pregnancy nor slowed the spread of STDs.

Comprehensive sex education is mandated in at least 17 states, so Whitehead chose one state and focused her analysis on the sex education experiment in New Jersey. Like other curricula the New Jersey sex education program rests on certain questionable assumptions.

The first tenet is that children are "sexual from birth." Sex educators reject the classic notion of a latency period until approximately age twelve. They argue that you are "being sexual when you throw your arms around your grandpa and give him a hug."

Second, sex educators hold that children are sexually miseducated. Parents, in their view, have simply not done their job, so we need "professionals" to do it right. Parents try to protect their children, fail to affirm their sexuality, and even discuss sexuality in a context of moralizing. The media, they say, is also guilty of providing sexual misinformation.

Third, if miseducation is the problem, then sex education in the schools is the solution. Parents are failing miserably at the task, so "it is time to turn the job over to the schools. Schools occupy a safe middle ground between Mom and MTV."

Learning About Family Life is the curriculum used in New Jersey. While it discusses such things as sexual desire, AIDS, divorce, condoms, and masturbation, it nearly ignores such issues as abstinence, marriage, self-control, and virginity. One technique promoted to prevent pregnancy and STDs is

noncoital sex, or what some sex educators call outercourse. Yet there is good evidence to suggest that teaching teenagers to explore their sexuality through noncoital techniques will lead to coitus. Ultimately, outercourse will lead to intercourse.

Whitehead concludes that comprehensive sex education has been a failure. For example, the percent of teenage births to unwed mothers was 67 percent in 1980 and rose to 84 percent in 1991. In the place of this failed curriculum, Whitehead describes a better program. She found that "sex education works best when it combines clear messages about behavior with strong moral and logistical support for the behavior sought." One example she cites is the *Postponing Sexual Involvement* program at Grady Memorial Hospital in Atlanta, Georgia, which offers more than a "Just Say No" message. It reinforces the message by having adolescents practice the desired behavior and enlists the aid of older teenagers to teach younger teenagers how to resist sexual advances. Whitehead also found that "religiously observant teens" are less likely to experiment sexually, thus providing an opportunity for church-related programs to stem the tide of teenage pregnancy. The results of Whitehead's research are clear: abstinence is still the best form of sex education.

Is "Safe Sex" Really Safe?

At the 1987 World Congress of Sexologists, Theresa Crenshaw asked the audience, "If you had the available partner of your dreams and knew that person carried HIV, how many of you would have sex depending on a condom for your protection?" When they were asked for a show of hands, none of the 800 members of the audience indicated that they would trust the condoms. If condoms do not eliminate the fear of HIV-infection for sexologists and sex educators, why do we encourage the children of America to play STD Russian Roulette?

Are condoms a safe and effective way to reduce pregnancy and

STDs? To listen to sex educators you would think so. Every day sex education classes throughout this country promote condoms as a means of safe sex or at least safer sex. But the research on condoms provides no such guarantee.

For example, Texas researcher Susan Weller writing in the 1993 issue of *Social Science Medicine*, evaluated all research published prior to July 1990 on condom effectiveness. She reported that condoms are only 87 percent effective in preventing pregnancy and 69 percent effective in reducing the risk of HIV infection. This translates into a 31 failure rate in preventing AIDS transmission. And according to a study in the 1992 Family Planning Perspectives, 15 percent of married couples who use condoms for birth control end up with an unplanned pregnancy within the first year.

So why has condom distribution become the centerpiece of the U.S. AIDS policy and the most frequently promoted aspect of comprehensive sex education? For many years, the answer to that question was an a priori commitment to condoms and a safe sex message over an abstinence message. But in recent years, sex educators and public health officials have been pointing to one study which appeared to vindicate the condom policy.

The study was presented at the Ninth International Conference on AIDS held in Berlin on June 9, 1993. The study involved 304 couples with one partner who was HIV positive. Of the 123 couples who used condoms with each act of sexual intercourse, not a single negative HIV partner became positive. So proponents of condom distribution thought they had scientific vindication for their views.

Unfortunately that is not the whole story. Condoms do appear to be effective in stopping the spread of AIDS when used “correctly and consistently.” Most individuals, however, do not use them “correctly and consistently.” What happens to them? Well, it turns out that part of the study received much less attention. Of 122 couples who could not be taught to use

condoms properly, 12 became HIV positive in both partners. Undoubtably over time, even more partners would contract AIDS.

How well does this study apply to the general population? I would argue the couples in the study group were quite dissimilar from the general population. For example, they knew the HIV status of their spouse and therefore had a vested interest in protecting themselves. They were responsible partners and in a committed monogamous relationship. In essence, their actions and attitudes differ dramatically from teenagers and single adults who do not know the HIV status of their partners, are often reckless, and have multiple sexual partners.

Contrary to popular belief, condoms are not as reliable as public health pronouncements might lead you to think. Abstinence is still the only safe sex.

Only Abstinence-Only Programs Really Work

Less than a decade ago, an abstinence-only program was rare in the public schools. Today directive abstinence programs can be found in many school districts while battles are fought in other school districts for their inclusion or removal. While proponents of abstinence programs run for school board or influence existing school board members, groups like Planned Parenthood bring lawsuits against districts that use abstinence-based curricula arguing that they are inaccurate or incomplete. At least a dozen abstinence- based curricula are on the market, with the largest being *Sex Respect* (Bradley, Illinois) and *Teen-Aid* (Spokane, Washington).

The emergence of abstinence-only programs as an alternative to comprehensive sex education programs was due to both popularity and politics. Parents concerned about the ineffectiveness of the safe sex message eagerly embraced the message of abstinence. And political funding helped spread the message and legitimize its educational value. The Adolescent

Family Life Act enacted in 1981 by the Reagan Administration created Title XX and set aside $2 million a year for the development and implementation of abstinence-based programs. Although the Clinton Administration later cut funding for abstinence programs, the earlier funding in the 1980s helped groups like Sex Respect and Teen-Aid launch abstinence programs in the schools.

Parents and children have embraced the abstinence message in significant numbers. One national poll by the University of Chicago found that 68 percent of adults surveyed said premarital sex among teenagers is “always wrong.” A 1994 poll for USA Weekend asked more than 1200 teens and adults what they thought of “several high profile athletes [who] are saying in public that they have abstained from sex before marriage and are telling teens to do the same.” Seventy-two percent of the teens and 78 percent of the adults said they agree with the pro-abstinence message.

Their enthusiasm for abstinence-only education is well founded. Even though the abstinence message has been criticized by some as naive or inadequate, there are good reasons to promote abstinence in schools and society.

1. Teenagers want to learn about abstinence. Contrary to the often repeated teenage claim, not “everyone’s doing it.” A 1992 study by the Centers for Disease Control found that 43 percent of teenagers (age 14 to 17) had engaged in sexual intercourse at least once. Put another way, the latest surveys suggest that a majority of teenagers are not doing it.

2. Abstinence prevents pregnancy. Proponents of abstinence-only programs argue that it will significantly lower the teenage pregnancy rate and cited lots of anecdotes and statistics to make their case. For example, the San Marcos Junior High in San Marcos, California, adopted an abstinence-only program developed by Teen- Aid. The curriculum dropped the school’s pregnancy rate from 147 to 20 within a two-year

period. An abstinence-only program for girls in Washington, D.C., has seen only one of 400 girls become pregnant.

3. Abstinence prevents sexually transmitted diseases (STDs). After more than three decades, the sexual revolution has taken lots of prisoners. Before 1960 there were only two STDs that doctors were concerned about: syphilis and gonorrhea. Today, there are more than 20 significant STDs ranging from the relatively harmless to the fatal. Twelve million Americans are newly infected each year, and 63 percent of these new infections are in people less than 25 years old. Eighty percent of those infected with an STD have absolutely no symptoms.

The conclusion is simple: abstinence is the only truly safe sex.

Baby Boomerangs

In the last few years, newspapers and newsmagazines have been full of stories about baby boomers returning to church. The purpose of this essay is to take a look at those stories and statistics and see what we can make of all of this hoopla. Is there a spiritual revival taking place? What caused the exodus and what is bringing about the return? These are just a few questions we will address.(1)

The baby boomers returning to church have been dubbed “baby boomerangs.” Most of them grew up in religious households. In fact, about 96 percent had some religious instruction in their early years. But many jettisoned their religious beliefs when

they became adults because spirituality seemed irrelevant in the secular, pluralistic culture of modern life. Now, like boomerangs return to the point of their departure, many baby boomers are returning to church.

At least two processes were responsible for their exodus from organized religion. The process of secularization in modern society removed religious ideas and institutions from the dominant place they had in previous generations. Religious ideas were less meaningful, and religious institutions were more marginal in their influence on the baby boom generation. To their parents' dismay, most boomers dropped out of traditional religion for at least two years during their adolescence and adulthood.

The process of pluralization in their world rapidly multiplied the number of world views, faiths, and ideologies. This increase in choice led naturally to a decrease in commitment and continuity. Many boomers during their adolescence and early adulthood went through what might be best called serial-conversions. Spiritually hungry for meaning, they dined heartily at America's cafeteria for alternative religions: est, gestalt, meditation, scientology, bioenergetics, and the New Age. Others sought spiritual peace through 12-step programs for alcoholics, workaholics, even chocoholics. This have-it-your-way, salad-bar spirituality has been high on choices and options but low on spiritual commitment.

One author wrote, "Although there are those who try to follow the demanding precepts of traditional religion, most baby boomers find refreshment in a vague religiosity which does not interfere in any way with how they live."

As this generation passes through midlife, it will inevitably look to the future more with anxiety than anticipation. Boomers are asking, Who will care for me? Will I be able to provide for me and my family?

And these questions are also mingled with questions of identity. Who am I? Where am I going? Is this all there is to life? These questions have an underlying spiritual dimension and are not easily answered in a secular world nor in a mystical world filled with bland spirituality.

Certainly this generation has sought answers in self-help programs and community activities, but something more than social changes and technology are necessary. As one commentator said, “There is a feeling of being lost and looking for something greater. People know that technology hasn’t worked for them. It hasn’t done anything for their souls.”

This is, in part, why many baby boomers have begun to return to church. But is this a true spiritual revival? Furthermore, what about the large segment of this generation that is still outside the church and seemingly uninterested in coming back? What could the church do to reach out to those boomers who are still outside the church?

Seekers of Experiences

As in other endeavors, baby boomers have been seekers: seekers of pleasure, seekers of experience, seekers of freedom, seekers of wealth, and yes, seekers of spirituality. But unlike their parents, boomers’ search for spirituality took them down unpredictable paths. This generation has been eclectic in its religious

experiences where brand loyalty is unheard of and the customer is king. While some have stayed true to the “faith of their fathers,” most mix traditional religion with New Age mysticism and modern self-help psychologies in a flexible and syncretistic manner.

