

# When Your Teen Rejects Your Values – A Christian Response

*Rick Rood looks at a typical teenage rebellion and offers a plan based on a biblical worldview and Christian values to help lead them through rebellion to a strong Christian walk. By reacting from a truly Christian perspective and following a biblical plan of action, our chances of successfully making it through to adulthood are greatly increased.*

## The Fact of Teenage Rebellion

Mark Twain once advised parents that when their child turns 13 they should put them in a barrel, close the lid, and feed them through a hole in the side. When they turn 16, Twain suggested parents close the hole! Twain was a humorist, and we laugh about his counsel. But beneath the laughter is the recognition that the teenage years are seldom easy...for the teen or their parents! And it's particularly challenging when we find that our teen is rejecting our values.

Admittedly, in tackling this issue we are taking on a real lion! If there is anything more humbling than being the parent of a rebelling teenager, it's attempting to pass on advice to others who are struggling with this same situation. But our prayer is that this pamphlet will offer some help and encouragement to parents of a challenging teen.

"Adolescence" is the label we attach to the time of life from the onset of puberty to maturity. It denotes the stage of life during which a young person moves from childhood to adulthood, from dependence upon parents to independence. It's a time of great change not only physically, but emotionally, mentally, spiritually and socially. It's a time when teens are asking questions like "Who am I?," "What do I believe?," "How do I fit into life in this world?"...when they're searching for their

identity as individuals.

Adolescence is also a time when some degree of strain develops between teens and their parents. No longer do parents appear to be infallible and beyond contradiction. Our flaws are much more visible...and probably exaggerated by our teen. It's a time when the values of their peers generally appear much more attractive than their parents', and when acceptance by their friends will likely become much more important than that of their parents.

It is not uncommon in their quest for identity and independence for teens to reject some of the values of their parents, their church, and society. And to a degree this is not unhealthy. Young people need to develop their own convictions about life. And part of the process may involve challenging the values and convictions they have been taught. Some may challenge them more overtly, and others more covertly. Some may challenge them in relatively minor areas such as dress, appearance, music, or the way they keep their room. Others may show total disregard for the moral and spiritual values of their family, their church, and even society. Parents who allow for no individuality in some of the more "minor" areas (such as dress and appearance), may be challenging their teen to test them in the areas that are of much greater consequence.

Several years back, a group that included Dr. James Dobson conducted a survey of some 35,000 parents. The survey concluded that while 25% of teens are of "average" temperament, 40% were considered to be more on the "compliant" side, and 35% on the "strong-willed" side. (More boys than girls fell in this latter category.) Among the strong-willed teens, 74% were found to be in some degree of rebellion during their teenage years, 26% of them to a severe degree. Furthermore, it was surprisingly found that the strong-willed were most susceptible to the influence of their peers! It was no surprise to find that 72% of parents of strong-willed

teens characterized their relationship as “difficult” or “very stressful”! (*Parenting Isn't for Cowards*, by Dr. James Dobson, chaps. 3 & 4).

If you identify with this group of parents, you are definitely not alone! And perhaps this realization is an important first step in responding to a teen who rejects our values!

## **The Sources of Teenage Rebellion**

Many a parent has wondered if the teen living in their home is really the same child that they played with and enjoyed just a few years before! And it is only natural for them to ask “Why?” “Why is this happening? And why is this happening to us?” Most parents are probably also asking themselves, “Where did we go wrong? What could we have done to prevent this from happening?” These questions are not only painful to ask, but are equally difficult to answer. And it's important not to jump to simplistic conclusions in trying to do so.

It is very likely that there is more than one reason why our teen is rejecting our values. And there really are many possible reasons. One that we noted yesterday is that it is simply the nature of adolescents to search for their own identity and independence. We also noted the role that innate temperament plays in teenage rebellion. A survey conducted by a group including Dr. James Dobson concluded that nearly 3/4 of children born with a strong-willed temperament exhibited some degree of rebellion during their teen years. There are, however, a number of other possible reasons why our teen is rejecting our values. It's important to look beyond their behavior to the reasons behind it.

First, it's possible that there are physiological factors involved. Young people who have learning disabilities, or attention deficit/hyperactive disorder are going to be much more inclined to rebel, in part over the frustration they are experiencing in meeting the expectations of their parents,

teachers and other authority figures. Any physical illness, or even imbalanced or insufficient diet can affect a teen's emotional and behavioral pattern. Even apart from such irregularities, the changes that are taking place in an adolescent's hormonal system are apt to result in more volatile emotions.

Second, it is possible that there are difficulties of a psychological nature, or even disorders of a more serious nature involved. In this latter category would fall young people who are manic-depressive or schizophrenic. It is important to realize that many of these disorders have genetic and biological sources, requiring the attention of a medical professional. It is more likely, however, that a teen may be struggling with low self-esteem or depression...and may be engaging in conduct that is aimed at obtaining the acceptance of his peers, or at gaining the attention of his parents or other authority figures (even if it's negative in nature!).

Third, it is not uncommon for a young person to express his anger (and even guilt) over the tensions that may exist within the family at large or between his parents by acting in a rebellious fashion.

Traumatic experiences such as a death in the family, prolonged illness, or serious financial problems can be a source of rebellion. They may even result in a teen's questioning the existence or the goodness of God, and in rejecting of God's moral principles.

We must not fail to mention the negative influence of peers, and of the values portrayed and endorsed in today's movies, television, and by the lyrics of much of the music that young people listen to. All of these media are communicating a message that more often than not challenges the right of anyone (including parents) to limit their freedom or stifle their individuality.

Finally, it is not impossible that our own example as parents, or our parenting style has contributed to their rebellion to a greater or lesser degree. We will return to this issue later in the week, and tomorrow we will begin to look at the question of whether parents are always at fault when their teens reject their values.

## **A Parent's Reaction to His Teen's Rebellion**

In the previous two programs we have briefly examined some basic facts about the nature of teenage rebellion and some of its possible sources. We noted that there are many possible reasons why a teen might choose to reject his parents' values. It is not uncommon, however, for those of us who are Christian parents to feel that we bear the greater (if not exclusive) share of responsibility. After all, have we not been taught that if we train our children "in the way they should go, when they are old they will not depart from it"? (Prov. 22:6). If they do depart from the way they should go, certainly it is our fault for not training them properly!

At the outset, we must affirm that parents are responsible before God to provide the training and instruction that will guide them in His way (Eph. 6:4b). The scriptures also warn us that it is possible for us to "provoke our children to anger" (Eph. 6:4a) and to "exasperate them so that they become discouraged" (Col. 3:21). When our teen is rebelling, it's appropriate for us to evaluate the impact that our own parenting style has had in our child's life.

We must just as emphatically, however, reject the notion that teenage rebellion is invariably the consequence of parental mismanagement. To believe that it is, is to accept the premise that all human behavior is caused by external influences. Behavior may be influenced (even very strongly) by genetic and environmental factors, but to say that there is no such thing

as human will and choice is to deny a fundamental element of biblical teaching. In the final analysis, a young person's rejection of godly values is a personal choice.

Many Christians, however, find themselves adopting an essentially behavioristic and deterministic philosophy in their acceptance of a common interpretation of the verse we alluded to a few moments ago, Proverbs 22:6, "Train up a child in the way he should go, and when he is old he will not depart from it." Many a parent has concluded from this proverb that if his teen does "depart from the way he should go," it is because he has failed to provide the training he needed. But that this proverb (as many proverbs) should be taken as general observation about life, rather than as an absolute divine promise, can be deduced from two facts. First, if we do take this proverb as an absolute promise, then other proverbs in the book must be also. Yet there are a number of proverbs for which exceptions can be found on a regular basis. For example, Proverbs 10:27 says that "The fear of the Lord prolongs life, but the years of the wicked will be shortened." This is a general truth. But there are innumerable examples of the wicked who have lived long on the earth, and of the godly whose lives have been cut short. A second reason is that to take it as an absolute promise would contradict the teaching of many other proverbs that it is possible for a young person to reject the training his parents provide. Proverbs 15:5 says, "A fool rejects his father's discipline." The writer of Proverbs also appeals to sons to "receive" and "be attentive" to their parents' instruction (2:1-2), and warns against "neglecting" and "abandoning" their teaching (4:1-2). (Cf. also Deut. 21:18-21)

We must conclude, then, that when our teen rejects our values, we must prayerfully discern to what degree both we and they are responsible for what is happening, as well as what other influences are at work. In some cases, the parents may bear a great deal of responsibility; in others they may bear very

little. The important thing, however, is not so much “who is to blame,” but what ought we to do from this point on in our relationship with our teen.

## **A Plan for Parents**

We have looked at the nature of teenage rebellion. We’ve also addressed the question of whether it is always the parents’ fault when their teen rejects their values. But today, we want to focus on how we should respond as parents of a challenging teen.

Our first response must be to look beyond the rebellious behavior to the sources that lie behind it. If we suspect there are factors of a physiological nature, we must not neglect to enlist the help of a qualified physician. Nor should we reject the aid of a godly counselor in addressing issues of depression or self image that may lie hidden in our teen’s heart. But neither should we neglect to look to the Scriptures as our ultimate source of wisdom.

As we do, it will be tempting to look initially for ways in which we can promote change in our teenager’s behavior. But the one factor in our child’s life over which we have the most influence is our own character and approach to parenting. And this is where we must begin—by reflecting on the model which God himself provides in his character and in his relationship with us as his children. In God as our Father we find that perfect balance of judgment and grace, of discipline and love, compassion and firmness. This is a standard from which all of us fall short, the one to which we will never fully attain in this life; but the one by which we must measure our lives, and toward which we must continually strive! Larry Crabb has said, “The key to becoming a more effective parent is to become an increasingly godly person.” (*Parenting Adolescents* by Kevin Huggins, p. 258) Wise is the parent who makes this his primary goal!

Wise too is the parent who resists the impulse to project a perfect image to his teen, but who echoes the prayer of David: "Search me, O God, and know my heart...see if there be any hurtful way in me; and guide me in the everlasting way" (Ps. 139:23-24). Wise is the parent who is willing to offer a sincere apology to his child, and to seek forgiveness for ways he has genuinely fallen short as a parent. But wise also is the parent who refuses to brood over past failures, but who having learned from his mistakes sets out in a new direction! (Phil. 3:13-14). And wise is the parent, as well, who guards against trying to "atone" for past mistakes by becoming overly kind or permissive.

As we seek to allow God to shape our lives after his own model as the divine parent, we will do well to keep two primary qualities in view. The first is an unconditional love for our child. This is the kind of love God manifests toward us. "But God demonstrates his own love for us in that while we were yet sinners (while we were his enemies!), Christ died for us" (Rom. 5:8). This is the kind of love He seeks to instill in us for our teenager, regardless of how much anger or contempt he or she has shown toward us—a love that asks not how they can meet our needs, but how God can use us to minister to their genuine needs.

But the second quality is an uncompromising commitment to help our teenager grow toward responsible maturity. "For those whom the Lord loves He disciplines;...but He disciplines us for our good, that we may share His holiness" (Heb. 12:6,10). As God guides us in the path of righteousness, and establishes clear expectations for our lives, so must we for our teen. As God disciplines for rebellion through appropriate consequences, so also must we.

Above, we proposed that there are two primary qualities God seeks to instill in those of us who are parents of a teen who is rejecting our values: an unconditional love and an uncompromising commitment to guide them toward responsible

maturity. But how do these qualities take shape in our day to day lives?

How do we show this kind of love toward our teenager? First, we love them when we praise and reward them for the good that we do see in their lives, as God does with us. We love them when we show respect for their feelings and opinions, though not always agreeing with them. We love them when we show interest in and participate with them in activities that are meaningful to them, and refrain from squeezing them into a mold for they were not designed. We love them when we restrain our anger from erupting in violent acts and hurtful words, when we relate as a "fellow struggler," when we don't try to be better than they are at everything, when we handle our own sin in the same way we expect them to, when we listen to their explanations before disciplining them, when we keep alive a sense of hope and excitement about discovering God's purpose for their life!

But the love toward which we strive is also one that guides and disciplines (Prov.13:24). states that "he who loves (his son) disciplines him diligently." Researchers have found that teens are less likely to rebel who grow up in homes that are neither too permissive nor overly authoritarian, where parents gradually allow them more participation in decisions and relinquish more responsibility, while maintaining final authority (*Teen Shaping*, by Len Kageler, chaps. 3 & 12).

What are a few marks of a parent who has this kind of commitment? First, he provides instruction in the ways of the Lord. One teenager who refused to accompany his family to church, was willing to read a chapter of scripture with his father several times a week. By his senior year, they had read through the entire New Testament together! Second, he communicates clear expectations regarding personal conduct (even if parents of his child's friends do not): expectations concerning the use of language in the home, honesty about whereabouts and activities, household chores, attendance at

school, curfew, use of the car, payment for gas, insurance and traffic tickets, drinking, and sexual conduct. Finally, such a parent will enforce meaningful consequences for wilful rebellion. There are some things we are obliged to provide for our child no matter what: a place to live (though it need not be our own home in all situations), food, clothing, and personal respect. But many things that young people take for granted today are privileges that can and must be suspended as a result of irresponsible behavior: use of the phone or TV, tuition for school, use of our car, or even a driver's license. Teenagers who engage in activities that are not only irresponsible but illegal, should have every expectation that their parents will notify the authorities. We do our children no favor when we shield them from the painful consequences of foolish choices. Some teens will become skilled at manipulating their parents through guilt or intimidation. But we must resolve to render such tactics ineffective by refusing to let them work.

God does not hold us responsible for all of our teenager's actions. But He does hold us accountable for the way in which we relate to them as parents—with unconditional love, but uncompromising commitment to responsible maturity.

