Are You a Marcion (Martian) Christian?

James Detrich explores the wrong thinking many Christians hold concerning an incorrect split between the Old and New Testaments, as if there were different deities for each.

Marcion or Martian?

Are you a Marcion Christian? No, I don't mean Martian as in the space aliens. No, no, this will not be an article about whether there are alien life forms on other planets. We cover that question on the Probe website. This is, instead, about Marcion, an early churchman who lived in the second century.

As the early church was trying to understand how the Old Testament and New Testament worked together, Marcion said that they are incompatible. He rejected the Old Testament as being too Jewish, too concerned with things like the Law, and sacrifices, and old timey prophets. He claimed the Christian church should have nothing to do with the Old Testament, that we are merely New Testament believers. Actually, now that I think about it, it is pretty neat that his name, Marcion, sounds like Martian as in the aliens. Because that is exactly what the early church thought of Marcion's ideas; they thought they were alien to the faith that had been passed down from Jesus and his apostles. Because the ideas were alien—or might we say, heretical—the earliest Christians rejected them and kicked Marcion and his followers out of the church.

The earliest Christians set up boundaries for right thinking, for right praise, what we call "orthodoxy" today.{1} They

declared that it was wrong to believe that the Old Testament was outdated and not essential to the faith, because they understood something very important: how one views Scripture very much depends upon how one views God. The two go hand-in-hand. If you reject Scripture, whether it is the Old or New Testament, then you will reject the God behind the book. Why? Because the Bible reveals God; it is the complete revelation of who He is and what He values.

The reason Marcion wanted to do away with the Old Testament was his wrong belief that the God of the Old Testament was an inferior god, who was full of wrath and justice. He was that nasty god who told the Israelites to execute anyone who worshipped another god. He was insecure, jealous, always wanting love and affection. But the God of the New Testament, taught Marcion, was completely the opposite: He, unlike that malicious Old Testament god, was loving, gracious, peaceful, and infinitely good. This was the true God revealed through Jesus Christ when he came to earth with the good news.{2}

So, Marcion didn't just have two Bibles, he also had two gods. On the bad side were the Old Testament and the god the older book revealed; on the good side were the New Testament and the true God the new book revealed. Was Marcion right? Should we as Christians throw out the Old Testament? Is the Old Testament God worthy of our worship? Or is Marcion's view as alien as a Martian living on planet Earth?

The Two-God Dualism

I settled in my overstuffed chair waiting for the contentious TV interview. The atheist Richard Dawkins was going to be on one of the conservative news shows. I thought to myself, this should be good. Dawkins, of course, is not your usual atheist. His rhetoric is a bit terse and brusque. He was the one who called God a "vindictive, bloodthirsty ethnic cleanser . . . capriciously malevolent bully," among other things.{3} Safe to

say, he is not too thrilled with God. But he was going to be interviewed by a fairly conservative, Catholic talk-show host, and so I figured it should be a good debate on religion. But it wasn't. It was—how to say this nicely—completely and utterly awful. When confronted by Dawkins' usual claims that the Old Testament God is a bully because he ordered the stoning of anyone who did not worship him, the bombastic interviewer basically said that the Old Testament was a bunch of myths that no one really took seriously. He soothed Dawkins' objections with the explanation that the stories in the Old Testament were allegories—they were not historically true. He went on to affirm that if Dawkins had a problem with God, he needed to read the New Testament. It is there where Jesus preaches the good news of faith, hope, and love. These are virtues that are good for society. I'm sure he thought, Dawkins can't possibly argue against this. Every time Dawkins attempted to move the conversation back to the Old Testament, where he thought his argument was the strongest, the interviewer kept the discussion on the New Testament. "How can you have a problem with a God who teaches love?" the host would ask.{4}

But it was dualism all over again; the interviewer was claiming that the Old Testament God was bad and the stories were myths, and the New Testament God is the good, Christian God. Basically, the interviewer affirmed the same things that Marcion affirmed in the second century. It was the old Marcion line that said, "If you want to know what Christianity is all about, read the New Testament; don't read the Old Testament."