Tracking this generation’s values and attitudes toward religion and spiritual issues is not easy, if for no other

reason than the lack of substantial research. Most of the significant research on boomer attitudes toward religion have been done within the last ten years. Consider this comment from the late 1980s: “When the first of its number reached 40 last summer, the Baby Boom once again entered the spotlight. But for all the coverage, including a 10-page cover story in *Time* and [Landon] Jones’ 350-page book, little more than a paragraph was written on the role of religion in the lives of the Baby Boom generation.” Fortunately, more research since then has provided a better perspective on this generation’s attitudes and perspectives on religion.

Boomers can be divided into three religious subcultures: loyalists, returnees, and dropouts. Loyalists tend to be social conservatives. They had better relations with their parents and tended to grow up in stricter homes. Loyalists never really identified with the counterculture and never left their church or synagogue.

At the other extreme are the dropouts. They had less confidence in the country when growing up and had more conflicts with parents. Traditional religion was, to them, out of touch with modern life. They have never come back to church and pursue spirituality (if at all) in a personal and individual way.

Between the loyalists and the dropouts are the returnees. They were and are middle-of-the-road types who were less alienated than the dropouts but more disaffected than the loyalists. They left church or synagogue and have returned but often with some ambivalence.

Each religious subculture manifests differences in spiritual styles and commitment but all are affected to some degree by their experiences in the counterculture. Though their views are different from one another, collectively the three boomer subcultures are very different from their parents. For example, few in the returnees subculture actually consider

themselves religious and do not hold to traditional views of God even though they may actually attend religious services on a regular basis. Returnees are much less likely to engage in traditional religious activities (daily prayers, saying grace at meals, reading the Bible). Almost one- fourth of returnees and nearly one-fifth of loyalists say they believe in reincarnation.

In short, baby boomers are very different from their parents in terms of spiritual commitment and biblical understanding. And churches and Christian organizations that reach out to this generation must be aware of these differences if they are to be effective.

"Teach Your Children Well…"

Those baby boomers who have returned to church—the so-called "baby boomerangs"—have returned for one of two major reasons: children or spiritual restlessness. Boomers concerned about the moral and spiritual upbringing of their children have made the spiritual pilgrimage back to their religious roots. Members of this generation may say they do not believe in absolute values, but frequently their relativistic world view collapses when they have children. They don't want their kids growing up without any moral direction. Church suddenly becomes a much more important place. Gallup surveys, for example, show that nearly nine in ten Americans say they want religious training for their kids, even though fewer than seven in ten with children (ages 4-18) say they are currently providing such training.

The boomerang phenomenon is not peculiar to baby boomers. Church historians have found a predictable pattern of church attendance that has affected numerous generations. Typically after high school young adults drop out of church and often don't drop back into church until they have children. In that regard, boomers are no different than generations that preceded them.

Unlike previous generations, boomers prolonged the cycle by postponing marriage and children. Getting married later and having children later essentially extended their absence from church. And this extended absence allowed many of them to get more set in their ways. A generation used to free weekends and sleeping in on Sunday is less like to make church attendance a priority.

Kids begin to rearrange those priorities. Statistically, it has been shown that the presence of children in a family makes a significant difference in the likelihood of church attendance. One survey found that married baby boomers are nearly three times more likely to return to church if they have children. Children do indeed seem to be leading their parents back to church.

Another reason for boomers returning to church is spiritual restlessness. Sixteen hundred years ago, St. Augustine acknowledged, "We were made for thee, O God, and our hearts are restless until they find rest in thee." Social commentators have generally underestimated the impact of this generation's restless desire for meaning and significance. Ken Woodward, religion editor for *Newsweek* magazine believes "That search for meaning is a powerful motivation to return to the pews. In the throes of a midlife re-evaluation, Ecclesiastes—'A time for everything under heaven'—is suddenly relevant." George Gallup has found that two thirds of those who dropped out of a traditional church (left for two years or more) returned because they "felt an inner need" to go back and rediscover their religious faith.

For these and other less significant reasons, baby boomers are returning to church though not in the numbers sometimes reported in the media. All of this attention to returning boomers fails to take into account that more than forty percent of baby boomers have not returned to church. And while many are celebrating those coming in the front door, they shouldn't overlook the stream of boomers leaving the church

out the back door. They are bored, disillusioned, or restless and need to be reached more effectively if the church is to make a difference in the 1990s and the 21st Century.

"If It Feels Good…"

Although much has been made of the baby boomerang phenomenon, many more are skeptical of church as well as other institutions such as government, military, and schools. While they are consistent with previous generations in their boomerang cycle, "statistics on church attendance, when viewed up close, reveal dramatic and distinctive patterns along generational lines." The data show:

- Throughout their lives, Americans born during the Depression have been more faithful than later generations in their church/synagogue attendance.
- "War babies" [born 1939-45] dropped out of church as they entered their twenties during the turbulent sixties, and stayed away. The twin disillusionments stemming from Vietnam and Watergate made them more suspicious of institutions—the church included. Only recently, as they approach and pass midlife, are they trickling back to church.
- "Baby boomers" [born 1946-64] also dropped out of the church in their twenties, but now, in their thirties and early forties, they are returning to the ranks of the faithful. The real boom in church attendance is coming from this generation."(2)

Nevertheless, boomers are returning to church in increasing numbers. By the early 1980s the number of leading edge baby boomers who attend church regularly rose nearly ten percent (33.5% to 42.8%) and continued to rise through the decade.

Will this revitalized interest in religion make a difference in society? This is a question many social commentators are considering. "Will the churches and synagogues provide the

kind of training necessary to keep the faith vital—or will the churches merely mirror the culture?" asks sociologist Os Guinness. "The natural tendency of the baby boomers is to be laissez faire socially. Will their return to faith make any decisive difference in their personal and social ethics, or will their religious commitment be [simply] a variant of their social philosophy?"

Traditionally boomers have been samplers with little brand loyalty. They don't feel bound to the denomination of their youth and search for experiences (both spiritual and otherwise) that meet their needs. It is not uncommon for families to attend different churches each week (or on the same day) to meet their perceived spiritual needs. They aren't bashful about attending a particular church to take advantage of a special seminar or program and then picking up and moving to another church when those programs seem inviting.

Many boomers may be interested in spiritual issues but see no need to attend church. George Gallup refers to this characteristic in his book *The Unchurched in America—Faith Without Fellowship*. Such religious individualism stems both from American individualism that has been a part of this country for centuries and this generation's desire for flexibility and individuality. The have-it-your-way attitude in every area of a boomer's life has given rise to this religious individualism.

Boomers approach religion and spirituality differently than previous generations. They embrace a faith that is low on commitment and high on choice. As one commentator noted, "They are comfortable with a vague, elastic faith that expands to fill the world after a pleasant Christmas service and contracts to nothing when confronted with difficulties." No wonder many boomers are starting to embrace religious beliefs that previous generations would never have considered.

Spiritual hunger

Spiritually hungry boomers looking for nourishment for their souls have already tried a variety of selections from America's spiritual cafeteria. They will probably continue to do so. Lonely, isolated in boxes in the suburbs, often hundreds of miles from their families, boomers are facing significant psychological issues in the midst of busy lives that sap their emotional and spiritual resources. Beneath this isolation and turmoil is a restless desire for spirituality.

Some will try to meet these needs by dabbling in the New Age Movement. And if the churches do not meet their real and perceived needs, this trickle may turn into a torrent. The New Age Movement is attractive to the spiritually naive and institutionally cynical. If the church fails, then the New Age will thrive.

This may be the greatest challenge for the Christian church. Can church leaders woo baby boomers back to the flock? Can the church challenge boomers to a greater level of religious commitment in their lives? Can the church provide religious training necessary to keep boomers' faith vital? These are important questions.

Churches need to challenge boomers to deeper faith and greater religious commitment, but surveys and statistics show that churches themselves may be suffering from the same maladies as baby boomers. Church members like to believe that they are more spiritually committed and live lives different from the unchurched. The data show otherwise.

Approximately 40 percent of America attends church or other religious services on a fairly regular basis. But George Gallup has found that fewer than 10 percent of Americans are deeply committed Christians. Those who are committed "are a breed apart. They are more tolerant of people of diverse backgrounds. They are more involved in charitable activities.

They are more involved in practical Christianity. They are absolutely committed to prayer."

Numerous surveys show that most Americans who profess Christianity don't know the basic teachings of the faith. Such shallow spirituality makes them more susceptible to the latest fad, trend, or religious cult. Gallup notes that not being grounded in the faith means they "are open for anything that comes along." For example, studies show that New Age beliefs "are just as strong among traditionally religious people as among those who are not traditionally religious."

Lack of commitment to a faith position and to a lifestyle based upon biblical principles also extends to church attendance and instruction. Eight in ten Americans believe they can arrive at their own religious views without the help of the church.

Commitment to biblical instruction is not high either. George Gallup says that Americans are trying to do the impossible by "being Christians without the Bible." He goes on to say that, "We revere the Bible, but we don't read it." Pastors and pollsters alike have been astounded by the level of biblical illiteracy in this nation.

Churches that reach out to baby boomers will have to shore up their own spiritual commitment as they challenge this generation to a higher level of commitment and discipleship. If they are successful, then their congregations will grow. If they aren't then this generation will go elsewhere to satisfy its spiritual hunger.

Financial Security for the Future

Kerby Anderson looks at our financial future, especially of baby boomers, discussing savings, corporate pensions, Social Security and retirement.

What kind of financial security can you expect in the future? The answer to that question may depend on when you were born. The generation currently entering retirement will do much better as a group than the baby boom generation following it.

A major reason is demographics. The baby boom was preceded, and more importantly, succeeded by consecutive years of fewer births. Thirty-five percent more Americans were born during the baby boom than during the previous nineteen years. And 12 percent more were born than during the subsequent nineteen years. This nineteen-year blip in fertility has created more than just an oddity in social statistics. It has clouded the financial future of baby boomers. The elderly are supported, especially during the waning years of their old age, by members of the younger generation. The baby boom was

immediately followed by a baby bust, or what many commentators have labeled a “birth dearth.” This disproportionate ratio between baby boomers and baby busters raises questions about the boom generation’s future and suggests it will face an impending crisis of financial security.

Concern arises from both economic and demographic realities. The harsh economic reality in the 1990s is the federal deficit which mushroomed during the 1980s. Aggravating this economic situation are also such issues as trade deficits, increased taxes, higher oil prices, and an inevitable downturn in the economy.