Yet, even when we do, God provides no guarantee that they will always (or even ever) respond positively. But He does ask that we persist in doing what is right . . . praying for them, gradually relinquishing them to Him who knows them far better than we . . . remembering his exhortation that we “not lose heart in doing good, for in due time we shall reap if we do not grow weary” (Gal. 6:9).

**Addendum from the author, after his teenagers finished growing up:**

It was over twelve years ago that I wrote the article you have

just read. Since then, I've had a lot of time to reflect on the matter of parenting. If there is one thing I would add to the article, it is the statement in Psalm 127:1, "Unless the Lord builds the house, they labor in vain who build it."

I'm more convinced than ever that though I believe God's word does give us guidance concerning what we as parents should and should not do in relating to our children, being a parent is much more than simply "doing all the right things." It is at root a matter of trusting God to work in our children's lives in his own way and time . . . to accomplish in their lives what only He can. And of course, to trust that He will do the same in our own hearts and lives as well. Sometimes His ways are far beyond our understanding. I have met some who came from very difficult homes, who nonetheless have turned out to be wonderful people. On the other hand, I have met others who grew up in wonderful families, who nonetheless have chosen to walk a very painful path in life. All of this should cause us to make prayer our first priority as parents. There is no greater responsibility or privilege we have as parents than to pray for the children the Lord has entrusted to us. May we never cease to do so.

## Safe Sex?

Starlight dances off the sparkling water as the waves gently lap the shore. A cool breeze brushes across your face as you stroll hand in hand along the moonlit beach.

The party was getting crowded and the two of you decided to take a walk on the deserted waterfront. You've only known each other a short while but things seem so right. You laugh together and sense a longing to know this person in a deeper way.

You pause and tenderly gaze into each other's eyes, blood rushing throughout your body as your heart beats faster. Soon you are in each other's arms kissing softly at first, then fervently. You tug at each other's clothes and both kneel to the sand. The condom comes on. You join in passionate lovemaking, then relax, hearing only the gentle waves and each other's breathing, grateful that you are comfortable in mutual

care and that all is safe.

Or is it?

Was the condom you used enough to keep you safe? Aside from the emotional and psychological implications of your romantic encounter, realize that the condom is not a 100% guarantee of safety against AIDS for the same reason the condom is not a 100% guarantee of safety against pregnancy. There's always the possibility of human or mechanical error. Condoms can slip and break. They also can leak. Even the experts aren't certain condoms can guarantee against sexual transmission of the HIV virus.

Theresa Crenshaw, M.D., has been a member of the President's Commission on HIV. She is past president of the American Association of Sex Educators, Counselors, and Therapists<sup>{1}</sup> and once asked this question to 500 marriage and family therapists in Chicago: "How many of you recommend condoms for AIDS protection?"

A majority of the hands went up. Then she asked how many in the room would have sex with an AIDS infected partner using a condom. Not one hand went up.

These were marriage and family therapists, the "experts" who advise others. Dr. Crenshaw admonished them that, "It is irresponsible to give students, clients, patients advice that you would not live by yourself because they may die by it."<sup>{2}</sup> What does this tell you about the confidence experts have in condoms to protect persons against AIDS?

Not too long ago herpes caught the public's attention. Now, of course, the focus is on AIDS. As with herpes, it is very difficult to be absolutely certain that your partner in premarital sex does not have AIDS and there is no known cure. But, of course, there's a big difference between herpes and AIDS: herpes will make you sick; AIDS will kill you.

## Assessing the Risk

After I had made these remarks at a university in California, one young man asked me to explain what I meant when I said that condoms aren't safe. Consider this:

Condoms have an 85% (annual) success rate in protecting against pregnancy. That's 15% a failure rate.<sup>{3}</sup> But remember, a women can get pregnant only about six days per month.<sup>{4}</sup> HIV can infect a person 31 days per month.

Latex rubber, from which latex gloves and condoms are made, has tiny, naturally occurring voids or capillaries measuring on the order of one micron in diameter. Pores or holes five microns in diameter have been detected in cross sections of latex gloves.<sup>{5}</sup> ( A micron is one thousandth of a millimeter.) Latex condoms will generally block the human sperm, which is much larger than the HIV virus. (A human sperm is about 60 microns long and three to five microns in diameter at the head.<sup>{6}</sup> But the HIV virus is only 0.1 micron in diameter.<sup>{7}</sup> A five- micron hole is 50 times larger than the HIV virus. A one-micron hole is 10 times larger. The virus can easily fit through. It's kind of like running a football play with no defense on the field to stop you or shooting a soccer ball into an open goal. The hole is huge!

In other words, many of the tiny pores in the latex condom are large enough to pass the HIV virus (that causes AIDS) in its fluid medium.

One study focused on married couples in which one partner was HIV positive. When couples used condoms for protection, after one and one-half years, 17% of the healthy partners had become infected.<sup>{8}</sup> That' s about one in six, the same odds as Russian roulette.

One U.S. Food and Drug Administration (FDA) study tested condoms in the laboratory for leakage of HIV-sized particles.

Almost 33% leaked. [{9}](#) One in three.

One analysis of 11 studies on condom effectiveness found that condoms had a 31% estimated failure rate in protecting against HIV transmission. In other words, as the report stated, “These results indicate that exposed condom users will be about a third as likely to become infected as exposed individuals practicing “unprotected” sex... The public at large may not understand the difference between “condoms may reduce risk of” and “condoms will prevent” HIV transmission. It is a disservice to encourage the belief that condoms will prevent sexual transmission of HIV. Condoms will not eliminate risk of sexual transmission and, in fact, may only lower risk somewhat.” [{10}](#) Burlington County, New Jersey, banned condom distribution at its own county AIDS counseling center. Officials feared the legal liabilities if people contracted AIDS or died after using the condoms the county distributed. They were afraid the county would be held legally responsible for the deaths. [{11}](#)

## Over Easy Please

Latex condoms are sensitive to heat, cold, light, and pressure. The FDA recommends they be stored in “a cool, dry place, out of direct sunlight, perhaps in a drawer or closet.” [{12}](#) Yet they are often shipped in metal truck trailers without climate control. In winter the trailers are like freezers. In summer they’re like ovens. Some have reached 185F (85C) inside. A worker once fried eggs in a skillet next to the condoms, using the heat that had accumulated inside the trailer. [{13}](#) Are you thinking of entrusting you life to this little piece of rubber?

Is the condom safe? Is it safer? Safer than what?

Look at it this way: If you decide to drive the wrong way down a divided highway, is it safer if you use a seat belt? [{14}](#) You wouldn’t call the process “safe.” To call it “safer”

completely misses the point. It's still a very risky and a very foolish thing to do.

Remember that a national study found that condoms have a 15% failure rate with pregnancy. Perhaps you have flown in airplanes. Suppose only 15 crashes occurred for every 100 plane flights. Would you say airline travel was safe? Safer? [{15}](#) Would you still fly?

AIDS expert Dr. Redfield of the Walter Reed Hospital put it like this at an AIDS briefing in Washington, DC: If my teenage son realizes it's foolish to drink a fifth of bourbon before he drives to the party, do I tell him to go ahead and drink a six pack of beer first, instead? [{16}](#) According to Dr. Redfield, when you're considering AIDS, "Condoms aren't safe; they're dangerous." [{17}](#)

## The Test

You might say, "We've both been tested for AIDS. Neither of us has it."

The time span between HIV infection and detection of HIV antibodies has been found to be anywhere from three to six months, sometimes longer. [{18}](#) In rare cases it can even take years for signs of the virus to appear. [{19}](#) Dr. Redfield says that after he was exposed to HIV in his work, he waited 14 months before having sex with his wife. [{20}](#) Suppose you meet someone who says, "I had an HIV test a year ago; it was negative. I haven't had sex for a year. I just had another test; it was negative. I'm safe." You see the test results in writing. Is it safe to sleep with that person?

We all know how hormones can influence honesty. It comes down to this: Are they telling the truth about not being sexually active in the interim? Is there even a chance that person might twist the truth even slightly in order to get into bed with you? Even with the tests, it all boils down to trust.

That's why I say, "It's very difficult to be absolutely certain that your partner in premarital sex does not have AIDS."

"Condom sense" is very, very risky. Common sense says, "If you want to be safe, wait."

## **The Total You**

There are many other benefits to waiting (or to stopping until marriage, if you're a sexually active single). By "waiting," I mean reserving sex for marriage.

Sex involves your total personality—body, mind, and spirit. Besides being physically risky, premarital sex can hurt you emotionally and relationally. While you are single, sex can breed insecurity ("Am I the only one they've slept with? Have there been, or will there be, others?"). It can generate performance fears that can dampen sexual response. (If you fear even slightly that your acceptance by your partner hinges on your sexual performance, that fear can hamper your performance.) It can cloud the issue, confusing you into mistaking sexually charged sensations for genuine love.

After you marry, you might wonder, "If they slept with me before we married, how do I know that they won't sleep with someone else now that we are married?" (Marital faithfulness in the age of AIDS is, of course, important both emotionally and physically.) When disagreements crop up with your mate, will you be tempted to ask yourself, "Did we just marry on a wave of passion?" Don't forget flashbacks, those mental images of previous sexual encounters that have a nasty way of creeping back into your mind during arousal. Who wants to be thinking of previous sex partners while making love with their spouse? Worse, who wants their spouse to be thinking of previous sex partners?

Waiting until marriage can help you both have the confidence,

security, trust, and self respect that a solid, intimate relationship needs. "I really like what you said about waiting," said a recently married young woman after a lecture at Sydney University in Australia. "My fianc and I had to make the decision and we decided to wait." (Each had been sexually active in other previous relationships.) "With all the other tensions, decisions, and stress of engagement, sex would have been just another worry. Waiting 'till our marriage before we had sex was the best decision we ever made." [{21}](#)

## Why Is It Hard to Wait?

Apart from the obvious physical power of one's sex drive, there are other equally powerful emotional factors that can make it difficult to wait. A longing to be close to someone or a yearning to express love can generate intense desires for physical intimacy. Many singles today want to wait but lack the inner strength or self-esteem They want to be loved as we all do and may fear losing love if they postpone sex. They are frustrated when unable to control their sexual drives or when relationships prove unfulfilling.

Often sex brings an emptiness rather than the wholeness people seek through it. As one TV producer told me, "Frankly, I think the sexual revolution has backfired in our faces. It's degrading to be treated like a piece of meat." The previous night her lover had justified his decision to sleep around by telling her, "There's plenty of me for everyone." What I suspect he meant was, "There's plenty of everyone for me." She felt betrayed and alone.

I explained to her and to her TV audience that sexuality also involves the spiritual. One wise spiritual teacher understood our loneliness and longings for love. He recognized human emotional needs for esteem, acceptance, and wholeness and offered a plan to meet them. His plan has helped people to become whole "new creatures," [{22}](#) that is, "brand new person(s) inside." [{23}](#) He taught that we can be accepted just

as we are, even with our faults.{24} We can enjoy the self-esteem that comes from knowing who we are and that our lives can count for something significant.{25} He promised unconditional love to all who ask.{26} Once we know we're loved and accepted, we can have greater security to be vulnerable in relationships and new inner strength to make wise choices for safe living.{27} This teacher said, "You shall know the truth, and the truth shall make you free." {28} "My peace I give to you," He explained. "Do not let your hearts be troubled and do not be afraid." {29} Millions attest to the safety and security He can provide in relationships. His name, of course, is Jesus of Nazareth. I placed my faith in Him personally my freshman year at Duke, Two Lambda Chi influenced me in that direction. Though I was skeptical at first, it "has made all the difference," as Robert Frost would say.

Sex and spirituality are, of course, quite controversial topics. I realize that our International Fraternity contains a wide spectrum of beliefs on these issues. I offer these perspectives not to preach but to stimulate healthy thinking.

Diversity was one of the things that attracted me to our chapter at Duke. Politically, philosophically, and spiritually we ran the gamut. There were liberals, conservatives, Christians, Jews, atheists, and agnostics. We tried to respect one another and learn from each other even when we differed on issues like these. That is the spirit in which I offer these remarks; may I encourage you to consider them in the same way.

To summarize, the only truly safe sex is the lovemaking that occurs in a faithful monogamous relationship where both partners are HIV negative. Condoms may reduce the risk of HIV transmission somewhat, but they can't guarantee prevention. Please, don't entrust your life to something as risky as a condom.

# **Broken Homes, Broken Hearts – A Christian Perspective on Sex Outside of Marriage**

*Kerby Anderson examines the impact of teen pregnancies on our society from a Christian, biblical worldview perspective. He suggests steps we must take if Christians are to combat this problem of our American society.*

## **As the family goes, so goes society.**

Families are the bedrock of society. When families fall apart, society falls into social and cultural decline. Ultimately the breakdown of the American family is at the root of nearly every other social problem and pathology.

Just a few decades ago, most children in America grew up in intact, two-parent families. Today, children who do so are a minority. Illegitimacy, divorce, and other lifestyle choices have radically altered the American family, and thus have altered the social landscape.

Karl Zinsmeister of the American Enterprise Institute has said, “There is a mountain of scientific evidence showing that when families disintegrate, children often end up with intellectual, physical and emotional scars that persist for life.” He continues, “We talk about the drug crisis, the education crisis, and the problem of teen pregnancy and juvenile crime. But all these ills trace back predominantly to one source: broken families.”

