

“I Think Some of the Indian Gods Are Aliens From Ancient Visits to Earth”

I think we're not alone in the universe because of lots of old evidence of aliens found on Earth. I'm an Indian, there are (traditionally 330 million!) gods and goddesses in Hindu culture. I'm always confused about whom to pray. In Indian culture I heard about the flying machine that our gods used at that time and also heard that our ancestors found all the planets in our solar system thousand years ago that scientists came to know with the help of modern technology. I think thousand of years ago aliens visited India, and it may be some of the Indian gods are aliens. So there is a possibility that they exist in the universe.

You brought up an interesting and relevant issue worth discussing. People talk a lot about [alien beings](#) these days. The Bible also speaks about aliens. In the Biblical language, they are called angels, spirits, cherubim, etc. The Bible also speaks about their interactions with human beings at different times in the history of mankind.

All through the history, without geographical and cultural limits, mankind has been making scientific discoveries based on research methods available to us. Such scientific advantages have been made by people of different cultures and nationalities in different part of the world. India is one of them. However, to assume that they were revelations will be making a giant leap. This will undermine the foundational principles of science, which is observation and research. The Bible teaches about seeking and finding. Those who seek find solutions in spite of what their culture and nationality is. Fictions will always predict possibilities. There is no wonder when a fiction speaks about flying objects or beings. There

are other examples in history where people wrote about flying objects before man actually made airplanes.

The Bible teaches that there is only One God who deserves worship and prayer. This one God created everything else in the world. Therefore, God is not an alien to any culture of country. He is the Master and Creator of the whole universe. In fact belief in many gods will fall on its own feet when you ask a couple of questions—who created god “D,” who created god “C,” who created god “B,” and you will end up in an absolute One. That is the One we call God and who deserves your worship and prayer.

“Is Quantum Physics Legitimate or Spiritually Dangerous?”

Michael, thank you so very much for your insightful articles about [Reiki](#). My father was an excellent medical doctor and surgeon and after retiring, he was led into Reiki and he is always trying to push this on us. His three adult Christian children all have known from the start that this was not of the Lord and have rejected it. Now he is advocating Quantum Physics as the answer to life even though he claims to be a Christian. Have you written anything about Quantum Physics or can you give me just a couple of scriptural reasons why it is off-base? I imagine that they are the same as the reason for

Reiki.

Thanks for your kind and encouraging letter. I'm glad to hear that the article on Reiki was helpful to you. Concerning quantum physics, this is a legitimate and highly-developed branch of contemporary physics. Any difficulties with quantum physics would not be due to the legitimate scientific work being done. However, difficulties with quantum physics do arise, and these can usually be traced back to two sources of origin.

In the first place, the vast majority of people who mention quantum physics have very little idea of what it is they're actually talking about. They may have read a popular-level book or two on the subject (or they may not have even done that). With this bit of new knowledge they may then make all kinds of far-fetched and dubious claims. The problem is, they usually don't know what they are talking about and it is difficult for anyone to challenge them (because not many people have a deep enough knowledge of this important field of physics to do so). In particular, quantum physics has been embraced by many non-Christian Eastern religious movements (or religious movements influenced by such philosophies) as a means of showing that physical reality is paradoxical, or illogical, etc. This often fits in with their religious claims, but many of these views are based on misunderstandings, misappropriations, and misinterpretations of quantum physics—and hence are not to be accepted uncritically.

Secondly (and this is very important), there are MANY DIFFERENT interpretations of what the mathematics and experimental science behind quantum physics is actually telling us about the nature of physical reality. This is terribly important to understand, but sadly, most people are not aware of this. Many of the "wild and crazy" ideas which people propound with an appeal to quantum physics are based on a particular interpretation of the mathematical and physical

evidence. But the problem with this is that there are numerous competing interpretations, each one of which adequately accounts for the data, but many of which would NOT result in the same strange views of the physical world. And here's the kicker: we do NOT know which interpretation is the right one! Hence, as you can easily imagine, many of the strange ideas which are based on a particular interpretation of quantum physics may be incorrect, simply because the interpretation upon which these ideas are based is incorrect!