Well, it worked. The talk-show host got through the interview unscathed. But at what price? I submit that the price is losing Christianity itself. Because Christianity is not based upon merely the New Testament. We don't have two gods; we have one God. We have one God that is revealed in both the Old and New Testament. It is one book about one God.

But if this is true, then what does the Old Testament

contribute to our understanding of God? How do the Old Testament and the New work together? These are some of the questions that we as the body of Christ need to prayerfully think over, and in the next sections I will attempt to provide some answers.

One Book, One Story

We have been discussing the unfortunate practice of separating the Old Testament from the New. This was first done in the second century by Marcion who not only viewed the Old Testament as inferior to the New, but taught that the god of the Old Testament was inferior to the true God of the New Testament. But we need to understand that this was not only a problem in the second century, it is also a tendency in the church today. It is a rare church that preaches the Old Testament as often as the New. Bible studies are typically journeys through New Testament books. When discussing God with our friends, especially our lost friends, we often emphasize what the New Testament says about Jesus and, at times, can feel embarrassed about the demands in the Old Testament. We love to exclaim the grace of God; we don't equally love the judgment, jealousy, and wrathfulness of God that the Old Testament also presents.

Please, don't get me wrong, I am not saying that we should not preach a grace-filled God. I attend a seminary that has a strong tradition of preaching unapologetically the grace of God. But what I am saying is that our view of God must be imbibed from the totality of Scripture, including the Old Testament. This is the great benefit of preaching, teaching, and meditating upon the older book; it provides us with a more complete revelation of God. These two testaments are not contrary to one another; they do not set up two different gods or two different or competing views of God. They are, rather, complementary. They disclose one God who is eternal, infinitely good, and infinitely jealous of his creatures'

worship with a holy jealousy borne out of love, because He made us for Himself.

Not only do they reveal one God, but they are also one book, one story. Think for a moment about the nature of story. For a story to work, there must be a conflict. At times, there will be numerous sub-conflicts, but there is always at least one big, overriding conflict that gives the narrative meaning and purpose. The other thing about storytelling is that you are either building toward the resolution of the conflict or you are falling in action because the conflict has already been resolved. Therefore, stories are not straight lines of action; they follow a building | climax | falling structure. The Bible is no different. As a story itself it follows the same structure. From Genesis to Revelation, Holy Scripture tells one story about a conflict that has to be resolved. The action rises as the conflict increases, and after the conflict is resolved, the action then falls. This makes the Old Testament just as important as the New; they may be two testaments, but they are one unified story.

The Big Story of the Bible

Having completely rejected Marcion's view of the Old Testament and seeing it as valuable to be read and taught, we moved forward to examine how the Old Testament and the New work together. We affirmed that both testaments tell one unified story. So, how is this done? At the center of the biblical story is conflict—the clash between God and sin. The question throughout the entire story is, How can a holy, righteous God still have fellowship and communion with His creation given the fact that sin has now been introduced into the creative order? Genesis 1-11 provides the background to the story. Those chapters are like the black screen that comes up at the beginning of a movie like *Star Wars*, providing the backstory so the audience can understand the setting and characters, and where the story is going. Those background chapters in Genesis

tell us about God's creation and the fall of that creation, and then provide details of the extent of the fall demonstrating through the stories of Noah and Babel that man really is sinful and we need redemption.

But the biblical story really gets going in Genesis chapter 12. It is there that God establishes a covenant with Abraham to provide redemption for humanity. This is not to say that God was not at work before Abraham. He was. But not in a programmatic, systematic manner. Now God comes to mankind; He comes to Abraham to begin a new people to establish His reputation in order to bring all humanity to redemption. He works with Abraham, and then Isaac, and then Jacob, and then all of Jacob's sons. Carefully, God works His divine plan in spite of the willful disobedience and, at times, just sheer stupidity of these men and their respective families.