Broken homes and broken hearts are not only the reason for so many social problems. They are also the reason for the

incumbent economic difficulties we face as a culture. The moral foundation of society erodes as children learn the savage values of the street rather than the civilized values of culture. And government inevitably expands to intervene in family and social crises brought about by the breakdown of the family. Sociologist Daniel Yankelovich puts it this way:

*Americans suspect that the nation's economic difficulties are rooted not in technical economic forces (for example, exchange rates or capital formation) but in fundamental moral causes. There exists a deeply intuitive sense that the success of a market-based economy depends on a highly developed social morality—trustworthiness, honesty, concern for future generations, an ethic of service to others, a humane society that takes care of those in need, frugality instead of greed, high standards of quality and concern for community. These economically desirable social values, in turn, are seen as rooted in family values. Thus the link in public thinking between a healthy family and a robust economy, though indirect, is clear and firm.*

## **Illegitimacy is our most important social problem.**

One of the most significant factors contributing to the breakdown of the family has been the steady rise of unwed births. Since 1960, illegitimate births have increased more than 400 percent. In 1960, 5 percent of all births were out of wedlock. Thirty years later nearly 30 percent of all births were illegitimate. Among blacks two out of every three births are illegitimate.

To put this astonishing increase in illegitimate births in perspective, compare 1961 with 1991. Roughly the same number of babies were born in both years (about 4 million). But in 1991, five times as many of these babies were born out of wedlock.

Social commentator Charles Murray believes that **“illegitimacy is the single most important social problem of our time—more important than crime, drugs, poverty, illiteracy, welfare or homelessness because it drives everything else.”** The public costs of illegitimacy are very high. “Children born out of wedlock tend to have high infant mortality, low birth weight (with attendant morbidities), and high probabilities of being poor, not completing school, and staying on welfare themselves. As a matter of public policy, if not of morality, it pays for society to approve of marriage as the best setting for children, and to discourage having children out of wedlock.”

In her famous article in *Atlantic Monthly* entitled “Dan Quayle Was Right,” Barbara Dafoe Whitehead warned Americans of the cost of ignoring the breakdown of the family:

*If we fail to come to terms with the relationship between family structure and declining child well-being, then it will be increasingly difficult to improve children’s life prospects, no matter how many new programs the federal government funds. Nor will we be able to make progress in bettering school performance or reducing crime or improving the quality of the nation’s future work force—all domestic problems closely connected to family breakup. Worse, we may contribute to the problem by pursuing policies that actually increase family instability and breakup.*

While speaking of Dan Quayle, it might be wise to remind ourselves of what the former Vice-President said that brought such a firestorm from his critics. While speaking to the Commonwealth Club in San Francisco, Vice President Quayle argued that “It doesn’t help matters when prime time TV has Murphy Brown—a character who supposedly epitomized today’s intelligent, highly paid, professional woman—mocking the importance of fathers by bearing a child alone, and calling it just another lifestyle choice.”

At the time, one would have thought the Vice-President had uttered the greatest blasphemy of our time. Yes, he was using a fictional character to make a point. Yes, he was challenging the tolerant, politically-correct conventions of the time. But he was addressing an important issue neglected by so many.

Fortunately, a year later *Atlantic Monthly* magazine devoted the cover of its April 1993 issue to the story: "Dan Quayle Was Right. After decades of public dispute about so-called family diversity, the evidence from social-science research is coming in: The dissolution of two-parent families, though it may benefit the adults involved, is harmful to many children, and dramatically undermines our society."

The conclusion should not be startling, yet in a society that no longer operates from a Christian world and life view, it has nearly become front page news. For decades, the United States has engaged in a dangerous social experiment. Two parents are no longer seen as necessary. Stable, intact families are no longer seen as important. We are trying to reinvent the family and are finding out the devastating consequences of illegitimacy, divorce, and other lifestyle choices. As a society, we must return to the values of abstinence, chastity, fidelity, and commitment. Our desire to reject Christian family values has inevitably lead to the decline of Western civilization. It is time to find the road back to home.

## **The flood of teenage pregnancies is destroying our social fabric.**

One of the most significant factors contributing to the breakdown of the family has been the steady rise of unwed births. Since 1960, illegitimate births have increased more than 400 percent. In 1960, 5 percent of all births were out of wedlock. Thirty years later nearly 30 percent of all births were illegitimate. Among blacks two out of every three births

are illegitimate.

One of the most significant factors contributing to the breakdown of the family has been the steady rise of unwed births. Since 1960, illegitimate births have increased more than 400 percent. In 1960, 5 percent of all births were out of wedlock. Thirty years later nearly 30 percent of all births were illegitimate. Among blacks two out of every three births are illegitimate.

One of the driving forces of illegitimacy is births to unmarried teenagers. Every 64 seconds, a baby is born to a teenage mother, and every five minutes a baby is born to a teenager who already has a child. More than two thirds of these births are to teen girls who are not married.

Becoming a teenage parent significantly decreases the chance that the young mother will be able to complete high school, attend college, and successfully compete for a job. She is much more likely to rear the child in poverty than girls who do not become mothers as teenagers. "When teenagers have babies both mothers and children tend to have problems—health, social, psychological, and economic. Teens who have children out of wedlock are more likely to end up at the bottom of the socio-economic ladder."

If the increase in teenage pregnancy isn't disturbing enough, there are other disturbing trends. A growing number of adults are having sex with teens. This is more than just Joey Buttafuoco and Amy Fisher or Woody Allen and Soon-Yi Previn. Social statistics show that adult males are fathers of two thirds of the babies born to teenage girls.

In some ways, this is not a new phenomenon. In 1920, for example, 93 percent of babies born to teenagers were fathered by adults. But the difference is that pregnant teens no longer marry the father. Today, 65 percent of teenage moms are unmarried. Many of these kids are destined to spend a lifetime

in a cycle of poverty and welfare dependency.

Why teenage girls become sexually involved with adult males is sometimes difficult to discern. A desire for a mature male and teenage insecurity are significant reasons. Teenage girls from broken homes or abusive homes often are easy prey for adult men, which may explain why adult men seek out teenager girls. In many cases, teen sex is not consensual. Girls under the age of 18 are victims of approximately half the rapes each year.

Stemming the tide of teen pregnancy, and reforming the current welfare system that often encourages it, are important action points. But doing so must take into account that adult males are a significant reason why teenage girls are becoming pregnant.

Whether we look at the increase in illegitimate births in general or teenage pregnancy in particular, we can see a disturbing trend. In essence, Americans have been conducting a social experiment for the last three decades. And the evidence clearly points to major problems when children are reared in families without two parents. Illegitimate births are part of the reason for the breakdown of the family; divorce is the other.

## **We must honor and promote sexual abstinence.**

Thus far we have been talking about the problems. Now it's time to propose a solution. There are two parts to this approach. First, we must teach sexual abstinence. A fundamental reason for the increase in unwed births is teenage sexual promiscuity. Reduce teenage sexuality and you will reduce illegitimacy. Fortunately, the abstinence message seems to be gaining in popularity and getting the media attention it deserves.

or example, the front page of the Sunday *New York Times* Style

section featured the surprising headline: "Proud to Be a Virgin: Nowadays, You Can be Respected Even if You Don't Do It." And the March 1994 issue of *Mademoiselle* featured an article proclaiming "The New Chastity." The article wondered if "saying no to sex might turn out to be the latest stage in the sexual revolution." *Mademoiselle* found that views on sexuality seem to be changing. Virgins, for example, are no longer seen as individuals who are fearful or socially inept. In fact, abstinence is now being equated with strength of will and character. Those once labeled "carefree" are now considered "careless" in light of the AIDS and STDs.

One of the most visible campaign for abstinence has come from the "True Love Waits" campaign by the Southern Baptist Convention (SBC) begun in the spring of 1993. Students pledge: "Believing that true love waits, I make a commitment to God, myself, my family, those I date, my future mate, and my future children to be sexually pure until the day I enter a covenant marriage relationship."

A grassroots movement to promote abstinence through a variety of programs has been spreading throughout the country. Crisis Pregnancy Centers provide speakers to address the issue of abstinence. Untold groups—with names like "Aim for Success" and "Best Friends" and "Athletes for Abstinence"—are spreading the positive message of abstinence to teens who need to hear an alternative to the safe sex message.

There are substantial personal benefits to abstinence. But the greatest benefit to society is a reduction in the illegitimate birth rate which drives nearly all of the social problems discussed in this book.

## **We must target teen pregnancy.**

Now we must address the second part of the problem; that is, we must target teen pregnancy. The problem with teenage sex is not simply that teens are having sex. In approximately half

the cases, adults are having sex with teenagers. State laws governing statutory rape are often called a "fictitious chastity belt" since law enforcement often ignore the laws.

The reasons for lax enforcement are varied, but they surely include the fallout from the sexual revolution and the children's rights movement. As a society, we have come to accept the notion that even young teenagers are engaging in consensual sex. While there may be some tawdry publicity when a high profile entertainer like Woody Allen or Kelsey Grammar is accused of sex with a teenager, generally the issue is ignored.

But the issue cannot be ignored. "Welfare reform, sex education and teen pregnancy prevention programs and welfare reform are doomed to failure when they ignore the prevalence of adult-teen sex." Education about the problem and enforcement of statutory rape laws would substantially reduce the number of unwed teens.

## **We must honor and promote strong marriages.**

Now I would like to propose additional solutions to the problem of family breakdown. First, we must teach marriage principles. Marriages are falling apart and other marriages never begin as sexual partners choose to live together rather than get married. Churches and Christian organizations must teach marriage principles so that marriages will last. Once built on commitment, today's marriages are a contract: as long as love shall last. Sound, biblical education is necessary to put marriages back on a firm foundation.

Fortunately, a growing number of effective organizations are providing that needed education. Family Life Ministry holds weekend Family Life Conferences through out the country and the world to packed audiences eager to learn more about how to build strong marriages and families. The Marriage Encounter

program has been providing the same important teaching in church and retreat settings. And lots and lots of books, tapes, videos, and other seminars are focusing needed attention on the principles that will build strong marriages and allow them to flourish.

## **We must honor and support fatherhood.**

Second, we must emphasize fatherhood. As more and more children grow up in single-parent homes (which are primarily female-headed homes), fathers appear irrelevant and superfluous. Not only are they seen as expendable; they are often seen as part of the problem.

Yet the consequences of fatherless homes is devastating. "More than 70 percent of all juveniles in state reform institutions come from fatherless homes." Children who grow up without fathers are more likely to be involved in criminal behavior because they lack a positive male role model in their lives. Fathers are not irrelevant. They may indeed spell the difference between success and failure for their children.

Often fatherless homes feed the cycle of illegitimacy itself. "Young white women who grow up without a father in the home are more than twice as likely to bear children out of wedlock. And boys living in a single-parent family are twice as likely to father a child out of wedlock as boys from intact homes."

Fortunately, there are many ministries encouraging men to stand with their families. Gatherings like the Promise Keepers conferences nationwide are highly visible symbols of a much greater movement of men (individual churches or parachurch organizations) who have dedicated themselves to running their families on biblical principles. Groups like Mad Dads (Men Against Destruction Defending Against Drugs and Social disorder) have been organized to encourage fathers in high crime urban areas. Especially critical are young urban (often black) youths who do not have strong male role models to

emulate. One organizer said, "They saw pimps and hustlers and dope dealers and gang bangers and hypersexual individuals who like to make babies but didn't assume the responsibility of taking care of them—so why should the kids? And so our first goal was just to mobilize strong, black fathers who were drug-free, who were willing to stand up and be role models, giving our kids another group of men they could look at."

Building strong families must include building families with fathers. Fatherlessness is one of the primary causes of social disintegration. Parenting cannot be left to mothers and grandmothers. Fathers are essential.

## **Why Wait Till Marriage? – A Christian Perspective**

*Jimmy and Jerry take a biblical worldview look at the question of premarital sex or fornication. They clearly show that regardless of the dominant teaching of the culture, the Bible describes the role of sex as far deeper in meaning and impact than simple physical intercourse.*

Crucial moral battles are being fought in our culture. Nowhere is this seen more vividly than in the present sexual attitudes and behaviors of Americans. The average young person experiences many pressures in the formation of personal sexual standards and behavior.

The fact that some standard must be chosen cannot be ignored. Sex is here to stay, and it remains a very basic force in our lives. We cannot ignore its presence any more than we can

ignore other ordinary human drives.

This essay explores contemporary sexual perspectives within a biblical framework. Each of us needs to think through the implications of sexual alternatives and choose a personal sexual ethic based on intellectual and Christian factors, not merely biological, emotional, or social ones.

## **Sex and Love**

Before we begin our survey of various perspectives, we need to face squarely the relationship of the physical act of sexual intercourse to the more intangible aspects of a meaningful relationship between two human beings.

Is having sex really making love? Modern case studies, psychological insights, church teachings, and biblical premises all seem to suggest not. As psychoanalyst Erich Fromm puts it, "To love a person productively implies to care and to feel responsible for his life, not only for his physical powers but for the growth and development of all his human powers."[\[1\]](#)

If sex is merely a physical thing, then masturbation or other forms of autoeroticism should provide true and complete sexual satisfaction. Such is not the case. Alternatives to normal sexual intercourse may satisfy physically, but not emotionally. Meaningful sexual activity involves the physical union of a man and a woman in a relationship of mutual caring and intimacy.

Every normal person has the physical desire for sexual activity accompanied with a desire to know and be known, to love and be loved. Both desires make up the real quest for intimacy in a relationship; sexual intercourse represents only one ingredient that allows us to experience true intimacy.

A maximum sexual relationship exists where mutual communication, understanding, affection, and trust have

formed, and two people have lastingly committed themselves to each other in a permanent relationship. The more of these qualities that are present, the deeper the intimacy and the more meaningful the relationship. It becomes more valuable as time passes because it is one of a kind—unique. To spread the intimacy around through a variety of sexual liaisons destroys the accumulated value of the previous relationship(s) and dilutes and scatters (in little doses to a number of people) what one has to give.