A survey released by the International Association of Financial Planning found that “the long term psyche of the American public is depressed,” with significant majorities fearing a resurgence of high inflation and worrying about the chances for a deep recession. But the more important issue is not economics but how demographics affect economics. The sheer size of the boom generation has had a negative impact on its members. Paul Hewitt of the Retirement Policy Institute put it this way:

> The baby boom as a generation has been its own worst enemy. Whenever we wanted anything the price went up, and when we sold the price went down. So we got less for our labor and paid more for our houses. When we want to sell those houses the price will go down, and when we want medical care in old age, prices will go up.

Boomers in general, and leading-edge boomers in particular, find themselves part of what has become called “the triple-squeeze generation.” The more than 25 percent of Americans between the ages of 35 and 44 are finding their own retirement being squeezed out by the college costs of their children and the long-term health care costs of their aging parents. Sixty-six percent of baby boomers surveyed by the International Association of Financial Planning said “providing long-term

care fora parent would affect their ability to save for their children's education" and would no doubt also affect their ability to save for their own retirement.

Commentators have also referred to these people as the "sandwich generation" because they are sandwiched between an older generation dependent upon them for elder care and a younger generation dependent upon them for housing and education. Surely this is one generation that needs to take a hard look at its financial future. The economic and demographic realities may seem dismal, but they will be much worse if we fail to apply biblical principles to our finances. The key to financial security for most Americans has been the three-legged stool of savings, pensions, and Social Security. Unfortunately, economic termites threaten the strength of that stool.

Savings

The first leg on the retirement stool is savings. The boomers are justly concerned about the savings (or more to the point, the lack of savings) they have put away so far for their retirement. A survey of leading-edge boomers found that six out of ten expressed great concern about being able to meet all of their financial responsibilities, and 62 percent fear that they will outlive their retirement savings.

But they aren't the only ones concerned. A survey by the American Academy of Actuaries echoed boomers' fears. Seventy-two percent of pension-fund actuaries polled predict that half the baby boom won't have the wherewithal to retire at age 65.

How much have baby boomers saved so far? Well, not very much if a recent survey is any indication. When a group of 35- to 49-year- olds were asked if they could come up with three thousand dollars in a few days without borrowing or using a credit card, 49 percent said they could and 49 percent said they couldn't. Not surprisingly a smaller percentage (only 29

percent) of the 18- to 24-year-olds had the three thousand dollars.

The inability of so many boomers to come up with the sum of three thousand dollars illustrates two things. First, it shows how little (if anything) they have in savings or investments. Second, it demonstrates how much many of them are in debt. The first leg of the three-legged stool is in awful shape because, for many in the boom generation, savings are decreasing while debt is increasing. The reasons for boomer debt are fairly simple. First, the boomers had great expectations for themselves and were often willing to go deeply in debt in order to finance the lifestyle they had chosen for themselves. Second, they had the misfortune of entering the consumer world at the time when wages were stagnant and when most of the goods and services they craved were hit by inflation. This further fueled consumer borrowing, which became both a cause and a consequence of their downward mobility.

Between 1970 and 1983, the percentage of boomer families paying off consumer debt increased from two-thirds to three-fourths. Of families in debt in 1983, the average amount of debt was nearly five thousand dollars.

Families in debt usually are not saving. If they had any financial resources to save and invest, they would be wise to first retire their high interest consumer debt. In 1984, more than a third of all households headed by a person under thirty-five had no savings whatsoever on deposit with banks and other financial institutions, aside from non-interest-paying checking accounts.

The solution to this problem is simple: Get out of debt and put money into savings and retirement. Now while this may be easy to say, it is difficult for the current generation to do. Baby boomers’ expectations frequently exceed their income, and the changing economic and demographic realities place them in a precarious position. But if this generation wants to have a

more secure financial future, it must take appropriate financial measures now.

Corporate Pensions

In the past, there used to be an unwritten agreement between a company and an individual. If you faithfully worked for the company, the company would take care of you in your retirement. But this tacit agreement has broken down for two reasons.

First, many of these companies lack the financial resources to take care of the baby boom generation. Consolidation of some companies and the bankruptcies of many others put pensions in jeopardy. Other companies heavily invested in speculative schemes by thrifts and junk bonds, and their portfolios rest on shaky ground. In other cases, the current financial resources seem adequate but have yet to be tested when the millions of baby boomers begin to retire. Second, many baby boomers have not spent enough time with any one company to earn a significant pension. It was not uncommon for the parents of baby boomers to have worked for a single company for more than twenty years. Baby boomers, on the other hand, change jobs if not career paths with unprecedented frequency.

This apparent restlessness is born from both choice and necessity. Boomers are much less likely to stay in a job that does not enhance personal development and self-expression. Unlike their fathers, who would often remain with a company "for the sake of the family," the boom generation is much more likely to move on.

Boomers also change jobs out of necessity. They find themselves competing with each other for fewer upper-management positions for a number of reasons. First, companies have thinned their management ranks. Most of this restructuring was done in the 1980s to make companies more efficient. The rest was a natural result of buyouts,

takeovers, and consolidation leaving fewer structural layers in upper management and fewer jobs.

Second, boomers crowded into middle-management ranks at the same time restructuring was taking place. The leading-edge boomers in their prime career years are finding themselves on career plateaus and becoming dissatisfied. Many wonder if they will ever make it to the corner office or the executive suite.

Third, there was a boom of business school graduates. The first boomers who graduated with MBAs were often ridiculed by classmates in other academic disciplines. But this initial condemnation gave way to active pursuit, and the number of business graduates quickly proliferated. As supply has outstripped demand, this ambitious group with heightened expectations finds itself frustrated and constantly looking for a job change.

All of these factors have put this generation in a precarious position. By and large, they are not saving and have inadequate pensions to give them a secure financial future. So many are trusting that Social Security will be there for them when they retire. But will it?

Social Security

The impending Social Security debacle is complex and the subject of whole books. But the basic issue can be illustrated by once again looking at the demographic impact of the boom generation.

When Social Security began in the mid 1930s, the ratio of workers to recipients was ten to one and life expectancy was two years below retirement age. The pay-as-you-go system could work with those kinds of numbers.

But two fundamental demographic changes threaten to send Social Security off a cliff. First is the “senior boom.” Advances in modern medicine have raised life expectancy by 28

years in just this century. Today the median age is already 32 and still climbing. Some demographers see the median age reaching as high as 50 years old. One has to wonder about the stability of Social Security in a country where half of the people qualify for membership in the American Association of Retired Persons.

The second demographic change is the ratio between the baby boom generation and the baby bust generation. The smaller generation following the boom generation will be called upon to support Social Security when boomers retire. The system will face incredible strains through the next few decades as the ratio of workers to Social Security beneficiaries continues to decline.

Both demographic changes are relevant. Americans are living longer, and ratios between generations are skewed. These two changes are certain to transform the current pay-as-you-go system into nothing more than an elaborate Ponzi scheme by the twenty-first century. The solutions to the Social Security crisis are few and all politically difficult to achieve. Either you have to change the supply of contributions or the demand of the recipients. Increasing the supply of contributors could be achieved by increasing the birth rate (unlikely, and probably too little too late) or allowing more immigration of workers who could contribute to Social Security. The only other way to increase the supply of contributions is to increase FICA payments. But there will have to be an upper limit on how much Americans can be taxed. If benefits stay at their current levels, workers in the year 2040 could find Social Security taking as much as 40 percent of their paychecks.

Decreasing demand would require trimming benefits. Current recipients benefit most from Social Security. A retiree on Social Security today recovers everything he paid into the system in about four years. On the other hand, few boomers will ever get the amount of money they paid into the system.

Some politicians have suggested trimming benefits to current recipients. Others suggest applying a means test to wealthy recipients or those who receive other pension income. Neither proposal has much likelihood of passage.

More likely, Congress will be forced to trim future benefits. Congress has already increased the age of retirement and may induce workers to stay on the job until age 70. Another solution would be to provide the biggest tax breaks for workers to fund their own retirement through IRAs or Keoghs.

Obviously the solutions are not popular, but the alternative is a collapse of the Social Security system in the next decade. If something isn't done, the demographic realities will destroy the system.

Retirement

Although this generation grew up assuming retirement would be the norm, the changing social and economic conditions we have discussed may force a rethinking of that basic assumption. After all, the idea of retirement historically is of recent origin.

When Social Security was first adopted in 1935, life expectancy was below 63, a full two years under the retirement age. Retirement was for the privileged few who lived long enough to enjoy the meager financial benefits from the system.

Even as late as the 1950s, the contemporary image we have today of retirement communities and the elderly sightseeing in recreational vehicles did not exist. Retirement still did not exist as an institution. Nearly half the men over age 65 were still in the workforce.

Polls taken during the 1950s and early 1960s showed that most Americans desired to work for as long as they could and saw retirement merely for the disabled. Today, however, most Americans look forward to their retirement as a time to

travel, pursue personal interests, and generally indulge themselves. Yet the demographic landscape suggests we might have to revise our current images of retirement.

As baby boomers slowly jog towards Golden Pond, they will likely be the largest generation of senior citizens in history, both in absolute size and in relative proportion to the younger generation. By the year 2000, the oldest boomers could be taking early retirement. The number of workers and dependents retired by 2025 could swell to as many as 58 million workers and dependents, more than double the current number of retirees.

These large numbers are certain to precipitate a “retirement crisis” for two reasons. First, people are living longer. We have raised the life expectancy by 28 years. During most of human history, only one in ten lived to the age of 65. Today eight out of every ten Americans zoom past their 65th birthday.

Second, the burden of providing retirement benefits will fall upon the younger, (and more to the point) smaller generation born after the baby boom. Never will so few be required to fund the retirement of so many. When Social Security was adopted in 1935, there were ten workers for every person over age 65. That ratio shrank to six to one in the 1970s.

Today there are about 3.4 working Americans to support each retiree. But by the time the last boomer hits retirement age in 2029, the ratio of workers to retirees will drop to less than two to one. Obviously, baby boomers face much greater uncertainty than their parents did when they entered into the years now seen as the time of retirement.

This next generation may even decide to reject the idea of retirement, choosing instead to enrich themselves with meaningful work all of their lives. Yet such an idyllic vision could quickly be crushed by the harsh reality of failing

health. Working until you are 70 or beyond may not be physiologically possible for all people.

No wonder a chorus of Cassandras is predicting financial disaster in the next century. But significant changes can be made now to avert or at least lessen a potential crisis in the future. Wise investment according to biblical principles now is absolutely necessary to prepare for this uncertain future. The future really depends on what this generation does in the 1990s to get ready for the Retirement Century.

Drug Abuse – A Biblical Analysis

In the 1960s, the drug culture became a part of American society. But what was once the pastime of Timothy Leary's disciples and the habit of poverty-stricken junkies went mainline to the middle class. A culture that once lived in the safe world of Ozzie and Harriet awoke to the stark realization that even their son Ricky used cocaine.