As Exodus opens, this new nation is enslaved and the plan of God appears to be in jeopardy. But through the miracles of the plagues, God brings His people out of slavery. He brings them to Mount Sinai and gives them the Law which is a revelation of who He is and what He expects. If this new nation is to establish the reputation of the one true God, then they must be holy and pure. That is the reason why the Old Testament demands and commands, even with the consequence of death, that the people only worship God and Him alone. He is jealous, like a husband who demands his wife only have one lover—himself. Since God is the only source of life and goodness, He knows that loving and worshiping any false gods leads to disaster and death. All of this, though, is the building of the plot—the increase of the conflict—because God's workings with Israel never provided a full and complete answer to sin. That full and complete answer was yet to come.

The Point of It All: Jesus

In this article we have been discussing the value of the Old

Testament. We have rejected Marcion's view that the Old Testament god is different from and inferior to the New Testament God. And we have explored how the Old and New Testaments work together to tell one unified story. In providing the details of how God worked with the children of Israel, all the way from Genesis to the prophets, the Old Testament builds the action and the conflict that reaches a climax and a resolution in the Gospels. For centuries, the people of Israel cried out for a final and complete answer to sin; they desired a Messiah. Just like a movie that builds conflict scene after scene and then finally resolves the conflict, the biblical story spends multiple books and numerous chapters building conflict. And then Jesus appears. The Gospels tell the dramatic story of John the Baptizer, the last of the Old Testament prophets, stepping forth to proclaim, "Behold, the Kingdom of God is at hand." And it is through Jesus' life, death, resurrection, and ascension that resolution is finally brought to the story.

Then, the rest of the story is the creation of this new organism called the church that preaches and teaches Jesus to the entire known world. This part of the story is the falling action; now that the conflict has been resolved, these are the outworkings of the story.

Looking at the Bible this way allows for several things. First, it keeps the story unified with Jesus at the very center and the point of the story. The Old Testament anticipates this Messiah, and the New Testament reflects upon Him by preaching Him to the world. Second, it shows us why the Old Testament is valuable and essential to the Christian faith. It is not a byproduct, not something that can just be discarded or ignored. No, it is indeed essential! It reveals God's character, and it is the "gateway" for the coming of Jesus, the Christ. Third, it unabashedly demonstrates that the entire biblical story discloses one God, not two gods as Marcion believed. This God is the one true God whose sovereign

control of history is beautifully displayed in the pages of Scripture as He redeems humanity from sin and provides the way for Himself and us to be reconciled to relationship. It is one story—a story of love. We hope you will embrace this view of the Bible and not be a "Martian/Marcion" Christian!

"How Do I Answer the Argument for Satan Because All Positives Have a Negative?"

I was hoping you could help me give an answer to my co-worker. He follows a lot of pagan beliefs. Today he was discussing how the "elite" run the world, and I asked him who he thinks influences the unjust "elite." He responded, "Satan." I asked,

Do you believe that there is such thing as Satan? and he replied, "Yes, every good thing in the world has a counterpart, hot and cold etc. Therefore since every positive force has a corresponding negative force, a negative 'spirit' must exist."

I was not sure how to respond, other than to say that is not what the Bible teaches, evil is not eternal, and Satan will be overthrown and sent to the lake of fire and tormented forever. I guess he is positing dualism. I wanted to know how I could break down the argument that Satan must exist because "all positives have a negative." Obviously I agree that satan is real, and I am not disputing his existence; I am disputing the argument he uses to arrive at Satan's existence.

It seems to me that you are quite right to point out that this is not what the Bible teaches. God is the eternal Creator of all that exists (other than Himself). Hence, there can be God without any Satan, good without any evil, etc. I think your response was right on target.

Not only is this true, but (as something of an aside) it's also important to remember that God did not originally create the angel who became Satan as an evil being. Rather, Satan fell into sin of his own free will. [Please see my answer to email, "What Caused Lucifer (Satan) to Fall?"]