A real challenge faces young people today. Given the choice between hamburger at five o'clock or filet mignon at seven-thirty, are there any good reasons to forego the hamburger and wait for the filet? Why not both? Why not take the hamburger now **and** the filet later?

The latter attitude is precisely the rationale of those who encourage sexual activity outside of marriage. But it is not possible to have both without encountering problems later. Too many hamburgers ruin one's taste and appreciation for filet and tend to turn filet into hamburger as well!

## **Contemporary Arguments for Premarital Sex**

Now we will begin to consider the arguments that are presented to justify sexual activity before and outside of marriage. We will analyze the arguments briefly and explore the general implications of each rationale so that **you can decide** which will provide the best path for your future.

### **Biological Argument**

Perhaps the most common reason used to justify premarital sexual activity is that the sex drive is a basic biological one. The argument is as old as the Bible, where Paul states in 1 Corinthians 6:13, "Food is for the stomach and the stomach is for food." The Corinthians were using the biological argument to justify their immorality, but Paul explained that

the analogy to the sex appetite was (and is) fallacious. Humans cannot live without food, air, or water. But we can live without sex.

Nature says several things on this point. First, God has built into the natural world a mechanism for sexual release: nocturnal emissions, or orgasmic release during dreams. Second, nature rejects human promiscuity, as the growing problem of sexually-transmitted diseases makes abundantly clear.

Couples who confine sex to their marriage partners face no such danger from disease. Further, we can safely conclude that abstinence does not impair one's health. Sociologist Robert Bell quips, "There appear to be no records of males hospitalized because girls refused to provide sexual outlets."  
[{2}](#)

While recognizing that human beings share many common characteristics with animals, we do not find comparable sexual behavioral patterns in the animal world. Human sexuality is unique in that it *includes*, but *transcends*, physical reproductive elements. It reaches an intimacy unknown among animals. Humans are different from animals.

## Statistical Argument

A second popular argument reasons that everyone is doing it. First, we must categorically emphasize that this is not a true statement. A recent study (1991) of college freshmen shows that "about two-thirds of men (66.3 percent) and slightly more than one-third of the women (37.9 percent) support the idea of sex between people who have known each other only for a short time."[{3}](#) As sobering as such statistics may be, they obviously indicate that not everyone is sexually active.

Further, **statistics** do not establish moral values. Is something right because it happens frequently or because many people believe it? A primitive tribe may have a 100 percent

majority consensus that cannibalism is right! Does that make it right? A majority can be wrong. If a **society** sets the standards, those standards are subject to change with the whim and will of the majority. In one generation slavery may be right and abortion wrong, as in early nineteenth-century America; but in another generation, abortion is in and slavery is out, as today.

There are enough young people in any school or community who prefer to wait until marriage that the young person who wants to wait has plenty of company. Each person must decide where he or she wants to be in a given statistical analysis of current sexual mores and behavior.

## **Proof of Love**

A third argument suggests that sexual activity tests or provides proof of love. Supposedly, it symbolizes how much the other cares. One therefore exerts pressure on the more reluctant partner to demonstrate a certain level of care. Reluctant partners succumbing to this pressure often do so with an underlying hope that it will somehow cement the relationship and discourage the other partner from searching elsewhere for a less hesitant friend.

Any person who insists on making sex the ultimate proof of a genuine relationship isn't saying "I love you," but rather "I love it." True love concerns itself with the well-being of the other person and would not interpret sexual hesitation in such a selfish way. Furthermore, the person adopting this practice develops a pattern of demonstrating love by purely sexual responsiveness. Ultimately he or she enters marriage with something of a distortion as to what real intimacy means, to say nothing of having to deal with the memories of previous loves. Some behaviors are irreversible, and this process is like trying to unscramble an egg. Once it's done, it's done.

The broader perspective sees sex as an integral and important

part of a meaningful relationship but not the totality of it. Remembering this will help any individual to make the right decision to refrain from sexual involvement if a potential partner puts on the pressure to make sex the test of a meaningful relationship.

## **Psychological Argument**

The psychological argument is also a popular one and is closely tied to the biological argument previously discussed. Here's the question: Is sexual restraint bad for you?

Sublimating one's sex drive is not unhealthy. In sublimation the processes of sexual and aggressive energy are displaced by nonsexual and nondestructive goals.

But guilt, unlike sublimation, can produce devastating results in human behavior. It is anger turned inward, producing depression, a lowered self-esteem, and fatigue. Further, chastity and virginity contribute very little to sexual problems. Unsatisfying relationships, guilt, hostility toward the opposite sex, and low self-esteem do. In short, there are no scars where there have been no wounds.

In this hedonistic society, some persons need no further justification for sexual activity beyond the fact that it's fun. "If it feels good, do it!" says the bumper sticker. But the fun syndrome forces us to sacrifice the permanent on the altar of the immediate.

The sex act itself is no guarantee of fun. Initial sex experiences outside of marriage are often disappointing because of high anxiety and guilt levels. Fear of discovery, haste, and lack of commitment and communication all combine to spoil some of the fun. Further, there is no way to avoid the exploitation of someone in the relationship if it's just for fun. Sometimes one person's pleasure is another's pain. No one likes to be or feel used.

Marilyn Monroe was a sex symbol for millions. She said, "People took a lot for granted; not only could they be friendly, but they could suddenly get overly friendly and expect an awful lot for a very little." {4} She felt used. She died naked and alone, with an empty bottle of sleeping pills beside a silent telephone. Was the fame and fun worth it? Evidently she thought not.

## **Experiential Argument**

This perspective emphasizes a desire on the part of an individual not to appear like a sexual novice on the wedding night. One answer to this is to have enough sexual experience prior to marriage so that one brings practice, not theory to the initial sexual encounter in marriage. But the body was designed to perform sexually and will do so given the opportunity.

This is not to say that sexual skill cannot be gained through experience. It is to say that every skill acquired by humans must have a beginning point. If the idea of two virgins on their wedding night brings amusement to our minds instead of admiration, it is actually a sad commentary on how far we have slipped as individuals and as a culture.

It must be emphasized again that healthy sexual adjustment depends much more on communication than technique. World-famous sex therapists Masters and Johnson found

*Nothing good is going to happen in bed between a husband and wife unless good things have been happening between them before they go into bed. There is no way for a good sexual technique to remedy a poor emotional relationship.* {5}

In other words, a deeply-committed couple with **no** sexual experience is far ahead of a sexually-experienced couple with shallow and tentative commitment, as far as the marriage's future sexual success is concerned.

## **Compatibility Argument**

A corollary to the experiential argument is the one of compatibility. The idea is, How will I know if the shoe fits unless first I try it on? A foot stays about the same size, but the human sex organs are wonderfully stretchable and adaptable. A woman's vagina can enlarge to accommodate the birth of a baby or to fit a male organ of any size. Physical compatibility is 99 percent guaranteed, and the other 1 percent can become so with medical consultation and assistance.

Of greater importance is to test person-to-person compatibility. Sexual dysfunction in young people is usually psychologically based. Building bridges of love and mutual care in the non-physical facets of the relationship are the sure roads to a honeymoon that can last a lifetime.

## **Contraceptive Argument**

The contraceptive argument supposedly takes the fear of pregnancy out of sexual activity and gives moderns a virtual green light. Actually, the light is at most pale green and perhaps only yellow. The simple fact is that pregnancy (along with sexually-transmitted diseases) remains a possibility.

Beyond the question of contraceptive use is the entire area of unwanted children. There are no good alternatives for children born out of wedlock. Do we have the right to deprive children of life or a secure family setting and loving parents to supply their basic needs? Ironically, even severely battered children choose to be with their parents over other alternatives. Parental love and security are highly prized.

Sexual intimacy between a man and a woman is not exclusively their private affair. Sexual intercourse must take place with a view toward facing the consequences. The time of moral decision in sexual matters comes before one decides to have sex with someone, not later when unforeseen circumstances take

things the wrong way.

## **Marital Argument**

Perhaps the most prominent argument for premarital sex among Christians is the marital argument, which says, "We are in love and plan to marry soon. Why should we wait?"

Dr. Howard Hendricks, an authority on the family, comments that the best way to mortgage your marriage is to play around at the door of marriage.<sup>{6}</sup> Loss of respect and intensity of feelings may occur, as well as guilt and dissatisfaction. Restraint for a time adds excitement to the relationship and makes the honeymoon something very special, not a continuation of already-established patterns. Some couples also see little value in a public declaration of marital intent. Or they may think the formality of a wedding is the equivalent of dogma. Those who prefer no public declaration but rather seek anonymity may be saying something about the depth (or lack thereof) of their commitment to one another. Do they have their fingers crossed?

Contemporary studies indicate that the marital argument is not sound. Of 100 couples who cohabit, 40 break up before they marry. Of the 60 who marry, 45 divorce—leaving only 15 of 100 with a lasting marriage. Thus, cohabitation has two negative effects: it sharply reduces the number who marry, and dramatically increases the divorce rate of those who do.<sup>{7}</sup>

Engaged couples, according to Paul in 1 Corinthians 7:36-37, should either control their sexual drives or marry. Intercourse, then, is not proper for engaged couples. They should either keep their emotions in check or marry.

## **Conclusion**

We have examined some of the major arguments used to justify premarital sex. If these are the strongest defenses of sex outside of marriage, the case is weak. Our brief trek through

the wilderness of contemporary sexual ideas has led to some virtual dead ends.

There are good reasons to make a commitment to limit our sexual experience to a time when the sex act can be reinforced in a context of permanent love and care. From this perspective, virginity is not viewed as something that must be eliminated as soon as possible, but as a gift to treasure and save for a special and unique person.

The biblical standard that puts sex within the fidelity and security of marriage is the most responsible code that has ever been developed. You are justified in following it without apology as the best standard for protecting human, moral, and Christian values that has been devised.

Some reading this may have already had sexual experience outside of marriage. The data we have discussed is not intended to condemn or produce guilt.

The good news is that Jesus Christ came for the expressed purpose of forgiving our sins, sexual and all other. Jesus, who is the same yesterday, today, and forever, will forgive us. The real question now is, What shall we do with the future? Christ can cleanse the past, but He expects us to respond to the light He gives us. Hopefully this discussion will help you strengthen your convictions with regard to sexual decisions and behavior in the days ahead. As the adage says, today is the first day of the rest of your life.

## **Safe Sex and the Facts – A Christian Perspective**

*Dr. Ray Bohlin provides a look at the many problems surrounding the idea of safe sex from a Christian, biblical worldview perspective as well as a scientific perspective. He provides a sound argument for supporting the Christian view of sex being reserved for the marriage relationship.*

At age 16 John had sex with Andrea. Just one time. He enjoyed the experience but felt guilty and decided the risk of sexually transmitted diseases (STDs) and pregnancy were just too great. He did not have sex again until nine years later when he married Cindy, who was a virgin. Three months after their wedding Cindy began having painful symptoms. Unknowingly John, who had never had any symptoms of disease, had brought two STDs into his marriage. But John and Cindy were lucky;

they both responded to treatment and are healthy today. Many others, however, are not so fortunate. Today STDs are at unprecedented and epidemic proportions. Thirty years of the sexual revolution is paying an ugly dividend, and those most at risk are teenagers. This is true partially because teenagers are more sexually active than ever before, but also because teenage girls are more susceptible to STDs than males or adult females.

While a few STDs can be transmitted apart from sex acts, all are transmissible by the exchange of bodily fluids during intimate sexual contact. I want to discuss the severity of the problem as well as what must be done if we are to save a majority of the next generation from the shame, infertility, and sometimes death, that may result from STDs.

If you are not aware of some of the following statistics, then prepare to fasten your seat belt because what I have to report is not pretty. The information I am about to share is from data gathered by the Medical Institute for Sexual Health in Austin, Texas.(1) All of these statistics are readily available from reputable medical and scientific journals.

Today, there are approximately 25 STDs. A few can be fatal. Some are relatively harmless, but all are humiliating. Many women are living in fear of what their future may hold as a result of STD infection. It is estimated that 1 in 5 Americans between the ages of 15 and 55 are currently infected with one or more viral STDs, and 12 million Americans are newly infected each year. That's nearly 5% of the entire population of the U.S.! Of these new infections, 63% involve people less than 25 years old.

This epidemic is a recent phenomenon. Some young people have parents who may have had multiple sexual part-ners with relative impunity and conclude that they too are safe from disease. However, most of these diseases were not around 20 to 30 years ago. Prior to 1960, there were only two prevalent

sexually transmitted diseases: syphilis and gonorrhea. Both were easily treatable with antibiotics.

In the sixties and seventies this relatively stable situation began to change. For example, in 1976, chlamydia first appeared in increasing numbers in the U.S. Chlamydia, particularly dangerous to women, is now the most common bacterial STD in the country. In 1981, human immuno-deficiency virus (HIV), the virus which causes AIDS, was identified. By early 1993, between 1 and 2 million Americans were infected with HIV or AIDS, over 12 million were infected worldwide, and over 160,000 had died in the U.S. alone. Then herpes was added to the mix. This STD now infects 30 million people.

In 1985, human papilloma virus (HPV) began a dramatic increase. This virus can result in venereal warts and will often lead to deadly cancers.

By 1990, penicillin-resistant strains of gonorrhea were present in all fifty states, and by 1992 syphilis was at a 40-year high. As of 1993, pelvic inflammatory disease (PID), which is almost always caused by gonorrhea or chlamydia, was affecting 1 million new women each year. This includes 16,000 to 20,000 teenagers. This infection can result in pelvic pain and infertility and is the leading cause of hospitalization for women between the ages of 15 and 55, apart from pregnancy.