The statistics are staggering. The average age of first alcohol use is 12, and the average age of first drug use is 13. According to the National Institute on Drug Abuse, 93 percent of all teenagers have some experience with alcohol by the end of their senior year of high school, and 6 percent drink daily. Almost two-thirds of all American young people try illicit drugs before they finish high school. One out of sixteen seniors smokes marijuana daily, and 20 percent have done so for at least a month sometime in their lives. But Americans have changed their minds about drugs. A Gallup poll

released on the 20th anniversary of Woodstock showed that drugs, once an integral part of the counterculture, are considered to be the number-one problem in America. Two decades before, young people tied drugs to their “search for peace, love and good times.” But by 1989, Americans associated drugs with “danger, crime and despair.” A similar conclusion could be found among the nation’s teenagers. A Gallup poll of 500 teens found that 60 percent said concern over drug abuse was their greatest fear—outranking fear of AIDS, alcohol, unemployment, and war.

Nationwide surveys indicate that about 90 percent of the nation’s youth experiment with alcohol—currently teenagers’ drug of choice. An annual survey conducted by the University of Michigan has revealed that over 65 percent of the nation’s seniors currently drink, and about 40 percent reported a heavy drinking episode within the two weeks prior to the survey.

Another survey released by the University of Colorado shows that the problem of drug use is not just outside the church. The study involved nearly 14,000 junior-high and high-school youth.It compared churched young people with unchurched young people and found very little difference.

For example, 88 percent of the unchurched young people reported drinking beer compared with 80 percent of churched young people. When asked how many had tried marijuana, 47 percent of the unchurched young people had done so compared with 38 percent of the churched youth. For amphetamines and barbiturates, 28 percent of the unchurched youth had tried them as well as 22 percent of the churched young people. And for cocaine use, the percentage was 14 percent for unchurched and 11 percent for churched youth.

Types of Drugs

Alcohol

Alcohol is the most common drug used and abused. It is an intoxicant that depresses the central nervous system and can lead to a temporary loss of control over physical and mental powers. The signs of drunkenness are well known: lack of coordination, slurred speech, blurred vision, and poor judgment.

The amount of alcohol in liquor is measured by a “proof rating.” For example, 45 percent pure alcohol would be 90-proof liquor. A twelve-ounce can of beer, four ounces of wine, and a one-shot glass of 100-proof liquor all contain the same amount of alcohol.

In recent years, debate has raged over whether alcoholism is a sin or a sickness. The Bible clearly labels drunkenness a sin (Deut. 21:20-21; 1 Cor. 6:9-10; Gal. 5:19-20), but that does not mitigate against the growing physiological evidence that certain people’s biochemistry makes them more prone to addiction.

Some studies suggest that the body chemistry of alcoholics processes alcohol differently than that of non-alcoholics. Acetaldehyde is the intermediate by-product of alcohol metabolism, but the biochemistry of some people make it difficult to process acetaldehyde into acetate. Thus, acetaldehyde builds up in the body and begins to affect a person’s brain chemistry. The chemicals produced (called isoquinolines) act very much like opiates and therefore contribute to alcoholism.

Other studies have tried to establish a connection between certain types of personalities and alcoholism. The general conclusion has been that there is no connection. But more recent studies seem to suggest some correlation between personality type and drug abuse. One personality type that seems to be at risk is the anti-social personality (ASP), who

is often charming, manipulative, impulsive,and egocentric. ASPs make up 25 percent of the alcohol- and drug-abuse population, yet only comprise about 3 percent of the general population.

The social costs of alcohol are staggering. Alcoholism is the third largest health problem (following heart disease and cancer). There are an estimated 10 million problem drinkers in the American adult population and an estimated 3.3 million teenage problem drinkers. Half of all traffic fatalities and one-third of all traffic injuries are alcohol-related. Alcohol is involved in 67 percent of all murders and 33 percent of all suicides.

Alcohol is also a prime reason for the breakdown of the family. High percentages of family violence, parental abuse and neglect, lost wages, and divorce are tied to the abuse of alcohol in this country. In one poll on alcohol done for *Christianity Today* by George Gallup, nearly one-fourth of all Americans cited alcohol and/or drug abuse as one of the three reasons most responsible for the high divorce rate in this country.

Since the publication of Janet Geringer Woitiz's book *Adult Children of Alcoholics*, society has begun to understand the long-term effect of alcoholism on future generations. Children of Alcoholics (COAs) exhibit a number of traits including guessing what normal behavior is, having difficulty following a project from beginning to end, judging themselves without mercy, and having difficulty with intimate relationships.

The toxic effects of alcohol are also well known: they often cause permanent damage to vital organs like the brain and the liver. Death occurs if alcohol is taken in large enough amounts. When the blood alcohol level reaches four-tenths of 1 percent, unconsciousness occurs; at five-tenths of 1 percent, alcohol poisoning and death occurs.

Marijuana

Marijuana is produced from the hemp plant (*Cannabis sativa*), which grows well throughout the world. Marijuana has been considered a "gateway drug" because of its potential to lead young people to experiment with stronger drugs such as heroin and cocaine. In 1978, an alarming 10 percent of all high-school seniors smoked marijuana every day. Although that percentage has dropped significantly, officials still estimate that about one-third of all teenagers have tried marijuana.

Marijuana is an intoxicant that is usually smoked in order to induce a feeling of euphoria lasting two to four hours. Physical effects include an increase in heart rate, bloodshot eyes, a dry mouth and throat, and increased appetite.

Marijuana can impair or reduce short-term memory and comprehension. It can reduce one's ability to perform tasks requiring concentration (such as driving a car). Marijuana can also produce paranoia and psychosis.

Because most marijuana users inhale unfiltered smoke and hold it in their lungs for as long as possible, it causes damage to the lungs and pulmonary system. Marijuana smoke also has more cancer-causing agents than tobacco smoke. Marijuana also interferes with the immune system and reduces the sperm count in males.

Cocaine

Cocaine occurs naturally in the leaves of coca plants and was reportedly chewed by natives in Peru as early as the sixth century. It became widely used in beverages (like Coca-Cola) and medicines in the nineteenth century but was restricted in 1914 by the Harrison Narcotics Act.

Some experts estimate that more than 30 million Americans have tried cocaine. Government surveys suggest there may be as many as 6 million regular users. Every day some 5,000 neophytes

sniff a line of coke for the first time.

When the popularity of cocaine grew in the 1970s, most snorted cocaine and some dissolved the drug in water and injected it intravenously. Today the government estimates more than 300,000 Americans are intravenous cocaine users.

In recent years, snorting cocaine has given way to smoking it. Snorting cocaine limits the intensity of the effect because the blood vessels in the nose are constricted.Smoking cocaine delivers a much more intense high. Smoke goes directly to the lungs and then to the heart.On the next heartbeat, it is on the way to the brain. Dr. Anna Rose Childress at the University of Pennsylvania notes that "you can become compulsively involved with snorted cocaine. We have many Hollywood movie stars without nasal septums to prove that." But when cocaine is smoked "it seems to have incredibly powerful effects that tend to set up a compulsive addictive cycle more quickly than anything that we've seen."

Cocaine is a stimulant and increases heart rate, restricts blood vessels, and stimulates mental awareness. Users say it is an ego- builder. Along with increased energy comes a feeling of personal supremacy: the illusion of being smarter, sexier, and more competent than anyone else. But while the cocaine confidence makes users feel indestructible, the crash from cocaine leaves them depressed, paranoid, and searching for more.

Until recently, people speaking of cocaine dependence never called it an addiction. Cocaine's withdrawal symptoms are not physically wrenching like those of heroin and alcohol. Yet cocaine involves compulsion, loss of control, and continued use in spite of the consequences.

The death of University of Maryland basketball star Len Bias and an article by Dr. Jeffery Isner in the *New England Journal of Medicine* that same year have established that cocaine can

cause fatal heart problems. These deaths can occur regardless of whether the user has had previous heart problems and regardless of how the cocaine was taken.

Cocaine users also describe its effect in sexual terms. Its intense and sensual effect makes it a stronger aphrodisiac than sex itself. Research at UCLA with apes given large amounts of cocaine showed they preferred the drug to food or sexual partners and were willing to endure severe electric shocks in exchange for large doses. The cocaine problem in this country has been made worse by the introduction of crack:ordinary coke mixed with baking soda and water into a solution and heated. This material is then dried and broken into tiny chunks that resemble rock candy. Users usually smoke these crack rocks in glass pipes.

Crack (so-called because of the cracking sound it makes when heated) has become the scourge of the war on drugs.A single hit of crack provides an intense, wrenching rush in a matter of seconds. Because crack is absorbed rapidly through the lungs and hits the brain within seconds, it is the most dangerous form of cocaine and also the most addicting.

Another major difference is not physiological but economic. According to Dr. Mark Gold, founder of the nationwide cocaine hotline, the cost to an addict using crack is one-tenth the cost he would have paid for the equivalent in cocaine powder just a decade ago. Since crack costs much less than normal cocaine, it is particularly appealing to adolescents. About one in five 12th graders has tried cocaine, and that percentage is certain to increase because of the price and availability of crack.

Hallucinogens

The drug of choice during the 1960s was LSD. People looking for the “ultimate trip” would take LSD or perhaps peyote and experience bizarre illusions and hallucinations.

In the last few decades,these hallucinogens have been replaced by PCP (*Phencyclidine*), often known as “angel dust” or “killer weed.” First synthesized in the 1950s as an anesthetic, PCP was discontinued because of its side effects but is now manufactured illegally and sold to thousands of teenagers.

PCP is often sprayed on cigarettes or marijuana and then smoked. Users report a sense of distance and estrangement. PCP creates body-image distortion, dizziness, and double vision. The drug distorts reality in such a way that it can resemble mental illness. Because the drug blocks pain receptors, violent PCP episodes may result in self-inflicted injuries.

Chronic PCP users have persistent memory problems and speech difficulties. Mood disorders, such as depression, anxiety, and violent behavior, are also reported. High doses of PCP can produce a coma that can last for days or weeks.

Synthetic Drugs

The latest scourge in the drug business has been so-called designer drugs. These synthetic drugs, manufactured in underground laboratories, mimic the effects of commonly abused drugs. Since they were not even anticipated when our current drug laws were written, they exist in a legal limbo, and their use is increasing. One drug is MDMA, also know as “Ecstasy.” It has been called the “LSD of the ’80s” and gives the user a cocaine-like rush with a hallucinogen euphoria. Ecstasy was sold legally for a few years despite National Institute on Drug Abuse fears that it could cause brain damage. In 1985 the DEA outlawed MDMA, although it is still widely available.