The principle that every positive must have a negative is therefore simply false. Cold is the absence of heat. And one can certainly conceive of a logically possible "hot" world that no human being would ever regard as "cold." In addition, we must also remember that just because we can conceive of something's opposite, this does not mean (or prove) that the opposite actually exists. One can have heat without cold, light without darkness, love without hatred, etc. None of these REQUIRES an opposite. And for someone to claim that they

do would require some sort of argument or proof to that effect—not just an assertion that it is so. After all, we can think of many examples to the contrary. So why should we believe that all positives have a negative?

Finally, according to Occam's razor [Editor's note: "The simplest explanation is often correct"], we must not multiply causes (or entities) beyond necessity. The God of the Bible provides all the explanation we need regarding the origin of the universe, the fine-tuning of the universe, the existence of objective moral values, etc. To posit, in addition to God, an eternal "Satan", is not only unbiblical, it is also completely unnecessary.

At any rate, these are a few of the thoughts that occur to me after reading your letter. I hope this is helpful in talking with your friend.

Shalom in Christ,

Michael Gleghorn

Mind, Soul, and Neuroethics

Neuroscience is the next frontier for research, and Kerby Anderson urges Christians to pay attention to these findings and provide a biblical perspective to the research and an ethical framework for its application.

Let me begin with a question. Imagine that our medical technology has advanced enough that we can transplant a human brain. If we exchanged your brain with that of another person, would you wake up in your body with someone else's thoughts

and memories? Or would you wake up in the other person's body?

Or consider the following questions concerning brain research:

• Scientists are beginning to work on a "smart pill" that would increase your memory and intelligence. If such a pill existed, who should take it?

• Scientists are working to develop brain fingerprinting to reveal a person's knowledge of events. If perfected, should these brain scans be used like polygraph tests to detect if people are lying?

• Pharmaceutical companies are working to develop chemicals that block the formation of memories. If perfected, should these pills also be used to erase memories that people don't want to have?

• Areas of the brain can be stimulated or suppressed by placing a device over the scalp. Should doctors use these devices to control your brain?

These are just a few of the questions being raised in a relatively new ethical field of discussion known as neuroethics.

In the past few years, neuroscience has been making discoveries about the human brain at an incredible rate of speed. Advances in neuroscience and imaging methods have made it possible to observe the brain more directly. And advances in neurosurgery have also made it possible to intervene more precisely and effectively.

This new arena of neuroethics is beginning to deal with the hard questions about our rapidly growing knowledge of the human brain and our ethical and social responsibilities concerning this new information. Doctors, scientists, lawyers, politicians, and theologians are all interested in neuroethics. But as you can see from the above examples, the

implications of these concerns should extend to all of us since we will ultimately be affected by the moral and legal decisions concerning neuroscience.

In developing a Christian perspective on neuroethics, we should begin with a proper understanding of the mind and brain. Nearly all scientific investigation begins with the *a priori* assumption that we are material, not spiritual. Thus, scientists assume there is only a brain and not an immaterial mind. Put another way, they assume there is only a body and not a soul.

Dualism

Are we merely a brain or are we both brain and mind? This is a fundamental question in science, philosophy, and theology. New advances in science seem to be challenging the notion that we are both mind and brain.

Most Christians are Cartesian dualists in that they believe that the soul inhabits the body. The name Cartesian dualism comes from the philosopher René Descartes who four hundred years ago argued that identity and thought were distinct. He is famous for the phrase, "I think, therefore I am." In other words, the fact that he could think about himself showed that there was something distinct from him. He was doing something with his brain, but he was also distinct from his brain because he was having thoughts.

A quarter century ago, Probe Ministries published a book that showed that we are both mind and brain. The book, *The Mysterious Matter of Mind*, by Dr. Arthur C. Custance presented experimental evidence that led scientists to conclude that the mind is more than matter and more than a mere by-product of the brain.{1}

One of the most famous findings in this field involved the research of Wilder Penfield. Although he was born in the U.S.,

he did most of his research in Canada and was later celebrated as “the greatest living Canadian.”