Pelvic inflammatory disease can result in scarred fallopian tubes which block passage of a fertilized egg. The fertilized egg, therefore, cannot pass on to the uterus, and the growing embryo will cause the tube to rupture. From 1960 to 1990 there was a 400% increase in tubal pregnancies, most of which were caused by STDs. Making matters even worse is the fact that 80% of those infected with an STD don't know it and will unwittingly infect their next sexual partner.

# The Medical Facts of STDs

Syphilis is a terrible infection. In its first stage, the infected individual may be lulled into thinking there is little wrong since the small sore will disappear in 2 to 8 weeks. The second and third stages are progressively worse and can eventually lead to brain, heart, and blood vessel damage if not diagnosed and treated. The saddest part is that syphilis is 100% curable with penicillin, yet there is now more syphilis than in the late 1940s, and it is spreading rapidly.

Chlamydia, a disease which only became common in the mid-1980s, infects 20 to 40% of some sexually active groups including teenagers. In men, chlamydia can cause infertile sperm, a condition reversible with antibiotics. In women, however, the infection is devastating. An acute chlamydia infection in women will result in pain, fever, and damage to female organs. A silent infection can damage a woman's fallopian tubes without her ever knowing it. A single episode of chlamydia PID can result in a 25% chance of infertility. With a second infection, the chance of infertility rises to 50%. This is double the risk of gonorrhea.

Treatment with antibiotics is not always successful. One study reported that 18% showed a recurrence of infection within 3 weeks. As many as 14% of teenagers do not respond to treatment, and ultimately require a hysterectomy. It is an overwhelming burden for an 18- or 19-year-old girl to have to face the fact that she will never be able to bear a single child.

The human papilloma virus (HPV) is an extremely common STD. One study reported that at the University of California, Berkeley, 46% of the sexually active coeds were infected with HPV. Another study reported that 38% of the sexually active females between the ages of 13 and 21 were infected.

HPV is the major cause of venereal warts which are extremely difficult to treat and may require expensive procedures such as laser surgery. HPV can result in pre-cancer or cancer of the genitalia. By causing cancer of the cervix, this virus is presently killing more women in this country than AIDS, or over 4,600 women in 1991. HPV can also result in painful intercourse for years after infection even though other visible signs of disease have disappeared.

And of course there is the human immunodeficiency virus, or HIV, the virus that causes AIDS. The first few cases of AIDS were only discovered in 1981; now, in the U.S. alone, there are between 1 and 2 million infected with this disease. As far as we know, all of these people will die in the next ten to fifteen years. As of early 1993, approximately 160,000 had already died.

In 1991 a non-random study at the University of Texas at Austin showed that 1 in 100 students who had blood drawn for any reason at the university health center was HIV infected.

While the progress of the disease is slow for many people, all who have it will be infected for the rest of their lives. There is no cure, and many researchers are beginning to despair of ever coming up with a cure or even a vaccine (as was eventually done with polio). In 1992, 1 in 75 men was infected with HIV and 1 in 700 women. But the number of women with AIDS is growing. In the early years of the epidemic less than 2% of the AIDS cases were women. Now the percentage is 12%.

## **Teenagers Face Greater Risks from STDs**

One of the statistics I have mentioned is that teenagers are particularly susceptible to STDs. This fact is alarming since more teens are sexually active today than ever before. An entire generation is at risk, and the saddest part about it is that most of them are unaware of the dangers they face.

Teenagers must be given the correct information to help them realize that saving themselves sexually until marriage is the only sure way to stay healthy.

The medical reasons for teens' high susceptibility to STDs relates specifically to females. The cervix of a teen-age girl has a lining (ectropion) which produces mucus that is a great growth medium for viruses and bacteria. As a girl reaches her 20s or has a baby, this lining is replaced with a tougher, more resistant lining. Also during the first two years of menstruation, 50% of the periods occur without ovulation. This will produce a more liquid mucus which also grows bacteria and viruses very well. A 15-year-old girl has a 1-in-8 chance of developing pelvic inflammatory disease simply by having sex, whereas a 24-year-old woman has only a 1-in-80 chance in the same situation.

Teenagers do not always respond to antibiotic treatment for pelvic inflammatory disease, and occasionally such teenage girls require a hysterectomy. Infertility is an increasing problem in our society. It is estimated that one-fourth to one-third of all female infertility in marriage is a result of STDs.

Teenagers are also more susceptible to human papilloma virus, HPV. Rates of HPV infection in teenagers can be as high as 40%, whereas in the adult population, the rate is less than 15%. Teenagers are also more likely to develop precancerous growths as a result of HPV infection than adults. These precancerous growths in teenagers are also more likely to develop into invasive cancer than in adults.

Apart from the increased risk from STDs in teens, teen-age pregnancy is also at unprecedented levels. In 1985 there were over 1 million teen-age pregnancies; 400,000 of these ended in abortion. Abortion is not a healthy procedure for anyone to undergo, but this is especially true for a teenager. Not getting pregnant to begin with is far better. Oral

contraceptives are not as effective with teenagers, mainly because teens are more apt to forget to take the pill. Over a one-year period, as many as 9 to 18% of teenage girls using oral contraceptives become pregnant.

Finally, when teenagers start having sex earlier in life, they are much more likely to have multiple sexual partners, a behavior that puts them at greater risk for STD. When teenagers become sexually active before they are 18 years of age, 75% of them will have more than 2 partners and 45% of them will have 4 or more partners. If sexual activity begins after the 19th birthday, only 20% will have 2 or more partners and only 1% will have 4 or more partners. (These statistics were reported by the Centers for Disease Control after interviewing people in their 20s.)

## **Is Safe Sex Really the Answer?**

I must now take a hard look at the message of safe sex which is being taught to teens at school and through the media.

Some people believe that if teens can be taught how to use contraception and condoms effectively, rates of pregnancy and STD infection will be reduced dramatically. But common sense and statistics tell us otherwise. At Rutgers University, the rates of infection of students with STD varied little with the form of contraception used. For example, 35 to 44% of the sexually active students were infected with one or more STDs whether they used no contraceptive, oral contraceptive, the diaphragm, or condoms. It is significant to note that condoms, the hero of the safe sex message, provided virtually no protection from STDs.

Will condoms prevent HIV infection, the virus that causes AIDS? While it is better than nothing, the bottom line is that condoms cannot be trusted. A study from Florida looked at couples in which one partner was HIV positive and the other was negative. They used condoms as protection during

intercourse. After 18 months, 17% of the previously uninfected partners were HIV positive. That is a one-in-six chance, the same as in Russian roulette.

Condoms do not even provide 100% protection for the purpose for which they were designed: prevention of pregnancy. One study from the School of Medicine Family Planning Clinic at the University of Pennsylvania reported that 25% of patients using condoms as birth control conceived over a one-year period. Other studies indicate that the rate of accidental pregnancy from condom-protected intercourse is around 15% with married couples and 36% for unmarried couples.

Condoms are inherently untrustworthy. The FDA allows as many as one in 250 to be defective. Condoms are often stored and shipped at unsafe temperatures which weakens the integrity of the latex rubber causing breaks and ruptures. Condoms will break 8% of the time and slip off 7% of the time. There are just so many pitfalls in condom use that you just can't expect immature teenagers to use them properly. And even if they do, they are still at risk.

Studies are beginning to show that school-based sex education that includes condom use as the central message, does not work. A study in a major pediatric journal concluded that the available evidence indicates that there is little or no effect from school-based sex- education on sexual activity, contraception, or teenage pregnancy.(2) This study evaluated programs that emphasized condoms. In addition, programs that emphasize condoms tend to give a false sense of security to sexually active students and make those students who are not having sex feel abnormal.

The list of damages from unmarried adolescent sexual activity is long indeed. Apart from the threat to physical health and fertility, there is damage to family relationships, self-confidence and emotional health, spiritual health, and future economic opportunities due to unplanned pregnancy. Condom-

based sex- education does not work.

## **Saving Sex for Marriage is the Common Sense Solution.**

The epidemic of sexually transmitted diseases is running rampant in this country and around the world. Diseases such as chlamydia, human papilloma virus, herpes, hepatitis B, trichomonas, pelvic inflammatory disease, and AIDS have joined syphilis and gonorrhea in just the last 30 years. There is no question that the fruits of the sexual revolution have been devastating. I have also shown how our teenagers are at a greater risk for sexually transmitted diseases than are adults and that sex-education based on condom use is ineffective and misleading. There is only one message that offers health, hope, and joy to today's teenagers. We need to teach single people to save intercourse for marriage.

Sex is a wonderful gift, but if uncontrolled, it has a great capacity for evil as well as good. Our bodies were not made to have multiple sex partners. Almost all risk of STD and out-of-wedlock pregnancy can be avoided by saving intercourse for marriage. And it can be done.

Statistics show clearly that in schools that teach a sex education program that emphasizes saving intercourse for marriage, the teen pregnancy rate drops dramatically in as little as one year. In San Marcos, California, a high school used a federally funded program ("Teen Aid") which emphasizes saving intercourse until marriage. Before using the program there were 147 pregnancies out of 600 girls. Within two years, the number of pregnancies plummeted to 20 out of 600 girls.(3) As of 1992, San Marcos was still using this program and was still satisfied with it. In Jessup Georgia, upon instituting the "Sex Respect" program, the number of pregnancies out of 340 female students dropped from 17 to 13 to 11 to 3 in successive years.

Delaying intercourse until teens are older is not a naive proposal. Over 50% of the females and 40% of the males between 15 and 19 have not had intercourse. They are living proof that teens can control their sexual desires. Of those who had at least one sexual experience, 20% had sex in the past but were not currently sexually active. Therefore, a minority of students are sexually active.

Condom-based sex-education programs basically teach teen-agers that they cannot control their sexual desires, and that they must use condoms to protect themselves. It is not a big leap from people being unable to control their sexual desires to being unable to control their hate, greed, anger, and prejudice. This is not the right message for our teenagers!

Teenagers are willing to discipline themselves for things they want and desire and are convinced are beneficial. Girls get up early for drill team practice. Boys train in the off-season with weights to get stronger for athletic competition. Our teens can be disciplined in their sexual lives if they have the right information to make logical choices.

Saving sex for marriage is the common sense solution. In fact, it is the only solution. We don't hesitate to tell our kids not to use drugs or marijuana, and most do not. We tell our kids it's unhealthy to smoke, and most do not.

It is normal and healthy not to have sex until marriage. STDs are so common that it is not an exaggeration to say that most people who regularly have sex outside of marriage will contract a sexually transmitted disease. Our sexuality should blossom within the confines of a mutually faithful monogamous relationship. We need to reeducate our kids not just in what is healthy, but in what is right.

# **The Epidemic of Sexually Transmitted Diseases – A Christian Solution**

Written by Dr. Ray Bohlin

*Dr. Bohlin looks at data describing the huge increase in STDs in American, considers the causes of this increase, and proposes a Christian solution firmly rooted in a biblical worldview.*

## **An STD Epidemic**

Sexually Transmitted Diseases (or STDs) are at unprecedented and epidemic proportions. Thirty years of the sexual revolution is paying an ugly dividend. While a few STDs can be transmitted apart from sex acts, all are transmissible by the exchange of bodily fluids during intimate sexual contact. I want to discuss the severity of the problem as well as what must be done if we are to save a majority of the next generation from the shame, infertility, and sometimes death, that may result from STDs.

The information I am about to share is from data gathered by the Medical Institute for Sexual Health out of Austin, Texas.(1) All of these statistics are readily available from

reputable medical and scientific journals.

Today, there are approximately 25 STDs. A few can be fatal. Many women are living in fear of what their future may hold as a result of STD infection. It is estimated that 1 in 5 Americans between the ages of 15 and 55 are currently infected with one or more STDs, and 12 million Americans are newly infected each year. That's nearly 5% of the entire population of the U.S. Of these new infections, 63% are in people less than 25 years old.

This epidemic is a recent phenomenon. Some young people have parents who may have had multiple sexual partners with relative impunity. They may conclude that they too are safe from disease. However, most of these diseases were not around 20 to 30 years ago. Prior to 1960, there were only two significant sexually transmitted diseases: syphilis and gonorrhea. Both were easily treatable with antibiotics. In the sixties and seventies this relatively stable situation began to change. For example, in 1976, chlamydia first appeared in increasing numbers in the United States. Chlamydia, particularly dangerous to women, is now the most common STD in the country. Then in 1981, human immunodeficiency virus (HIV), the virus which causes AIDS, was identified. By early 1993, between 1 and 2 million Americans were infected with AIDS, over 12 million were infected worldwide, and over 160,000 had died in the U.S. alone. Over 10% of the total U.S. population, 30 million people, are infected with herpes.

In 1985, human papilloma virus (HPV), began to increase. This virus will result in venereal warts and will often lead to deadly cancers. In 1990, penicillin resistant-strains of gonorrhea were present in all fifty states.

By 1992 syphilis was at a 40-year high. As of 1993, pelvic inflammatory disease (PID), which is almost always caused by gonorrhea or chlamydia, was affecting 1 million new women each year. This includes 16,000 to 20,000 teenagers. This

complication causes pelvic pain and infertility and is the leading cause of hospitalization for women, apart from pregnancy, during the childbearing years.

Pelvic inflammatory disease can result in scarred fallopian tubes which block the passage of a fertilized egg. The fertilized egg, therefore, cannot pass on to the uterus and the growing embryo will cause the tube to rupture. By 1990, there was a 400% increase in tubal pregnancies, most of which were caused by STDs. Even worse is the fact that 80% of those infected with an STD don't know it and will unwittingly infect their next sexual partner.