Other drugs have been marketed as a variation of the painkillers Demerol and Fentanyl. The synthetic variation of the anesthetic Fentanyl is considered more potent than heroin and is known on the street as “synthetic heroin”and “China White.”

Designer drugs may become a growth industry in the ’90s.

Creative drug makers in clandestine laboratories can produce these drugs for a fraction of the cost of smuggled drugs and with much less hassle from law enforcement agencies.

Biblical Analysis

Some people may believe that the Bible has little to say about drugs, but this is not so. First, the Bible has a great deal to say about the most common and most abused drug—alcohol. Scripture admonishes Christians not to be drunk with wine (Eph. 5:18) and calls drunkenness a sin (Deut. 21:20-21; Amos 6:1; 1 Cor. 6:9-10; Gal. 5:19-20). The Bible also warns of the dangers of drinking alcohol (Prov. 20:1; Isaiah 5:11; Hab. 2:15-16), and, by implication, the dangers of taking other kinds of drugs.

Second, drugs were an integral part of many ancient Near East societies. For example, the pagan cultures surrounding the nation of Israel used drugs as part of their religious ceremonies. Both the Old Testament and New Testament condemn sorcery and witchcraft. In those days, drug use was tied to sorcery (the word translated "sorcery" comes from the Greek word from which we get the English words *pharmacy* and *pharmaceutical*). Drugs were prepared by a witch or shaman. They were used to enter into the spiritual world by inducing an altered state of consciousness that allowed demons to take over the mind of the user. In our day, many use drugs merely for so-called recreational purposes, but we cannot discount the occult connection.

Galatians 5:19-21 says:

> *The acts of the sinful nature are obvious: sexual immorality, impurity and debauchery, idolatry and witchcraft [which includes the use of drugs]; hatred, discord, jealousy, fits of rage, selfish ambition, dissensions, factions, and envy; drunkenness, orgies, and the like. I warn you, as I did before, that those who live like this will not inherit the*

kingdom of God.

The word *witchcraft* here is also translated “sorcery” and refers to the use of drugs. The Apostle Paul calls witchcraft associated with drug use a sin. The non-medical use of drugs is considered one of the acts of a sinful nature. Using drugs, whether to “get a high” or to tap into the occult, is one of the acts of a sinful nature where users demonstrate their depraved and carnal nature. The psychic effects of drugs should not be discounted. A questionnaire designed by Charles Tate and sent to users of marijuana documented some disturbing findings.In his article in *Psychology Today* he noted that one-fourth of the marijuana users who responded to his questionnaire reported that they were taken over and controlled by an evil person or power during their drug-induced experience. And over half of those questioned said they have experienced religious or “spiritual” sensations in which they met spiritual beings.

Many proponents of the drug culture have linked drug use to spiritual values. During the 1960s, Timothy Leary and Alan Watts referred to the “religious” and “mystical”experience gained through the use of LSD (along with other drugs) as a prime reason for taking drugs.

How Parents Can Keep Their Children Off Drugs

Drugs pose a threat to our children, but parents can protect them from much of this threat by working on the following preventive measures.

An important first step in keeping children off drugs is to build up their self-esteem. Children with a positive self-image stand a better chance against peer pressure. Parents must help their children know they are a special creation of God (Ps. 139: 13-16) and worthy of dignity and respect (Ps.

8).

Parents must help them see the dangers of trying to conform to some group's standards by going along with its drug habits. Kids often think drugs are chic and cool. Parents must show their children that drugs are dangerous and work to counter the clichés of kids who will tempt their children to use drugs.

Second, parents should monitor their children's friendships. Before they allow their children to spend too much time with another child, parents should get to know the other child's family. Does the child come home to an empty house after school? Is there adult supervision of the children's activities? An unsupervised home often invites drug experimentation.

A third thing parents can do is to promote alternatives to drugs. Schools and church groups should develop "Just Say No" clubs and programs. Parents should provide alternative activities for their children. Sports, school clubs, the arts, and hobbies are all positive alternatives to the negative influence of drugs. At home, children should be encouraged to read books, play on a computer, or be involved in other activities that use the mind.

Fourth, parents should teach their children about drugs. Drug education cannot be left to the schools. Parents have to be personally involved and let their kids know that drugs will not be tolerated. Parents themselves should be educated about drugs and drug paraphernalia.

Fifth, parents must set a good example. Parents who are drug-free have a much better chance of rearing drug-free children. If parents are using drugs, they should stop immediately. The unconditional message to our kids must be that drugs are wrong and they will not be tolerated at home.

How Parents Can Recognize Drug Abuse

Most parents simply do not believe that their child could abuse drugs. But statistics suggest otherwise. Each year, thousands of young people get hooked on drugs and alcohol. Parents must learn to recognize the symptoms of drug abuse.

The organization Straight, Inc., has produced the following checklist of eighteen warning signs of alcohol or drug abuse:

1. School tardiness, truancy, declining grades
2. Less motivation, energy, self-discipline
3. Loss of interest in activities
4. Forgetfulness, short- or long-term
5. Short attention span, trouble concentrating
6. Aggressive anger, hostility, irritability
7. Sullen, uncaring attitudes and behavior
8. Family arguments, strife with family members
9. Disappearance of money, valuables
10. Changes in friends, evasiveness about new ones
11. Unhealthy appearance, bloodshot eyes
12. Changes in personal dress or grooming
13. Trouble with the law in or out of school
14. Unusually large appetite
15. Use of Visine, room deodorizers, incense
16. Rock group or drug-related graphics, slogans
17. Pipes, small boxes or containers, baggies, rolling papers or other unusual items
18. Peculiar odors or butts, seeds, leaves in ashtrays or clothing pockets.

What Parents Should Do If Their Children Are on Drugs

All the preventive measures in the world cannot assure that our children will not experiment with drugs. If parents suspect that their child is already using drugs, the following

practical suggestions should be followed.

First, don’t deny your suspicions. Drug addiction takes time but occurs much faster with a child than an adult. Some of the newer drugs (especially crack) can quickly lead to addiction. Parents should act on their suspicions. Denial may waste precious time. A child’s life may be in danger.

Second, learn to recognize the symptoms of drug abuse. The warning signs listed above are important clues to a child’s involvement with drugs. Some readily noticeable physical symptoms include a pale face, imprecise eye movements, and neglect of personal appearance. Some less noticeable symptoms involving social interaction include diminished drive or reduced ambition, a significant drop in the quality of schoolwork, reduced attention span, impaired communication skills, and less care for the feelings of others.

Third, be consistent. Develop clear rules in the areas of curfew, accountability for an allowance, and where your teen spends his or her time. Then stick with these rules. Consistent guidelines will allow for less opportunity to stumble into sin of any kind. Fourth, open up lines of communication with your child. Ask probing questions and become informed about the dangers of drugs and the potential risk to your child.

Finally, be tough. Fighting drugs takes patience and persistence. Don’t be discouraged if you don’t make headway right away. Your unconditional love is a potent weapon against drugs.

What the Church Can Do about Drug Abuse

The family must be the first line of defense for drugs, but an important second line should be the church. The church staff and individual members can provide much-needed answers and help to those addicted to alcohol and other drugs.

Practical Suggestions for the Church Staff

First, the pastor and staff must be educated about drug abuse. Substance abuse is a medical problem, a psychological problem, and a spiritual problem. The church staff should be aware of how these various aspects of the problem interrelate.

The pastor should also know the causes, effects, and treatments. He must be aware of the responses of both dependents and co- dependents. Sometimes the abuser’s family prevents recovery by continuing to deny the problem.

The church staff can obtain good drug information through the local library and various local agencies.Fortunately more Christians are writing good material on this issue, so check your local Christian bookstore.

Second, the congregation must be educated. The church should know the facts about substance abuse. This is a worthy topic for sermons and Sunday-school lessons.Ignorance puts young people in particular and the congregation in general at risk. Christians must be armed with the facts to combat this scourge in our nation.

Third, a program of prevention must be put in place. The best way to fight drug abuse is to stop it before it starts. A program that presents the problem of substance abuse and shows the results is vital.It should also provide a biblical framework for dealing with the problem of drugs in society and in the church.

Fourth, the church might consider establishing a support group. The success of non-church-related groups like Alcoholics Anonymous points to the need for substance abusers to be in an environment that encourages acceptance and accountability.

Biblical Principles for Counseling Drug Abusers

In establishing a church program or providing counsel for a substance abuser, we should be aware of a number of biblical principles Christians should apply.

First, Christians should help abusers see the source of their problem. It is not the drink or the drug that is ultimately the problem. Jesus said in Mark 7:19-20 that “whatever goes into the man from outside cannot defile him, because it does not go into his heart.”Instead, “That which proceeds out of the man, that is what defiles the man.” Evil lies in the human heart, not in the bottle or drug.

Second, Christians must be willing to bear one another’s burdens and provide comfort and counseling. Paul says in Galatians 6:1, “Brethren, even if a man is caught in any trespass, you who are spiritual, restore such a one in a spirit of gentleness; looking to yourselves, lest you too be tempted.”

Third, Christians must have an appreciation for the compulsive, irrational, and even violent nature of substance abuse. The Apostle Paul in his epistle to the Romans noted this tendency in our nature: “For that which I am doing, I do not understand; for I am not practicing what I would like to do, but I am doing the very thing I hate” (7:15).

How Society Can Fight the Drug Problem

In addition to what the family and the church can do, society must fight America’s drug epidemic on five major fronts. Each one has to be successful in order to win the overall battle.

The first battlefront is at the border. Federal agents must patrol the 8,426 miles of deeply indented Florida coastline and 2,067-mile border with Mexico. This is a formidable task,

but vast distances are not the only problem.

The smugglers have almost unlimited funds and some of the best equipment available. Fortunately, the federal interdiction forces (namely customs, the DEA, and the INS) are improving their capability.Customs forces have been given an increase in officers, and all are getting more sophisticated equipment.

The second battlefront is law enforcement at home. Police must crack down with more arrests, more convictions, longer sentences, and more seizures of drug dealers' assets. Unfortunately, law enforcement successes pale when compared with the volume of drug traffic. Even the most effective crackdowns seem to do little more than move drugs from one location to another.

Drug enforcement officers rightly feel both outgunned and underfunded. In the 1980s, the budget for the city of Miami's vice squad unit for an entire year was less than the cost of just one episode of the TV show *Miami Vice*.

An effective weapon on this battlefront is a 1984 law that makes it easier to seize the assets of drug dealers before conviction. In some cities, police have even confiscated the cars of suburbanites who drive into the city to buy crack.