In 1961, Penfield reported a dramatic demonstration of the existence of a mind that is separate from the brain. He found that the mind acted independently of the brain under controlled experimental conditions. His subject was an epileptic patient who had part of the brain exposed. When Penfield used an electrode to stimulate a portion of the cortex, here is what he reported:

> *When the neurosurgeon applies an electrode to the motor area of the patient’s cerebral cortex causing the opposite hand to move, and when he asks the patient why he moved the hand, the response is: “I didn’t do it. You made me do it.” . . . It may be said that the patient thinks of himself as having an existence separate from his body.*
>
> *Once when I warned a patient of my intention to stimulate the motor area of the cortex, and challenged him to keep his hand from moving when the electrode was applied, he seized it with the other hand and struggled to hold still. Thus, one hand, under the control of the right hemisphere driven by the electrode, and the other hand, which he controlled through the left hemisphere, were caused to struggle against each other. Behind the “brain action” of one hemisphere was the patient’s mind. Behind the action of the other hemisphere was the electrode.{2}*

This experiment (and others like it) demonstrates that there is both a mind and brain. Mind is more than just merely a by product of the brain.

Neuroscience: Opportunities and

Challenges

Neuroscience has been making discoveries about the human brain at an incredible rate of speed, and this provides both new opportunities and major ethical challenges. For example, existing brain imaging methods provide scientists with some very powerful tools to discover the structure and function of the human brain. These tools can detect various brain abnormalities. They can also help in the diagnosis of various neurological disorders.

Scientists have also been using these brain imaging machines to study emotions, language, and even our perceptions. It is possible that eventually these machines could even be used to read our thoughts and memories.

Scientists who have developed a brain fingerprinting machine believe they will be able to determine a person’s knowledge of events. By measuring electrical activity within the brain, they can see the response of a person to certain stimuli (words, sounds, pictures). Analysis of these responses might be helpful in various investigations.

Sometimes crime investigators use a polygraph machine to detect lies. But these devices are not completely foolproof. Scientists believe they might be able someday to develop accurate readings from functional magnetic resonance imaging (fMRI) to determine whether a person is telling the truth.

What are the implications of this? Is it possible that one day people who are suspected of a crime will be required to submit to a brain scan? Could brain scans be used to determine high-risk employees, potential criminals, even terrorists? For now, this is mere speculation, but neuroscience may force us to deal with these questions in the future.

Some have even speculated that measurements from these machines could help in distinguishing true memories from false

memories. In some experiments, certain areas of the brain appear to respond differently to true memories and false memories.

Could brain scans be used to predict certain neurological disorders? Scientists using fMRI have found that people with schizophrenia have different sizes of key brain structures (e.g., larger lateral ventricles, reduced hippocampus, etc.) than those people without this mental disorder. Many of the ethical questions already surrounding the use of genetic screening would no doubt surface with the application of brain scans that would screen for neurological disorders.

A related question in this growing field of neuroethics is the use of mood altering drugs. Psychopharmacology has already provided pills to treat depression, anxiety, and even attention deficit disorder. Future development in this area will no doubt yield other mood-altering and brain-altering drugs.

In the future, it might be possible to genetically engineer drugs or even genetically engineer human beings to treat and even cure mental disorders. This same technology might also allow scientists to increase memory and perhaps even increase intelligence. For now, the idea of a smart pill is just science fiction. But what if we develop such a medicine? Who should get the pill? Under what conditions would it be administered? These are all questions for the twenty-first century in this growing field of neuroethics.

Erasing Memories

In the film *Eternal Sunshine of the Spotless Mind*, a couple (played by Jim Carrey and Kate Winslet) undergo a brain procedure that allows them to erase each other from their memories because their relationship has turned sour. The story develops when Joel discovers that his girlfriend, Clementine,

has undergone a psychiatrist’s experimental procedure which removes him from her mind. Joel then decides to undergo the same procedure. In the process, however, he rekindles his love for her.