## **The Medical Facts of STDs**

Syphilis is a terrible infection. In its first stage, the infected individual may be lulled into thinking there is little wrong since the small sore will disappear in 2 to 8 weeks. The second and third stages are progressively worse and can eventually lead to brain, heart, and blood vessel damage if not diagnosed and treated. The saddest part is that syphilis is 100% curable with penicillin, yet there is now more syphilis than since the late 1940s, and it is spreading rapidly.

Chlamydia, a disease which only became common in the mid-1970s, infects 20 to 40% of some sexually active groups including teenagers. In men, chlamydia is usually less serious; with females, however, the infection can be devastating. An acute chlamydia infection in women will result in pain, fever, and damage to female organs. A silent infection can damage a woman's fallopian tubes without her ever knowing it. A single chlamydia infection can result in a 25% chance of infertility. With a second infection, the chance of infertility rises to 50%. This is double the risk of gonorrhea.

The human papilloma virus, or HPV, is an extremely common STD.

One study reported that at the University of California, Berkeley, 46% of the sexually active coeds were infected with HPV. Another study reported that 38% of the sexually active females between the ages of 13 and 21 were infected. HPV is the major cause of venereal warts; it can be an extremely difficult problem to treat and may require expensive procedures such as laser surgery.

The human papilloma virus can result in precancer or cancer of the genitalia. By causing cancer of the cervix, this virus is killing more women in this country than AIDS, or over 4,600 women in 1991. HPV can also result in painful intercourse for years after infection even though other visible signs of disease have disappeared.

And of course there is the human immunodeficiency virus, or HIV, the virus that causes AIDS. The first few cases of AIDS were only discovered in 1981; now, in the U.S. alone, there are between 1 and 2 million infected with this disease. As far as we know, all of these people will die in the next ten years. As of early 1993, 160,000 had already died.

A 1991 study at the University of Texas at Austin showed that 1 in 100 students who had blood drawn for any reason at the university health center was HIV infected. While the progress of the disease is slow for many people, all who have the virus will be infected for the rest of their life. There is no cure, and many researchers are beginning to despair of ever coming up with a cure or even a vaccine (as was eventually done with polio). In 1992, 1 in 75 men was infected with HIV and 1 in 700 women. But the number of women with AIDS is growing. In the early years of the epidemic less than 2% of the AIDS cases were women. Now the percentage is 12%.

## **Teenagers Face a Greater Risk from STDs**

Teenagers are particularly susceptible to sexually transmitted diseases or STDs. This fact is alarming since more teens are

sexually active today than ever before. An entire generation is at risk and the saddest part about it is that most of them are unaware of the dangers they face. Our teenagers must be given the correct information to help them realize that saving themselves sexually until marriage is the only way to stay healthy.

The medical reasons for teens' high susceptibility to STDs specifically relates to females. The cervix of a teenage girl has a lining which produces mucus that is a great growth medium for viruses and bacteria. As a girl reaches her 20s or has a baby, this lining is replaced with a tougher, more resistant lining. Also during the first two years of menstruation, 50% of the periods occur without ovulation. This will produce a more liquid mucus which also grows bacteria and viruses very well. A 15-year-old girl has a 1-in-8 chance of developing pelvic inflammatory disease simply by having sex, whereas a 24-year-old woman has only a 1-in-80 chance in that situation.

Teenagers do not always respond to antibiotic treatment for pelvic inflammatory disease, and occasionally such teenage girls require a hysterectomy. Teenage infertility is also an increasing problem. In 1965, only 3.6% of the married couples between ages 20 and 24 were infertile; by 1982, that figure had nearly tripled to 10.6%. The infertility rate is surely higher than that now with the alarming spread of chlamydia.

Teenagers are also more susceptible to human papilloma virus, HPV. Rates of HPV infection in teenagers can be as high as 40%, whereas in the adult population, the rate is less than 15%. Teenagers are also more likely than adults to develop precancerous growths as a result of HPV infection, and they are more likely to develop pelvic inflammatory disease.

Apart from the increased risk from STDs in teens, teenage pregnancy is also at unprecedented levels, over 1 million pregnancies, and 400,000 abortions in 1985. Abortion is not a

healthy procedure for anyone to undergo, especially a teenager. It is far better to have not gotten pregnant. Oral contraceptives are not as effective with teenagers, mainly because teens are more apt to forget to take the pill. Over a one-year period, as many as 9 to 18% of teenage girls using oral contraceptives become pregnant.

Our teenagers are at great risk. In a society that has abandoned God's design for healthy meaningful sexual expression within marriage, our children need to be told the truth about the dangers of STDs.

## **Is "Safe Sex" Really the Answer?**

I must now take a hard look at the message of "safe sex" which is being taught to teens at school and through the media across the country.

Some people believe that if teens can be taught how to use contraception and condoms effectively, that rates of pregnancy and STD infection will be reduced dramatically. But the statistics and common sense tell us otherwise. At Rutgers University, the rates of infection of students with STD varied little with the form of contraception used. For example, 35 to 44% of the sexually active students were infected with one or more STDs whether they used no contraceptive, oral contraceptive, the diaphragm, or condoms. It is significant to note that condoms, the hero of the "safe sex" message, provided virtually no protection from STDs.

Will condoms prevent HIV infection, the virus that causes AIDS? While it is better than nothing, the bottom line is that condoms cannot be trusted. A study from Florida looked at couples where one individual was HIV positive and the other was negative. They used condoms as protection during intercourse. Obviously these couples would be highly motivated to use the condoms properly, yet after 18 months, 17% of the previously uninfected partners were now HIV positive. That is

a one-in-six chance, the same as in Russian roulette. Not good odds!

Condoms do not even provide 100% protection for the purpose for which they were designed: prevention of pregnancy. One study from the School of Medicine Family Planning Clinic at the University of Pennsylvania reported that 25% of patients using condoms as birth control conceived over a one-year period. Other studies indicate that the rate of accidental pregnancy from condom-protected intercourse is around 15% with married couples and 36% for unmarried couples.

Condoms are inherently untrustworthy. The FDA allows one in 250 to be defective. Condoms are often stored and shipped at unsafe temperatures which weakens the integrity of the latex rubber causing breaks and ruptures. Condoms will break 8% of the time and slip off 7% of the time. There are just so many pitfalls in condom use that you just can't expect immature teenagers to use them properly. And even if they do, they are still at risk.

Studies are beginning to show that school-based sex education that includes condom use as the central message does not work. A study in a major pediatric journal concluded that "the available evidence indicates that there is little or no effect from school-based sex-education on sexual activity, contraception, or teenage pregnancy."(2) This study evaluated programs that emphasized condoms. Over \$3 billion dollars has been spent on sex- education programs emphasizing condoms with little or no effect! In addition, programs that emphasize condoms tend to give a false sense of security to sexually active students and make those students who are not having sex feel abnormal. Hardly the desired result!

The list of damages from unmarried adolescent sexual activity is long indeed. Apart from the threat to physical health and fertility, there is damage to family relationships, self-confidence and emotional health, spiritual health, and future

economic opportunities due to unplanned pregnancy. Condom-based sex-education does not work.

## **Saving Sex for Marriage is the Common Sense Solution.**

I have been discussing the epidemic of sexually transmitted diseases that is running rampant in this country and around the world. Diseases such as chlamydia, human papilloma virus, herpes, hepatitis B, trichomonas, pelvic inflammatory disease, and AIDS have joined syphilis and gonorrhea in just the last 30 years. There is no question that the fruits of the sexual revolution, or sexual convulsion as one author put it, have been devastating. I have also shown how our teenagers are at a greater risk for sexually transmitted diseases than are adults and that sex-education based on condom use is ineffective and misleading. There is only one message that offers health, hope, and joy to today's teenagers. We need to teach single people to save intercourse for marriage.

Sex is a wonderful gift, but if uncontrolled, it has a great capacity for evil as well as good. Our bodies were not made to have multiple sex partners. Almost all risk of STD and out of wedlock pregnancy can be avoided by saving intercourse for marriage. And it can be done.

Statistics show clearly that in schools that teach a sex education program that emphasizes saving intercourse for marriage, the teen pregnancy rate drops dramatically in as little as one year. In San Marcos, California, a high school used a federally funded program ("Teen Aid") which emphasizes saving intercourse until marriage. Before using the program there were 147 pregnancies out of 600 girls. Within two years, the number of pregnancies plummeted to 20 out of 600 girls.(3) In Jessup, Georgia, upon instituting the "Sex Respect" program, the number of pregnancies out of 340 female students dropped from 17 to 13 to 11 to 3 in successive years.

Delaying intercourse until teens are older is not a naive proposal. Over 50% of the females and 40% of the males ages 15 to 19 have not had intercourse. While not a majority, they are living proof that teens can control their sexual desires. Current condom-based sex-education programs basically teach teenagers that they cannot control their sexual desires, and that they must use condoms to protect themselves. It is not a big leap from teenagers being unable to control their sexual desires to being unable to control their hate, greed, anger, and prejudice. This is not the right message for our teenagers! Teenagers are willing to discipline themselves for things they want and desire and are convinced are beneficial. Girls get up early for drill team practice. Boys train in the off-season with weights to get stronger for athletic competition. Our teens can also be disciplined in their sexual lives if they have the right information to make logical choices. Saving sex for marriage is the common sense solution. In fact, it is the only solution. We don't hesitate to tell our kids not to use drugs, and most don't. We tell our kids it's unhealthy to smoke, and most do not. We tell our kids not to use marijuana, and most do not.

It is normal and healthy not to have sex until marriage. Sexually transmitted diseases are so common that it is not an exaggeration to say that most people who regularly have sex outside of marriage will contract a sexually transmitted disease. Not only is saving sex for marriage the only real hope for sexual health, it is God's design. God has said that our sexuality is to blossom within the confines of a mutually faithful monogamous relationship. What we are seeing today is the natural consequence of disobedience. We need to reeducate our kids not just in what is best, but in what is right.

## Loneliness

✘ The baby boom generation is headed for a crisis of loneliness. The reasons are simple: demographics and social isolation. More boomers are living alone than in previous generations, and those living with another person will still feel the nagging pangs of loneliness.

In previous centuries where extended families dominated the social landscape, a sizeable proportion of adults living alone was unthinkable. And even in this century, adults living alone have usually been found near the beginning (singles) and end (widows) of adult life. But these periods of living alone are now longer due to lifestyle choices on the front end and advances in modern medicine on the back end. Baby boomers are postponing marriage and thus extending the number of years of being single. Moreover, their parents are (and presumably they will be) living longer, thereby increasing the number of years one adult will be living alone. Yet the increase in the number of adults living alone originates from more than just changes at the beginning and end of adult life. Increasing numbers of boomers are living most or all of their adult lives alone.

In the 1950s, about one in every ten households had only one person in them. These were primarily widows. But today, due to the three D's of social statistics (death, divorce, and deferred marriage), about one in every four households is a

single person household. And if current trends continue, sociologists predict that ratio will increase to one in every three households by the twenty-first century.

In the past, gender differences have been significant in determining the number of adults living alone. For example, young single households are more likely to be men, since women marry younger. On the other hand, old single households are more likely to be women, because women live longer than men. While these trends still hold true, the gender distinctions are blurring as boomers of both sexes reject the traditional attitudes towards marriage. Compared with their parents, boomers are marrying less, marrying later, and staying married for shorter periods of time.

## **Marriage Patterns**

The most marriageable generation in history has not made the trip to the altar in the same percentage as their parents. In 1946, the parents of the baby boom set an all-time record of 2,291,000 marriages. This record was not broken during the late 1960s and early 1970s, when millions of boomers entered the marriage-prone years. Finally, in 1979, the record that had lasted 33 years was finally broken when the children of the baby boom made 2,317,000 marriages.

Instead of marrying, many boomers chose merely to “live together.” When this generation entered the traditional years of marriageability, the number of unmarried couples living together in the United States doubled in just ten years to well over a million. The sharpest change was among cohabiting couples under 25, who increased ninefold after 1970. Demographers estimate that there have been as many as one-and-a-half to two million cohabiting couples in the U.S. Yet even high figures underestimate the lifestyle changes of boomers. These figures merely represent the number of couples living together at any one time. Cohabitation is a fluid state, so the total number living together or living alone is in the

millions.

Not only is this generation marrying less; they are also marrying later. Until the baby boom generation arrived on the scene, the median age of marriage remained stable. But since the mid-fifties, the median age of first marriage has been edging up. Now both "men and women are marrying a full eighteen months later than their counterparts a generation earlier."

Another reason for a crisis in loneliness is marital stability. Not only is this generation marrying less and marrying later; they also stay married less than their parents. The baby boom generation has the highest divorce rate of any generation in history. But this is only part of the statistical picture. Not only do they divorce more often; they divorce earlier. When the divorce rate shot up in the sixties and seventies, the increase did not come from empty nesters finally filing for divorce after sending their children into the world. Instead, it came from young couples divorcing before they even had children. Demographer Tobert Michael of Stanford calculated that while men and women in their twenties comprised only about 20 percent of the population, they contributed 60 percent of the growth in the divorce rate in the sixties and early seventies.

Taken together, these statistics point to a coming crisis of loneliness for the boom generation. More and more middle-aged adults will find themselves living alone. Thomas Exter, writing in *American Demographics*, predicts that

*The most dramatic growth in single-person households should occur among those aged 45 to 64, as baby boomers become middle-aged.*

These households are expected to increase by 42 percent, and it appears the number of men living alone is growing faster than the number of women.

The crisis of loneliness will affect more than just the increasing number of baby boomers living alone. While the increase in adults living alone is staggering and unprecedented, these numbers are fractional compared with the number of baby boomers in relationships that leave them feeling very much alone.