But attempts to deter drug dealing have been limited by flaws in the criminal justice system. A lack of jail cells prevents significant prosecution of drug dealers. And even if this problem were alleviated, the shortage of judges would still result in the quick release of drug pushers.

A third battlefront is drug testing. Many government and business organizations are implementing testing on a routine basis in order to reduce the demand for drugs.

The theory is simple. Drug testing is a greater deterrent to drug use than the remote possibility of going to jail. People who know they will have to pass a urine test in order to get a

job are going to be much less likely to dabble in drugs. In 1980, 27 percent of some 20,000 military personnel admitted to using drugs in the previous 30 days. Five years later, after drug testing was implemented, the proportion dropped to 9 percent.

A fourth battleground is drug treatment. Those who are addicted to drugs need help. But the major question is who should provide the treatment and who should foot the bill. Private hospital programs are now a $4 billion-a-year business with a daily cost of as much as $500 per bed per day. This is clearly out of the reach of addicts who do not have employers or insurance companies who can pick up the costs.

A fifth battleground is education. Teaching children the dangers of drugs can be an important step in helping them to learn to say no to drugs. The National Institute on Drug Abuse estimates that 72 percent of the nation's elementary- and secondary-school children are being given some kind of drug education.

The battle for drugs will continue as long as there is a demand. Families, churches, and the society at large must work to fight the scourge of drugs in our country.

Crime in America

Case #1: Polly Klaas of Petaluma, California, was abducted from her suburban home during a sleepover with two friends on October 1, 1993, and subsequently murdered. Her alleged assailant, Richard Allen Davis, had been sentenced to sixteen

years in prison for kidnapping, but was released in June after serving only eight years of that sentence.

Case #2: Michael Jordan's father, James Jordan, was fatally shot in the chest on Interstate 95 in North Carolina on July 23, 1993. Charged with the murder were Larry Martin Demery and Daniel Andre Green. Demery had been charged in three previous cases involving theft, robbery, and forgery. He was awaiting trial for bashing a convenience-store clerk in the head with a cinder block during a robbery. Green had been paroled after serving two years of a six- year sentence for attempting to kill a man by smashing him in the head with an axe, leaving his victim in a coma for three months.

Americans are scared, and they are angry. The scary orgy of violent crime has made average citizens afraid to walk the streets in front of their homes. And this fear has fueled a public cry to end the killing fields in America. Americans have had enough, and they want to know why known criminals were let back out on the streets so they could kill Polly Klaas and James Jordan.

In America, the crime clock continues to click: one murder every 22 minutes, one rape every 5 minutes, one robbery every 49 seconds, and one burglary every 10 seconds. And the cost of crime continues to mount: $78 billion for the criminal justice system, $64 billion for private protection, $202 billion in loss of life and work, $120 billion in crimes against business, $60 billion in stolen goods and fraud, $40 billion from drug abuse, and $110 billion from drunk driving. When you add up all the costs, crime costs Americans a stunning $675 billion each year.

In addition to the financial cost is the psychological cost of devastated lives and a loss of security. In recent months, even apathetic Americans have been shaken from their false sense of security as they have seen criminals invade nearly every sanctuary where they felt they were safe: their cars

(James Jordan); their public transit (the Long Island Rail Road murders by Colin Ferguson); and even their bedrooms (the abduction of Polly Klaas).

Past solutions seem ineffective. Massive spending on social programs, massive spending on prisons, and sweeping changes in sentences seem to have little effect. No wonder there is such anger and a clamor for change.

Current Trends in Crime

1.The Crime Rate Is Increasing.

The recent string of heinous crimes does not represent a sudden wave of crime in America. Violent crime actually has been steadily increasing since the 1960s (though violent crime rates did dip for a time during the early 1980s). But in addition to the steady increase of crime has been the changing nature of these crimes. For example, there has been a pronounced increase in the prevalence of stranger-on-stranger robberies and drive-by shootings.

2. Teenagers Are Responsible for a Disproportionate Share of Violent Crime.

The violent-crime rate seems to rise and fall in tandem with the number of teens in the population. But recently, teen violence has exploded (murder arrests of teens jumped 92 percent since 1985) during a period in which the teen population remained steady or declined.

3.The Median Age of Criminals Is Dropping.

The perception that criminals are getting younger is backed up by statistics. In 1982, 390 teens ages 13-15 were arrested for murder. A decade later, this total jumped to 740.

4. A Majority of the Crimes Are Committed by

Habitual Criminals.

Criminologist Marvin Wolfgang compiled arrest records for males born and raised in Philadelphia (in 1945 and in 1958). He found that just 7 percent in each age group committed two-thirds of all violent crime. This included three-fourths of the rapes and robberies, and nearly all of the murders. They also found that this 7 percent had five or more arrests before the age of 18.

5. Crime Does Pay: Most Criminals Are Not Caught or Convicted.

Consider these statistics compiled by professor Morgan Reynolds (Texas A&M University) concerning burglary:

- *500,000 burglaries take place each month*
- *250,000 of these are reported to the police*
- *35,000 arrests are made*
- *30,450 prosecutions take place*
- *24,060 are convicted*
- *6,010 are sent to prison; the rest paroled*

Of the 500,0000 burglaries, only 6,000 burglars went to jail! And if this 1 percent effectiveness ratio isn’t disturbing enough, professor Reynolds found that the average time served was only 13 months.

How to Fight Crime

1. Put More Police on the Street.

The statistics from professor Reynolds illustrate the problem for burglary. Similar statistics exist for other major crimes including murder. Today 3.3 violent crimes are committed for every police officer. Twenty-five years ago, the ratio was exactly opposite. It is not surprising that we have an epidemic of crime in this country when the chances of being caught, prosecuted and convicted are so low. The average criminal has no reason to fear law enforcement. The obvious solution is to increase the deterrent through more police and swift and sure punishments.

2. Put More Criminals in Prison.

The premise is simple: a criminal in prison cannot shoot your family. While the idea of incarceration is not new, some of the recent findings are. A 1992 publication by the Justice Department entitled, “The Case for More Incarceration” showed the following:

- *That incarceration is cheaper than letting a criminal out on the streets.*

- *That although the crime rate is high, the rate of increase has been going down since we started putting more people in prison.*

- *That blacks and whites are treated equally and that the vast majority of law-abiding African-Americans would gain most from more incarceration of criminals because African-Americans are more likely to be victims of violent crime.*

Putting criminals behind bars keeps them off the streets and is less expensive to society than letting them back out on the street.

3. Focus on Habitual Criminals.

The same publication by the Justice Department also found that much violent crime is committed by people who have already been in the criminal justice system. This included those who have been arrested, convicted, or imprisoned, or who are on probation or parole. The chronic offender has had 5 or more arrests by the age of 18 and has gotten away with dozens of other crimes.

Police departments that target “serious habitual offenders” and put them behind bars have found the number of violent crimes as well as property crimes drops significantly. Arresting, prosecuting, convicting, and incarcerating this small percentage of criminals will make communities safer.

4. Keep Violent Criminals in Prison Longer.

Most citizens are shocked to find out that violent criminals serve only 5.5 years for murder or 3 years for rape. But those are the sobering statistics wrought from lenient early-release practices.

Government statistics (for 36 states and the District of Columbia) show that although violent offenders received an average sentence of seven years and eleven months imprisonment, they actually served an average of only two years and eleven months in prison—or only 37 percent of their imposed sentences. The statistics also show that, typically, 51 percent of violent criminals were discharged from prison in two years or less, and 76 percent were back on the streets in four years or less.

We need to revise our current parole and probation procedures. Criminals who knowhow to work the system can be set free on

bond, on their own recognizance, for re-habilitation, or for supervision. Three out of four people serving a criminal sentence are currently on probation or parole. In other words, they are out on the streets ready to commit another crime!

Many states are enacting “truth in sentencing” laws that require violent criminals to serve at least 85 percent of their prison sentence before becoming eligible for parole or other early release possibilities. Other states and the federal government are considering “three strikes and you’re out.” These laws mandate that those convicted of three violent crimes be put in jail for life.

Incarceration incapacitates violent criminals and keeps them off the streets, but it also deters would-be criminals. Criminologists have shown that an increase in arrest rates reduces the crime rate, and they have also demonstrated that an increase in sentence length also decreases crime rates. Catching more criminals, convicting more criminals, and keeping more criminals behind bars will reduce the crime rate.

5. Focus National and State Resources on Criminals, Not Weapons.

Many politicians seem to think that crime can be fought through gun control rather than criminal control.

No matter where you come down on the issue of gun control, consider the following statistics. Only 1 percent of all guns purchased in America are ever used in the commmission of a crime. And of those 1 percent, 5 out of 6 were obtained illegally. At its best, any gun control bill is only going to affect a very small portion of the criminal element.

6. Provide Alternative Sentencing for Non-Violent Offenders.

Criminals who are not a physical threat to society should not be locked up with violent criminals but should be sentenced to

projects that will pay back the community. Criminals should pay restitution to their victims and the community. Locking up violent criminals makes sense; locking up non-violent criminals does not. Currently it costs more to warehouse a criminal for one year than it does to send the brightest student to Harvard University. Alternative sentencing for non-violent offenders will reduce taxpayer cost and generate funds which can provide restitution for the crime committed.

7. Develop Community Programs Which Deter Crime.

Many cities have introduced curfews prohibiting minors from being on the streets from 10 P.M. to 6 A.M. Exceptions are made for those passing through town or on their way to or from a political or religious event.

Some neighborhoods have found erecting roadblocks effective in reducing crime. Drug dealing drops dramatically when police check for driver's licenses and when local citizens write down license plate numbers and film activities with hand-held videos. Setting up a neighborhood crime watch program has also been a major deterrent to crime in many neighborhoods.

Citizens and legislators need to take back the streets. If we implement these common sense measures in the legislature and in our communities, we can make our streets safe again.

Wealth and Poverty – A Biblical Perspective

Questions surrounding the biblical perspective on wealth and poverty are important to Christians for two reasons. First, a biblical view of wealth is necessary if we are to live godly lives, avoiding asceticism on the one extreme and materialism on the other. Second, a biblical view of poverty is essential if we are to fulfill our responsibilities to the poor.

A Biblical View of Wealth

Our materialistic culture is seducing Christians into an economic lifestyle that does not glorify God. The popularity

of television programs such as “Lifestyles of the Rich and Famous” and the veneration of social groups such as the glamorous “yuppies” testify to our society’s materialistic values, values that many Christians have adopted.

Even within the Christian community, believers are bombarded with unbiblical views of wealth. At one extreme are those who preach a prosperity gospel of “health and wealth” for all believers. At the other extreme are radical Christians who condemn all wealth and imply that *rich Christian* is a contradiction in terms.