Although the film is science fiction and essentially a thought experiment, erasing memories is something scientists are pursuing right now. They are already testing a pill that, when given after a traumatic event, seems to make resulting memories less intense. The pill appears to blunt memory formation and could be very useful as a treatment. For example, this pill could be used if a person experiences a horrible event (such as a rape or witness to a murder). It would also be helpful to those who have endured an earthquake, hurricane, or tsunami.

Doctors also believe that it would help victims of post-traumatic stress disorder (PTSD). This was a problem first recognized in the Vietnam War and a disorder diagnosed in men and women who have been serving in Iraq and Afghanistan. Those affected often experience mental symptoms (flashbacks) and physical symptoms.

When a traumatic event occurs, the brain is flooded with stress hormones (such as adrenalin) that actually store these memories in different ways than the manner in which memories are normally preserved. These memories seem to be stored in our brain’s hard drive, and therefore seem nearly impossible to erase.

The new pills are a class of drugs known as beta blockers which can cross the blood-brain barrier. They can actually dull the impact of the memory formation by getting to the place where stress hormones work to form these traumatic memories. Scientists believe that they can not only blunt the impact of these memories, they might even prevent PTSD. Some physicians believe it might be possible to cure PTSD by triggering these memories and then administering this new drug

to eliminate them.

Not everyone is excited about the prospects of erasing memories. Already we have a variety of drugs that can alter a person's personality. Antidepressants and tranquilizers are used by millions of people every day. Antipsychotic drugs are used to treat people with such mental disorders as schizophrenia. Erasing a person's memory with certain drugs would certainly change their personality. Would that change always be for the better?

When researchers working in the area of erasing memories were asked to testify before the President's Council on Bioethics, there was deep concern. Chairman Leon Kass argued that painful memories serve a purpose and are part of the human experience.

Biblical Perspective

Advances in the field of neuroscience certainly raise new ethical dilemmas for the twenty-first century. But they also challenge the biblical understanding of human nature. Neuroscience is beginning to explain a great deal of human behavior by mapping the human brain. Scientists are locating regions that influence personality, character, and even spirituality. Does this challenge the concept of Cartesian dualism? Can we explain mind as merely a by-product of brain?

One researcher in this field thinks the research does challenge this biblical foundation. She says you "can still believe in what Arthur Koestler called 'the ghost in the machine'." But she concludes that "as neuroscience begins to reveal the mechanisms of personality, character, and even sense of spirituality, this Cartesian line of interpretation becomes strained. If these are all features of the machine, why have a ghost at all? By raising questions like this, it seems likely that neuroscience will pose a far more fundamental challenge to religion than evolutionary

biology."{3}

So if you think evolution has been a challenge to Christianity, just wait until the findings of neuroscience reach the society at large. There are large and significant issues that need to be addressed. So what is a Christian perspective on these issues of mind/brain and body/soul?

First, the Bible teaches that when the soul leaves the body, the body is dead (James 2:26). And if the soul returns to the body, the whole person comes back to life (Luke 8:55). This dual nature of the body and soul is documented in many passages of Scripture (Matt. 26:41; Rom. 8:10; 1 Cor. 5:5; 6:17, 20; 7:34; 2 Cor. 7:1; Gal. 5:17).

Second, the New Testament also talks about the resurrection of the body, and Paul elaborates on the nature of this body (1 Cor. 15:35-44). We have the most complete picture of this resurrection body by observing what the Bible tells us about Jesus Christ after His resurrection. Paul tells us this is the body we will have (Phil. 3:20-21).

This resurrection body of Jesus Christ was able to freely pass through physical barriers (walls, locked doors). But it could also be examined for purposes of identification. It is a body that is able to communicate with the physical world (can be seen, heard, felt). Likewise, we can anticipate that our bodies will be able to share a meal and then disappear only to reappear in another location. It will also be a body that can act upon the physical world by moving objects, going for a walk, even starting a fire.

The Bible teaches that we are more than matter. We are both body and soul, mind and brain. Neuroscience is the next frontier for research, and Christians must pay attention to these findings and provide a biblical perspective to the research and an ethical framework for its application.