The “C” word (as it was often called in the 80s) is a significant issue. Commitment is a foreign concept to most of the million-plus cohabiting couples. These fluid and highly mobile situations form more often out of convenience and demonstrate little of the commitment necessary to make a relationship work. These relationships are transitory and form and dissolve with alarming frequency. Anyone looking for intimacy and commitment will not find them in these relationships.

Commitment is also a problem in marriages. Spawned in the streams of sexual freedom and multiple lifestyle options, boomers may be less committed to making marriage work than previous generations. Marriages, which are supposed to be the source of stability and intimacy, often produce uncertainty and isolation.

## **Living-Together Loneliness**

Psychologist and best-selling author Dan Kiley has coined the term “living-together loneliness,” or LTL, to describe this phenomenon. He has estimated that 10 to 20 million people (primarily women) suffer from “living together loneliness.”

LTL is an affliction of the individual, not the relationship, though that may be troubled too. Instead, Dan Kiley believes LTL has more to do with two issues: the changing roles of men and women and the crisis of expectations. In the last few decades, especially following the rise of the modern feminist movement, expectations that men have of women and that women have of men have been significantly altered. When these

expectations do not match reality, disappointment (and eventually loneliness) sets in. Dan Kiley first noted this phenomenon among his female patients in 1970. He began to realize that loneliness comes in two varieties. The first is the loneliness felt by single, shy people who have no friends. The second is more elusive because it involves the person in a relationship who nevertheless feels isolated and very much alone.

According to Kiley, "There is nothing in any diagnostic or statistical manual about this. I found out about it by listening to people." He has discovered that some men have similar feelings, but most tend to be women. The typical LTL sufferer is a woman between the ages of 33 and 46, married and living a comfortable life. She may have children. She blames her husband or live-in partner for her loneliness. Often he's critical, demanding, uncommunicative. The typical LTL woman realizes she is becoming obsessed with her bitterness and is often in counseling for depression or anxiety. She is frequently isolated and feels some estrangement from other people, even close friends. Sometimes she will have a fantasy about her partner dying, believing that her loneliness will end if that man is out of her life.

To determine if a woman is a victim of LTL, Kiley employs a variation of an "uncoupled loneliness" scale devised by researchers at the University of California at Los Angeles. For example, an LTL woman would agree with the following propositions: (1) I can't turn to him when I feel bad, (2) I feel left out of his life, (3) I feel isolated from him, even when he's in the same room, (4) I am unhappy being shut off from him, (5) No one really knows me well.

Kiley also documents five identifiable stages of LTL which are likely to affect baby boom women. A typical LTL woman who marries at about age 22 will feel bewildered until she is 28. At that point, isolation sets in. At 34, she begins to feel agitated. This turns to depression between the ages of 43 and

50. After that, a woman faces absolute exhaustion.

Women may soon find that loneliness has become a part of their lives whether they are living alone or "in a relationship," because loneliness is more a state of mind than it is a social situation. People who find themselves trapped in a relationship may be more lonely than a person living alone. The fundamental issue is whether they reach out and develop strong relationship bonds.

## Male Loneliness

In recent years, social psychologists have expressed concern about the friendless male. Many studies have concluded that women have better relational skills which help them to be more successful at making and keeping friends. Women, for example, are more likely than men to express their emotions and display empathy and compassion in response to the emotions of others. Men, on the other hand, are frequently more isolated and competitive and therefore have fewer (if any) close friends.

Men, in fact, may not even be conscious of their loneliness and isolation. In his book *The Hazards of Being Male: The Myth of Masculine Privilege*, Herb Goldberg asked adult men if they had any close friends. Most of them seemed surprised by the question and usually responded, "No, why? Should I?"

David Smith lists in his book *Men Without Friends* the following six characteristics of men which prove to be barriers to friendship. First, men show an aversion to showing emotions. Expressing feelings is generally taboo for males. At a young age, boys receive the cultural message that they are to be strong and stoic. As men, they shun emotions. Such an aversion makes deep relationships difficult, thus men find it difficult to make and keep friendships.

Second, men seemingly have an inherent inability to fellowship. In fact, men find it hard to accept the fact that

they need fellowship. If someone suggests lunch, it is often followed by the response, "Sure, what's up?" Men may get together for business, sports, or recreation (hunting and fishing), but they rarely do so just to enjoy each other's company. Centering a meeting around an activity is not bad, it is just that the conversation often never moves beyond work or sports to deeper levels.

Third, men have inadequate role models. The male macho image prevents strong friendships since a mask of aggressiveness and strength keeps men from knowing themselves and others. A fourth barrier is male competition. Men are inordinately competitive. Men feel they must excel in what they do. Yet this competitive spirit is frequently a barrier to friendship.

Fifth is an inability to ask for help. Men rarely ask for help because they perceive it as a sign of weakness. Others simply don't want to burden their family or colleagues with their problems. In the end, male attempts at self-sufficiency rob them of fulfilling relationships.

A final barrier is incorrect priorities. Men often have a distorted order of priorities in which physical things are more important than relationships. Success and status is determined by material wealth rather than by the number of close friends.

Men tend to limit their friendships and thus their own identity. H. Norman Wright warns:

*The more a man centers his identity in just one phase of his life—such as vocation, family, or career—the more vulnerable he is to threats against his identity and the more prone he is to experience a personal crisis. A man who has limited sources of identity is potentially the most fragile. Men need to broaden their basis for identity. They need to see themselves in several roles rather than just a teacher, just a salesman, just a handsome, strong male, just a husband.*

# Crowded Loneliness

Loneliness, it turns out, is not just a problem of the individual. Loneliness is endemic to our modern, urban society. In rural communities, although the farm houses are far apart, community is usually very strong. Yet in our urban and suburban communities today, people are physically very close to each other but emotionally very distant from each other. Close proximity does not translate into close community.

Dr. Roberta Hestenes at Eastern College has referred to this as “crowded loneliness.” She says:

*Today we are seeing the breakdown of natural “community” network groups in neighborhoods like relatives, PTA, etc. At the same time, we have relationships with so many people. Twenty percent of the American population moves each year. If they think they are moving, they won’t put down roots. People don’t know how to reach out and touch people. This combination produces crowded loneliness.*

Another reason for social isolation is the American desire for privacy. Though many boomers desire community and long for a greater intimacy with other members of their generation, they will choose privacy even if it means a nagging loneliness. Ralph Keyes, in his book *We the Lonely People*, says that above all else Americans value mobility, privacy, and convenience. These three values make developing a sense of community almost impossible. In his book *A Nation of Strangers*, Vance Packard argued that the mobility of American society contributed to social isolation and loneliness. He described five forms of uprooting that were creating greater distances between people.

First is the uprooting of people who move again and again. An old Carole King song asked the question, “Doesn’t anybody stay in one place any more?” At the time when Packard wrote the

book, he estimated that the average American would move about 14 times in his lifetime. By contrast, he estimated that the average Japanese would move five times.

The second is the uprooting that occurs when communities undergo upheaval. The accelerated population growth during the baby boom along with urban renewal and flight to the suburbs have been disruptive to previously stable communities.

Third, there is the uprooting from housing changes within communities. The proliferation of multiple-dwelling units in urban areas crowd people together who frequently live side by side in anonymity.

Fourth is the increasing isolation due to work schedules. When continuous-operation plants and offices dominate an area's economy, neighbors remain strangers.

And fifth, there is the accelerating fragmentation of the family. The steady rise in the number of broken families and the segmentation of the older population from the younger heightens social isolation. In a very real sense, a crisis in relationships precipitates a crisis in loneliness.

Taken together, these various aspects of loneliness paint a chilling picture of the 1990s. But they also present a strategic opportunity for the church. Loneliness will be on the increase in this decade, and Christians have an opportunity to minister to people cut off from normal, healthy relationships.

The local church should provide opportunities for outreach and fellowship in their communities. Individual Christians must reach out to lonely people and become their friends. And ultimately we must help a lost, lonely world realize that their best friend of all is Jesus Christ.

---

# Time and Busyness

It has, perhaps, always been true that "time is money." But for the current generation, this maxim has a new twist. In the frenetic 90s, time has become even more scarce than money and therefore more valuable. As with any commodity, the law of supply and demand determines value. In the last two decades, free time has grown scarce and hence has become a valuable possession.

The 1990s is the decade of the time famine. Leisure time, once plentiful and elastic, is now scarce and elusive. People seeking the good life are finding it increasingly difficult to enjoy it, even if they can afford it. What money was in the 1980s, time has become in the 1990s.

According to a Lou Harris survey, the amount of leisure time enjoyed by the average American has shrunk 37 percent since 1973. A major reason is an expanding workweek. Over this same period, the average workweek (including commuting) has increased from fewer than 41 hours to nearly 47 hours. And in many professions, such as medicine, law, and accounting, an 80-hour week is not uncommon. Harris therefore concludes that "time may have become the most precious commodity in the land."

## The Technology of Time

Our current time crunch has caught most people off-guard. Optimistic futurists in the 1950s and 60s, with visions of utopia dancing in their heads, predicted Americans would enjoy ample hours of leisure by the turn of the century. Computers, satellites, and robotics would remove the menial aspects of labor and deliver abundant opportunities for rest and

recreation.

The optimists were partly right: computers crunch data at unimaginable speeds, orbiting satellites cover the globe with a dizzying array of messages, and robots zap together everything from cars to computer chips at speeds far exceeding their human counterparts. Yet these and other technological feats have not freed Americans from their labors. Most people are busier than ever.

It wasn't supposed to be this way. Testimony before a Senate subcommittee in 1967 predicted that "by 1985, people could be working just 22 hours a week or 27 weeks a year or could retire at 38." The major challenge facing people in the 1990s should have been what to do with all the leisure time provided by our technological wizardry.

Instead, technology has been more of an enemy than an ally. "Technology is increasing the heartbeat," says Manhattan architect James Trunzo, who designs automated environments. "We are inundated with information. The mind can't handle it all. The pace is so fast now, I sometimes feel like a gunfighter dodging bullets."

Actually, the problem isn't so much technology as it is the heightened expectations engendered by it. The increased speed and efficiency of appliances, computers, and other machines have enabled us to accomplish much more than was possible in previous decades. But this efficiency has also fostered a desire to take on additional responsibilities and thereby squeeze even more activities into already crammed calendars.

As the pace of our lives has increased, over-commitment and busyness have been elevated to socially desirable standards. Being busy is chic and trendy. Pity the poor person who has an organized life and a livable schedule. Everyone, it seems, is running out of time.

## **Time-Controlling Devices**

It is little wonder that most of the products now being developed are not so much time-savers as they are time-controllers. Most of the appliances developed in the 1950s—vacuum cleaners, dishwashers, mixers—were designed to save time and remove drudgery from housework. By comparison, most of the products developed in the 1980s—VCRs, answering machines, automatic tellers—were time-controllers. These devices do not save much time, but they do allow harried consumers to use their time more effectively.

Technological efficiency has also increased competition. Labor-saving devices that are supposed to make life easier frequently force people to work harder. Baby boomers who are intensely competing with one another for jobs and prestigious promotions avidly employ the latest equipment to give them an edge. Faxes, LANs, car phones, and laptop computers are viewed as necessities if one is to remain competitive.

But technology isn't enough. So most professionals, especially those in service industries such as law, accounting, and advertising, work long hours in an effort to meet their clients' seemingly endless needs and demands. Other baby boomers feel trapped in the same rat race because economic pressures make it nearly impossible to support a family on one income.

The work ethic seems out of control. In the frenetic dash for success or just plain survival, leisure time becomes a scarce commodity. "My wife and I were sitting on the beach in Anguilla on one of our rare vacations," recalls architect James Trunzo, "and even there my staff was able to reach me. There are times when our lives are clearly leading us."

## **No Time to Talk**

Everywhere, it seems, people are over-scheduled and over-

committed. Workers are weary. Parents are preoccupied. And children and family relationships are often neglected.

A recent survey by Cynthia Langham at the University of Detroit found that parents and children spend only 14.5 minutes per day talking to each other. That is less time than a football quarter and certainly much less time than most people spend commuting to work.

She says that many people are shocked to hear the 14.5-minute statistic. But once they take a stopwatch to their conversations, they realize she is right.

But that 14.5-minute statistic is misleading, since most of that time is squandered on chitchat like "What's for supper?" and "Have you finished your homework?" Truly meaningful communication between parent and child unfortunately occupies only about two minutes each day. Langham concludes, "Nothing indicates that parent-child communications are improving. If things are changing, it's for the worse."

She points to two major reasons for this communication breakdown. First is a change in the workforce. A few decades ago the dinner table was a forum for family business and communication. But now, when dinner-time rolls around, Dad is still at work, Mom is headed for a business meeting, and sister has to eat and run to make it to her part-time job. Even when everyone is home, there are constant interruptions to meaningful communication.

The second reason for poor parent-child communication is the greatest interruption of all: television. Urie Bronfenbrenner of Cornell has reported a forty-year decline in the amount of time children spend with their parents, and much of the recent loss is due to television. TV sabotages much of the already-limited time families spend together. Meals are frequently eaten in front of the "electronic fireplace." After dinner, talk-starved families gather to watch congenial television

families with good communication skills, like the Huxtables on the Cosby show.

While some television shows deal with issues families might discuss (drugs, pregnancy, honesty), few families take advantage of these opportunities to talk about the dilemmas portrayed on the programs and provide moral instruction.

The greeting card business has developed a whole new product line for busy parents and children. More and more children are finding cards in their backpacks or under their pillows that proclaim, "Have a good day at school," or lament, "I wish I were there to tuck you in."

The effect of time pressures on the family has been devastating. Yale psychology professor Edward Ziglar somberly warns that "as a society, we're at the breaking point as far as family is concerned."