What, then, is the truly biblical view of wealth? At first glance, the Bible seems to teach that wealth is wrong for Christians. It appears even to condemn the wealthy. After all, both Jesus and the Old Testament prophets preached against materialism and seemed to say at times that true believers cannot possess wealth. If this is so, then all of us in Western society are in trouble, because we are all wealthy by New Testament standards.

But a comprehensive look at the relevant biblical passages quickly reveals that a biblical view of wealth is more complex. In fact, Scripture teaches three basic principles about wealth.

First, wealth itself is not condemned. For example, we read in Genesis 13:2 that Abraham had great wealth. In Job 42:10 we see that God once again blessed Job with material possessions. In Deuteronomy, Proverbs, and Ecclesiastes, wealth is seen as evidence of God’s blessing (Deut. 8; 28; Prov. 22:2; Eccles. 5:19).

But even though wealth might be an evidence of God’s blessing, believers are not to trust in it. Proverbs, Jeremiah, 1 Timothy, and James all teach that the believer should not trust in wealth but in God (Prov. 11:4; 11:28; Jer. 9:23; 1 Tim. 6:17; James 1:11; 5:2).

Second, when wealthy people in the Bible were condemned, they were condemned for the means by which their riches were obtained, not for the riches themselves. The Old Testament prophet Amos railed against the injustice of obtaining wealth through oppression or fraud (4:11; 5:11). Micah spoke out against the unjust scales and light weights with which Israel defrauded the poor (6:1). Neither Amos nor Micah condemned wealth *per se*; they only denounced the unjust means by which it is sometimes achieved.

Third, Christians should be concerned about the effect wealth can have on our lives. We read in Proverbs 30:8-9 and Hosea 13:6 that wealth often tempts us to forget about God. Wealthy believers may no longer look to God for their provision because they can meet their basic needs. We read in Ecclesiastes 2 and 5 that people who are wealthy cannot really enjoy their wealth. Even billionaires often reflect on the fact that they cannot really enjoy the wealth that they have. Moreover, Proverbs 28:11 and Jeremiah 9:23 warn that wealth often leads to pride and arrogance.

So the Bible does not condemn those who are wealthy. But it does warn us that if God blesses us with wealth, we must keep our priorities straight and guard against the seductive effects of wealth.

A Biblical View of Poverty

The Bible classifies the causes of poverty into four different categories. The first cause of poverty is oppression and fraud. In the Old Testament (e.g., Prov. 14:31; 22:7; 28:15) we find that many people were poor because they were oppressed by individuals or governments. Many times, governments established unjust laws or debased the currency, measures that resulted in the exploitation of individuals.

The second cause of poverty is misfortune, persecution, or judgment. In the book of Job we learn that God allowed Satan

to test Job by bringing misfortune upon him (1:12-19). Elsewhere in the Old Testament (e.g., Ps. 109:16; Isa. 47:9; Lam. 5:3) we read of misfortune or of God's judgment on a disobedient people. When Israel turned from God's laws, God allowed foreign nations to take them into captivity as a judgment for their disobedience.

The third cause of poverty is laziness, neglect, or gluttony. Proverbs teaches that some people are poor because of improper habits and apathy (10:4; 13:4; 19:15; 20:13; 23:21).

The final cause of poverty is the culture of poverty. Proverbs 10:15 says, "The ruin of the poor is their poverty." Poverty breeds poverty, and the cycle is not easily broken. People who grow up in an impoverished culture usually lack the nutrition and the education that would enable them to be successful in the future.

Poverty and Government

While government should not have to shoulder the entire responsibility for caring for the poor, it must take seriously the statements in Leviticus and Proverbs about defending the poor and fighting oppression. Government must not shirk its God-given responsibility to defend the poor from injustice. If government will not do this, or if the oppression is coming from the government itself, then Christians must exercise their prophetic voice and speak out against governmental abuse and misuse of power.

Government must first establish laws and statutes that prohibit and punish injustice. These laws should have significant penalties and be rigorously enforced so that the poor are not exploited and defrauded. Second, government must provide a legal system that allows for the redress of grievances where plaintiffs can bring their case to court for settlement.

A second sphere for governmental action is in the area of misfortune. Many people slip into poverty through no fault of their own. In these cases, government must help to distribute funds. Unfortunately, the track record of government programs is not very impressive. Before the implementation of many of the Great Society programs, the percentage of people living below the poverty level was 13.6 percent. Twenty years later, the percentage was still 13.6 percent.

We need a welfare system that emphasizes work and initiative and does not foster dependency and laziness. One of the things integral to the Old Testament system and missing in our modern system of welfare is a means test. If people have true needs, we should help them. But when they are lazy and have poor work habits, we should admonish them to improve. Our current welfare system perpetuates poverty by failing to distinguish between those who have legitimate needs and those who need to be admonished in their sin.

Poverty and the Church

The church has the potential to offer some unique solutions to poverty. Yet ever since the depression of the 1930s and the rise of the Great Society programs in the 1960s, the church has tended to abdicate its responsibility toward the poor to the government.

A Cooperative Effort

In the Old Testament, there were two means to help the poor. The first was through the gleaning laws listed in Leviticus 19:9-10 and Deuteronomy 24:19-22. As farmers reaped their crops, they would leave the corners of their fields unharvested, and anything that fell to the ground was left for the poor.

The second method used to help the poor was the tithe. In Leviticus 27:30 we find that the tithe provided funds both for

the church and for the poor. The funds were distributed by the priests to those who were truly needy.

In the New Testament, the church also had a role in helping to meet the needs of the poor. In 1 Corinthians 16, Paul talks about a collection that was sent from the churches to the Jerusalem believers. We also find many scriptural admonitions calling for Christians to distribute their resources to others compassionately (2 Cor. 9:7; 1 Tim. 5:9-10; 6:18; James 1:27).

These verses concerning the gleaning laws and the tithe seem to indicate that both the government and the church should be involved in helping the poor. Ideally, the church should be in the vanguard of this endeavor. Unfortunately, the church has neglected its responsibility, and government is now heavily involved in poverty relief.

I believe poverty relief should be a cooperative effort between the government and the church. As I noted above, government can provide solutions to exploitation and oppression by passing and enforcing just laws. It can also provide solutions to economic misfortune through various spending programs. But it cannot solve the problems of poverty by addressing injustice and misfortune alone. Poverty is as much a psychological and spiritual problem as it is an economic problem, and it is in this realm that the church can be most effective. Although salvation is not the sole answer, the church is better equipped than the government to meet the psychological and spiritual needs of poverty-stricken people. Most secular social programs do not place much emphasis on these needs and thus miss an important element in the solution to poverty.

Breaking the Cycle of Poverty

As I stated earlier, one of the causes of poverty is the culture of poverty. People are poor because they are poor. An individual who grows up in a culture of poverty is destined

for a life of poverty unless something rather dramatic takes place. Poor nutrition, poor education, poor work habits, and poor family relationships can easily condemn an individual to perpetual poverty.

Here is where the church can provide some answers. First, in the area of capital investment, churches should develop a mercies fund to help those in need. Christians should reach out to those in poverty by distributing their own financial resources and by supporting ministries working in this area. Such an outreach provides churches with a mechanism to meet the physical needs of the poor as well as a context to meet their spiritual needs.

A second solution is for Christians to use their gifts and abilities to help those caught in the web of poverty. Doctors can provide health care. Educators can provide literacy and remedial reading programs. Businesspeople can impart job skills.

This kind of social involvement can also provide opportunities for evangelism. Social action and evangelism often work hand in hand. When we meet people's needs, we often open up opportunities to reach them for Jesus Christ.

This leads to a third solution. Christian involvement can lead to spiritual conversion. By bringing these people into a relationship with Jesus Christ, we can break the culture of poverty. Second Corinthians 5:17 says that we become new creatures in Jesus Christ. Being born again can improve attitudes and family relationships. It can give new direction and the ability to overcome handicaps and hardships.

A fourth area of Christian involvement is to call people to their biblical task. Proverbs 6:6 says, "Go to the ant, you sluggard, observe her ways and be wise"; we see here that we are to admonish laziness and poor habits that lead to poverty. In the New

Testament, Paul reminds the Thessalonians of their church rule: “If a man will not work, he shall not eat” (2 Thess. 3:10). Christians should gently but firmly admonish those whose poverty is the result of poor work habits to begin taking responsibility for their own lives.

The church can help those addicted to alcohol or other drugs to overcome their dependencies. Christians can work to heal broken families. Dealing with these root causes will help solve the poverty problem.

The Christian Lifestyle

What, then, does this biblical view of wealth and poverty have to say about the way Christians should live? A brief survey of Scripture shows godly people living in a variety of different economic situations. For example, Daniel served as secretary of state in pagan administrations and no doubt lived an upper-middle- class lifestyle. Ezekiel lived outside the city in what might have been considered a middle-class lifestyle. And Jeremiah certainly lived a lower-class lifestyle.

Which prophet best honored God with his lifestyle? The question is of course ridiculous. Each man honored God and followed God’s leading in his life. Yet each lived a very different lifestyle.

Christians must reject the tacit assumption implicit in many discussions about economic lifestyle. There is no ideal lifestyle for Christians. One size does not fit all. Instead, we must seek the Lord to discern His will and calling in our lives.

As we do this, there are some biblical principles that will guide us. First, we should acknowledge that God is the Creator of all that we own and use. Whether we are rich or poor, we must acknowledge God’s provision in our lives. We are stewards of the creation; the earth is ultimately the Lord’s (Ps.

24:1).

Second, we should “seek first His kingdom and His righteousness” (Matt. 6:33). We must recognize and avoid the dangers of wealth. Greed is not an exclusive attribute of the rich, nor is covetousness an exclusive attribute of the poor. Christians must guard against the effect of wealth on their spiritual lives. There is nothing wrong with owning possessions. The problem comes when the possessions own us.

Third, Christians must recognize the freedom that comes with simplicity. A simple lifestyle can free us from the dangers of being owned by material possessions. It can also free us for a deeper spiritual life. While simplicity is not an end in itself, it can be a means to a spiritual life of service.

Here are a few suggestions on how to begin living a simple lifestyle. First, eat sensibly and eat less. This includes not only good nutrition, but occasional times for prayer and fasting. Use the time saved for prayer and meditation on God’s word. Use the money saved for world hunger relief.

Second, dress modestly. This not only obeys the biblical injunction of dressing modestly, but avoids the Madison Avenue temptation of having to purchase new wardrobes as styles change. A moderate and modest wardrobe can endure the drastic swings in fashion.

Third, give all the resources you can. This includes both finances and abilities. Wesley’s admonition to earn all you can, save all you can, and give all you can is appropriate here.