Homemaking and child-rearing are full-time activities. When both husband and wife work, maintaining a home and raising a family becomes difficult. In the increasing numbers of single-parent households, the task becomes next to impossible.

Someone has to drive car pools, make lunches, do laundry, cope with sick kids and broken appliances, and pay the bills. In progressive homes, household tasks are shared as the traditional husband/wife division of labor breaks down. In others, super-Mom is expected to step into the gap and perform flawlessly.

Inevitably, children are forced to grow up quickly and take on responsibilities they should never have to shoulder. Some children are effectively abandoned—if not physically, at least emotionally—and must grow up on their own. Others are latch-key kids who are forced to mature emotionally beyond their years. These demands take their toll and create what sociologist David Elkind has called the "hurried child" syndrome.

Time, or rather our lack of it, is severely hurting families. Nurturing suffers when families do not have time to communicate and parents do not have time to instruct their children. In the end, the lack of time takes its toll on the stability of our families.

## **Never Enough Time**

A 1989 survey done by *Family Circle* documented the loss of time in families, especially for working mothers. The article, entitled "Never Enough Time?" began: "Remember 'quality time'? In the 1980's that was what you sandwiched in for the children between the office and the housework. We all learned how valuable time was in the school of hard knocks. Life was what happened while we were busy making other plans, to paraphrase ex-Beatle John Lennon." That was then.

A resounding 71 percent of those surveyed said their lives had gotten busier in the previous year. Nearly a third attributed this increase in busyness to expanding work loads at the office, the demands of a new job, or the pressures of starting a business or returning to work. Not only were the women working longer hours, but many were also working on weekends, and nearly a third often took work home.

Dual-income couples reported major difficulties finding time for each other. Negotiating schedules and calendar-juggling were daily activities. Three out of four women in the survey reported that finding enough time to be alone with their husbands was "often" or "sometimes" a major stress in their relationships. When asked, "In a time crunch, who gets put on the back burner?" half said friends, then husbands, and then other family members.

Those hit hardest by time pressures were single parents. One single mother with two teenagers in Illinois wrote: "I am responsible for a house and yard, work 40 hours a week, take college classes, run a local support group for divorced and

widowed women and am involved with a retreat group through church. I have time because I *make* time.”

Often the first thing women will let slide is housekeeping. A full 82 percent said they had changed their standards of cleaning and organizing a house. When asked why, 49 percent said other things are more important, 42 percent said they were more relaxed about letting chores wait, 35 percent said they had one or more young children, and 23 percent said they had taken a paying job.

Organization expert Stephanie Winston says that the young generation of working women has reframed expectations about household responsibilities. She says, “Their sense of what is expected of them is really very different from what was expected 10 years ago, when women joining the work force had been raised on the old model—rearing the family, cooking, cleaning and the proverbial white-glove test.” But whether they were in the work force or full-time homemakers, more than half of the women surveyed were either “very” or “somewhat” dissatisfied with the amount of time they have alone. Only 30 percent try to set aside four or more hours a week just for themselves. Another 30 percent carve out two to three hours. But 19 percent say they give themselves an hour or less a week, and 20 percent do not allot themselves any leisure time at all.

The time pressure on women and families is significant. The time crunch is squeezing out meaningful communication and important time to think and reflect. The additional time will not come without changes in our lifestyles.

## **Redeeming the Time**

Time, or the lack of it, will continue to dominate our thinking through the 1990s. All of us are in the midst of a time crunch—the solution is to recognize our priorities and apply them rigorously to our lives.

First, we must establish biblical priorities in our lives. Often our busyness is merely a symptom of a deeper problem, such as materialism. In Luke 12, Jesus illustrated this danger with the parable of the rich fool. He says, "The land of a certain rich man was very productive. And he began reasoning to himself, saying, 'What shall I do, since I have no place to store my crops?' And he said, 'This is what I will do: I will tear down my barns and build larger ones, and there I will store all my grain and my goods. And I will say to my soul, "Soul, you have many goods, laid up for many years to come; take your ease, eat, drink and be merry."'" But God said to him, 'You fool! This very night your soul is required of you; and now who will own what you have prepared?'"

There are a number of applications we can derive from this passage. First, we should make sure that we are not so involved in the affairs of the world that we neglect the affairs of the spirit. To turn the familiar adage around, we can be so earthly-minded we are no heavenly good.

Second, we should ask ourselves if we are tearing down productive resources for a more luxurious lifestyle. If a three-bedroom house is sufficient, are we selling it merely to move up to a four- bedroom house? If the car we are currently driving is fine, are we nevertheless eager to trade it in on a newer or more expensive model? Often our indulgences constrain our time and financial resources.

This observation leads to our second biblical principle: fight materialism in our lives. Proverbs 28:20 says "He who makes haste to be rich will not go unpunished." Materialism brings with it a haste to get rich. Materialistic people are not patient people. They want what they want, when they want it, and they want it now.

Often our lack of time is tied to our haste to get rich, to feed our greed. We need to ask ourselves the fundamental question, How much do we really need? If we fight materialism

in our lives and cut back on the lavishness of our lifestyle, we might be surprised how much time we will free up.

A third biblical principle is to redeem the time. Ephesians 5:15-16 says “Therefore be careful how you walk, not as unwise men, but as wise, making the most of your time, because the days are evil.” Colossians 4:5 says, “Conduct yourselves with wisdom toward outsiders, redeeming the time.”

Unlike many of the other resources God has given us, time is not renewable. We may lose money, but we can always earn more. We may lose our possessions, but we can always acquire new ones. But time is a non-renewable commodity. If we squander our time, it is lost forever.

All of us, but especially Christians, must carefully manage the time that God has given us. It is a valuable resource, and we can either spend it on ourselves or redeem it as a spiritual investment. We can spend it only once, and how we spend it can have eternal consequences. Let us not waste the resources God has given us. Instead, let us redeem the time and use it for God’s glory.

## **Anxious for Nothing (magazine article)**

*This article is also available in [Spanish](#).*

***“Death is the only joy, and the only release.”***

***“Contrary to popular belief, there is no hope.”***

What gloomy thoughts. The first came from the classified section of a college newspaper, the second from an anonymous inscription on a classroom blackboard. Both exhibit what psychologists call “existential anxiety”—frustration with a meaningless existence.

I was plagued by similar anxiety as a college freshman until some friends exposed me to the claims of Jesus Christ as found in the Bible. After accepting Him as Savior and Lord, I found that He freed me from slavery to anxiety. As a psychology major, I was fascinated, first to observe that many serious psychological disorders stem from smaller problems, and in turn to watch Jesus deal with these problems in my life.

Let’s consider two definitions and then examine four main causes of anxiety.

“Anxiety” represents a state of emotional turmoil characterized by fearfulness and apprehension.<sup>{1}</sup> It is not external stress, but an internal reaction to strenuous circumstances.<sup>{2}</sup> A “Christian” is an individual who has recognized his lack of fellowship with God and placed his complete trust in Jesus Christ as the only means of restoring that relationship.

Four causes of anxiety are guilt, fear, lack of interpersonal involvement and lack of meaning in life.

## **Guilt**

Failure to achieve standards (internally or externally imposed) often results in guilt feelings. Often psychologists attribute these feelings to problems in the past or to following legalistic moral codes. Many persons do have these problems, but a more plausible explanation for guilt feelings is that a person has them because he is guilty. If this is true, then therapy for a person experiencing guilt feelings would include admitting his guilt. This, however, can be

rather difficult.

O. H. Mowrer, a psychologist at the University of Illinois, points out the dilemma:

*Here, too, we encounter difficulty, because human beings do not change radically until first they acknowledge their sins, but it is hard for one to make such an acknowledgement unless he has "already changed." In other words, the full realization of deep worthlessness is a severe ego "insult," and one must have a new source of strength to endure it.*<sup>{3}</sup>

Jesus provides the strength needed to endure it. We must come to Him, admitting our sin and worthlessness, but the moment we accept Him as Savior, God forgives all our sins past, present and future. The Bible says that "He (Jesus) personally carried the load of our sins in His own body when He died on the cross . . . "<sup>{4}</sup>and ". . . paid the ransom to forgive our sins and set us free....<sup>{5}</sup> Each year we spend thousands of dollars in the hope that psychology and psychiatrists will solve our guilt problems. Yet the complete forgiveness–freedom from guilt–Jesus offers is free of charge.

## **Fear**

Let's consider two types of fear: of death and of circumstances. Fear of death is perhaps man's greatest fear. When I was a sophomore in college, the student rooming next to me was struck by lightning and killed. His death shocked the men in my house, and they began to consider seriously the implications of death. Anxiety struck.

The person who accepts Christ as his Savior has no problem with death. The moment he receives Christ, his eternal relationship with God begins. The apostle John writes to Christians, ". . . God has given us eternal life, and this

life is in His Son. He who has the Son has the life. . .{6}  
For the Christian, death loses its terror.

Fear of circumstances can also produce anxiety. Daily anxieties common to all of us include fear of inadequate finances, of social inadequacy, and fear for our personal safety and health.

All of these fears tend to occupy our minds and to keep us from enjoying the privilege of being alive. Enough worry and we soon find ourselves merely existing. But can we really be secure?

Financial security is tenuous, injury and danger are as near as the car whizzing by on the highway, and we can never be certain that everyone likes the way we act.

One summer I drove from Washington, D. C., to California with four girls. After that experience, I know the meaning of fear. Facing this responsibility, I became somewhat apprehensive. What would I do if a car broke down or one of the girls got sick? What if we had an accident? Also, the girls expected me to make all the decisions for the group.

At times, I became fearful, until I remembered what Jesus told His disciples: "Men, don't worry about what you are going to eat or drink or wear. Your Father in heaven loves you and knows what you need. Seek first His kingdom and His righteousness, and all these things shall be added to you."{7}  
And it works.

## **Lack Of Involvement**

William Glasser, a medical doctor, writes in his book, *Reality Therapy*, that every man experiences two basic needs—the need to feel a sense of worth to himself and to others, and the need to love and to be loved. He says that the best way to satisfy these needs is to develop a close friendship with another person who will accept him as he is, but who will also

honestly tell him when he acts irresponsibly.

Interpersonal relationships are important, but people are only human and do let us down and err in judgment. Wouldn't the ultimate therapy be to become involved with our creator? He is faithful and righteous,[{8}](#) never lets us down, and always has the best advice. Because He loves us, the Christian experiences freedom to love others.[{9}](#) We are worth much to Him: "God demonstrates His own love toward us, in that while we were yet sinners Christ died for us."[{10}](#) A person forgiven values himself, because he is "a new creature."[{11}](#) He is secure in Christ. The apostle Paul writes: "I am convinced that neither death, nor life, nor angels, nor principalities, nor things present, nor things to come, nor powers, nor height, nor depth, nor any other created thing shall be able to separate us from the love of God, which is in Christ Jesus our Lord,[{12}](#)

## **Lack Of Meaning**

Another doctor conducted studies of 31,000 Allied soldiers who were imprisoned in Japan and Korea during the 1940's. He found that, although sufficient food was offered to them, more than 8,000 died.[{13}](#) He diagnosed the cause of many deaths as "despair."

Contrast this situation to that of thousands of Christians who have spent years in prison for their faith in Christ, only to be released to continue sharing God's love, especially to those who persecuted them.

The Savior's love sustains them and motivates them as "ambassadors for Christ."[{14}](#) What greater purpose could there be than serving as an ambassador for the King of kings?

## **A Common Question**

Frequently it is suggested that Christianity could be merely a

psychological “trick” or gimmick. After all, the reasoning goes, if someone thinks that the Bible is God’s Word, couldn’t he convince himself that what it says sounds true, and that through following the Bible he has found a groovy lifestyle?

After doing some research, I must conclude that Christianity could not be an illusion. There are three reasons for this.

The first concerns the object of the Christian’s faith—Jesus Christ. The evidence for His deity, His resurrection, the prophecies He fulfilled and the lives He has changed present an overwhelming case for the validity of His claims. Because the object of my faith is valid, I believe faith in that object to be valid as well.

The second reason has to do with the nature of human personality, which is composed of intellect, emotion and will. Psychologists feel that our will does not have complete control over our emotions.[\[15\]](#) Nor does it seem likely that our intellect can completely control them. Yet some like those who have been imprisoned find it possible to love those who tortured them. Such behavior seems impossible, apart from supernatural intervention.

The third reason concerns the book that presents Christ’s answers to our problems—psychological and otherwise. The Bible, although written over a period of 1,500 years, in three languages and by 40 different authors (most of whom never met), has proved itself to be thematically coherent, internally consistent and historically accurate. Completed more than 1,800 years ago, it contains the cure for the psychological problems experienced by countless thousands of people today. The Bible is a supernatural book!

As a college student, I was curious to see what a professional psychologist would think of these views. Having written a term paper for my abnormal psychology course investigating how Jesus treats anxiety (this article contains some thoughts from

that research), I sent a copy of my paper to the author of our textbook.

In his reply, he expressed an interest in the content. Several months later, I visited him personally, and he told me that he would like to have a personal relationship with Christ. After I shared with him the claims of Christ as contained in the "Four Spiritual Laws," he prayed inviting Jesus Christ to come into his life. The latest edition of his text includes a short statement about the fact that many people today are finding psychological help through Christ.

Men everywhere are searching for freedom from fear and guilt. They need to know that God loves them. If you have never asked Christ to be your personal Lord and Savior, I encourage you to do so today. If you have, tell others how they can know Him.

He frees us to "be anxious for nothing, but in everything by prayer and supplication with thanksgiving let your requests be made known to God. And the peace of God, which surpasses all comprehension, shall guard your hearts and minds in Christ Jesus"[{16}](#)