Look for opportunities to give the resources God has blessed you with. If God has blessed you with wealth, look for opportunities to give it away prudently. If God has blessed you with great abilities, use them for His glory.

Terrorism

Terrorism has become the scourge of democratic governments. Experts in the field estimate that less than 1 percent of terrorist attacks occured in the Soviet Union, but according to Rand Corporation expert Brian Jenkins, nearly a third of all terrorists attacks involve Americans.

Democratic governments, accustomed to dealing within a legal structure, often find it difficult to deal with criminals and terrorists who routinely operate outside of the law. Yet deterrence is just as much a part of justice as proper enforcement of the laws.

Democratic governments which do not deter criminals inevitably spawn vigilantism as normally law-abiding citizens, who have lost confidence in the criminal justice system, take the law into their own hands. A similar backlash is beginning to emerge as a result of the inability of Western democracies to defend themselves against terrorists.

But lack of governmental resolve is only part of the problem. Terrorists thrive on media exposure, and news organizations around the world have been all too willing to give terrorists what they crave: publicity. If the news media gave terrorists the minuscule coverage their numbers and influence demanded, terrorism would decline. But when hijackings and bombings are given prominent media attention, governments start feeling pressure from their citizens to resolve the crisis and eventually capitulate to terrorists' demands. Encouraged by their latest success, terrorists usually try again. Appeasement, Churchill wisely noted, always whets the appetite, and recent successes have made terrorists hungry for more attacks.

Some news commentators have been unwilling to call terrorism what it is: wanton, criminal violence. They blunt the barbarism by arguing that “one man’s terrorist is another man’s freedom fighter.” But this simply is not true. Terrorists are not concerned about human rights and human dignity. In fact, they end up destroying human rights in their alleged fight for human rights.

Terrorism has been called the “new warfare.” But terrorists turn the notion of war on its head. Innocent non-combatants become the target of terrorist attacks. Terrorist warfare holds innocent people hostage and makes soldier and civilian alike potential targets for their aggression.

Terrorism will continue even though war has never been formally been declared and our enemy is not a single identifiable country. Instead we are being victimized by an international terror network bent on crippling American morale.

Government and War

First, we must define a terrorist. Is a terrorist a common criminal? If terrorists are only common criminals, then biblically speaking, they should merely be dealt with by their host governments.

In Romans 13, the Apostle Paul says, “he who resists authority has opposed the ordinance of God; and they who have opposed will receive condemnation upon themselves. For rulers are not a cause of fear for good behavior, but for evil. Do you want to have no fear of authority? Do what is good and you will have praise from the same; for it is a minister of God to you for good. But if you do what is evil, be afraid; for it does not bear the sword for nothing; for it is a minister of God, an avenger who brings wrath upon the one who practices evil.”

This passage of Scripture helps us make an important

distinction we will use in our analysis of terrorism. The Apostle Paul's teachings on government shows that criminals are those who do evil and threaten the civil peace. Any outside threat to the existence of the state is not a criminal threat but an act of war which is also to be dealt with by the government.

In other words, criminals threaten the state from within. Foreign armies threaten the state from outside. In the case of seeking domestic peace, the Apostle Paul outlines how governments will approve of good works, but that governments should bring fear to those who are wrongdoers.

Evildoers should live in fear of government. But in the case at hand, terrorists do no live in fear of the governing authorities in the countries where they live. Their governments do not think of them as breaking civilian laws and thus do not prosecute them.

This is foreign to the American mindset. If an anti-Syrian terrorist group were based in the United States, we would prosecute those terrorists as enemies of the state. A U.S. based anti-Syrian terrorist group would be illegal in the United States. And they would be illegal since they're carrying out activities reserved for Congress and the President. Only governments have a foreign policy and war-making strategies. But Middle Eastern governments do not prosecute terrorists the way we would. Why? Because terrorists often carry out policies and desires of such host governments.

Middle Eastern terrorists, far from fearing the sword of the governing authorities, instead are often given sanctuary by such governments. Governments who give sanctuary and even give approval have often adopted the attitude that terrorists do them no harm so why should they move against the terrorist organizations? In fact, they are not seen as a threat because terrorist groups are acting out the host government's policies.

In conclusion, both the terrorist groups and their host nations are truly enemies of the American government when they capture and kill U.S. civilians for military and foreign policy purposes. This is not civilian murder, but military warfare.

Military Action

Based upon the Apostle Paul's teaching of government in Romans 13, terrorists should be classified as common criminals in their host countries. But they are not prosecuted by host countries and are often carrying out the military policy and foreign policy of that country.

Thus, when terrorists attack, we should not view them as criminals but as foreign soldiers who attempt to threaten the very existence of the American government. Whether or not the terrorists have the firepower and strategic wisdom to actually undermine the U.S. government is not the issue. At issue is how to deal with a new type of military aggressor.

Terrorists are not common criminals to be tried in American civil courts. They are military targets who must be stopped since they are armed and military enemies of the American government who are on attack. Yes, America has other armed enemies, but they are not on the attack as terrorists are.

In the same way that it took traditional armies some time to learn how to combat guerilla warfare, so it is taking Western governments time to realize that the rules for warfare have also been revised in the case of terrorism. Diplomatic efforts have failed to convince Middle East governments to help the United States in bringing terrorist groups to justice. Meetings and negotiations haven't been able to strike fear in terrorist's hearts.

When we fight terrorism we need to realize we are talking about war. Military warfare is different from civilian

peacekeeping. In civilian peacekeeping, people are presumed innocent until proven guilty. A citizen can be arrested and detained before trial, but must be released unless guilt is proven.

Military warfare is different. A trial is not held for each military action. In a sense, in a just war, a "trial" of sorts is held before any action is taken. Discussion and debates among congressmen and senators usually occur before war is declared. Factfinding studies, presentations, testimonies, and other kinds of forethought go into a declaration of war. In a sense, when the use of the military is involved, the trial period comes before anyone is confronted or arrested. But once war is declared, there are no more trials until the enemy is defeated. And every one who aids and abets the enemy is guilty by association.

At present, terrorism is a one-sided war that the United States is losing. American soldiers and citizens are being killed in the war. Unfortunately, the United State is not treating terrorism like war. The limited war powers granted to the President by the Congress are not enough and aren't used in a systematic way to defeat the enemy.

If we are to win the war against terrorism, we must realize that it is war. Until we see it as military aggression, we will be unsuccessful in ending terrorism in this decade.

Constitutional Issues

Terrorist groups are not living in fear of their host governments. Instead, law-abiding citizens live in fear of terrorist groups. In one TV interview a Middle Eastern terrorist was quoted as saying, "We want the people of the United States to *feel the terror*."

The ability of these groups to carry out their agenda is not the issue. The fundamental issue is how U.S. government

leaders should deal with this new type of military strategy. Terrorists have held American diplomats hostage for years, blown up military compounds, and hijacked airplanes and cruise ships. Although some hostages have been released, many others have been killed and the U.S. has been unsuccessful at punishing more than a small number of terrorists.

Although international diplomacy has been the primary means used by the United States against terrorism, we should consider what other means may also be appropriate. In the past, American leaders have responded to military aggression in a variety of ways short of declaring war.

The U.S. Constitution grants the following powers to Congress: “To define and punish piracies and felonies committed on the high seas, and offenses against the law of nations; To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water.” Terrorist acts fall into at least two of the Congressional provisions for dealing with attacks on the nation. They are: (1) to punish offenses against the law of nations, and (2) to declare war.

In either case, there are strong Constitutional grounds for taking action against terrorists. The difficulty comes in clearly identifying the enemy and being willing to risk offending many Arab nations who we consider allies. Congress must identify the enemy and call that group a military target. Once that has happened many of the other steps fall into place with less difficulty.

At this point military strategy must be deployed which can hunt down small groups of well-armed and well-funded men who hide within the territory of a host country. We must also develop a political strategy that will allow us to work within a host country. We must make it clear how serious the United States takes a terrorist threat. American citizens are tired of being military targets in an undeclared war.

Through diplomatic channels we must make two things very clear to the host country. First, they should catch and punish the terrorist groups themselves as civilian criminals. Or, second, they should extradite the enemy soldiers and give them up to an international court for trial.

If the host country fails to act on these two requests, we should make it clear that we see them in complicity with the terrorist groups. But failing to exercise their civil responsibility, they leave themselves open to the consequences of allowing hostile military forces within their borders.

Just Punishment

Although diplomacy has its place, it is easy to see that diplomacy and negotiation do not strike fear in the hearts of terrorists. Yes, American hostages in Iran were eventually released after 444 days. But other American hostages like Lt. Col. Williams Higgins were killed by Lebanese Shiite terrorists. In most cases, diplomatic efforts have failed to bring terrorists to justice.

We have shown above that Romans 13 gives government the right to bear the sword to protect its citizens from criminal threats from within the country and military threats from outside the country. We have also shown that military action is also sanctioned “to punish piracies and felonies” and to punish “offenses against the law of nations.”

With this as background, we should now focus on the issue of just punishment which is described in Exodus 21. The principle here is that the punishment must be proportional to the crime. A judge could not chop off a man’s hand merely because he scratched another man’s hand in a fight. The punishment was to be: burn for burn, wound for wound, and stripe for stripe. Excessive punishments were forbidden. Punishment was swift and sure, but it was also fair and proportional.

Just and proportional punishments have been the model for both criminal and military punishments. Not that all nations have followed this rule. But the United States should establish the moral tone by following this biblical principle.

In the context of our discussion on terrorism, I believe that we should apply proportional punishment to terrorists and host countries. First, this means that we should not apply too severe a punishment. Calls for bombing cities of host countries in retaliation for terrorist actions should be rejected as inappropriate and unjust.

But this also means we should not apply too light a punishment. Host nations who harbor terrorists and refuse to punish or extradite terrorists should be pressured by the United States. Punishment could come in the form of economic embargoes, import- export restrictions, severing diplomatic relations, or even military actions. But the punishment should be proportional to the terrorist act. Excessive reaction or retaliation will not only be unjust, but it will fuel the fires of anti-American sentiment.

In some cases, an American strike force of counterterrorists might be necessary when the threat is both real and imminent. This should be the option of last resort, but in certain instances it may be necessary. In 1989, for example, Israeli special forces captured Sheik Obeid and no doubt crippled the terrorist network by bringing one of their leaders to justice. In 1985, U.S. planes were able to force an Egyptian airliner down to prevent the escape of another terrorist leader. These are admittedly acts which should be done rarely and carefully. But they may be appropriate means to bring about justice.

In conclusion, I believe we must recognize terrorism as a new type of military aggression which requires governmental action. We are involved in an undeclared war and Congress and the President must take the same sorts of actions they would if threatened by a hostile country. We must work to deter

further terrorist aggression in this decade.