For more on quantum physics from an informed Christian perspective, please check out some of William Lane Craig's materials on his website [here](#). These are the search results from "quantum physics" on his website. Craig is a world class Christian philosopher and theologian, who is intimately acquainted with the issues in contemporary physics. You might also want to refer your father to Craig's work. His website has scholarly and popular-level articles, podcasts, debates with leading atheists, etc. I would highly recommend Craig's work.

I hope this is helpful. May the Lord richly bless you in your service for Him!

Shalom in Christ,

Michael Gleghorn

Prometheus, God and Film: 10

Science Fiction Movies with a Theological Theme

Dr. Terlizzese looks to see if we can find a Christian worldview perspective or, at least, questions which need theological answers in a number of popular science fiction movies. He finds some good themes and bad themes and offers advice on how to view movies of all types.

Sci-fi films have never been more popular than they are today. Witness this summer's offerings: *Prometheus* (see below), *Chronicle*, *The Hunger Games* even the comic book-inspired *Avengers* and the romantic comedy *Seeking a Friend for the End of the World* feature elements of science fiction. And like most arts and literature, they contain elements of theology. This genre borrows a basic aspect of the Christian worldview concerning the value and meaning of individuals in a world of technological conformity.

Sci-fi combines a somewhat biblical understanding of mankind with an almost religious belief in technological progress. This fuels the popular fear that technology will rob people of their souls or individuality. The modern technological worldview is rooted in *materialism*: it affirms that people are basically machines who can be objectified, categorized and manipulated as any other object in nature. One film scholar notes this connection:

Scientism opened the doors for a mechanical view of mankind. . . . We are no longer special, no longer sacred – neither the form (body) nor the mind. "Let us conclude boldly then that man is a machine, and that there is only one substance, differently modified, in the whole world. What will all the weak reeds of divinity, metaphysic, and nonsense of the schools avail against this firm and solid oak?"[Le Mettrie]. [Sci-fi] arises out of the tension between this kind of

“rude” scientism and the Christian cosmology. Scientism “robs” humans of their very humanity and makes them out to be biological machines, much like the alien children in Village of the Damned. [{1}](#)

Reaching a Popular Audience

The sci-fi genre asks, What is human nature?[{2}](#) In light of technological advance, how we define humanity becomes more crucial as technology changes not just the natural world, but humanity itself. It has become imperative not only for philosophers, but for everyone to ask, how is technological advance transforming human nature? The failure to perceive change caused by new technology creates a serious problem for an age so enormously influenced by it. Sci-fi movies serve as a philosophical treatise for average people who are not professionally trained, raising questions and issues that would otherwise be lost on the common person because of their intolerable abstraction.

The movies speak the common language of our times. When teachers want to make an idea concrete or illustrate a point, they grope for an example from a popular movie. Most people love movies and to be able to relate abstract concepts through such a relevant medium will certainly create a profound effect.

We normally think of sci-fi as promoting innovative technology that holds out optimistic promise for the future of mankind. This is generally true of print media produced by popular writers like Jules Verne, H. G. Wells or Isaac Asimov. However sci-fi film has taken another tack by appealing to commonly held suspicions of technological progress. An optimistic view of progress views new technology as a liberating force destined to lift the burdens of work, cure disease, improve communication and free humanity from natural limits. A pessimistic view takes the opposite direction; instead of

liberation it fears that new technology will create a new form of enslavement and dehumanization that will rob people of their individuality or their very souls.

Given the popularity of movies and the latent theological premise of many sci-fi films, the following list presents an incomplete, but important sample of theology in sci-fi movies. It is intended to help Christians read the movies from more than a literalist perspective by paying attention to the metaphors and symbols that constitute their meaning. These movies may contain objectionable material, but more importantly, resonate with redemptive themes worth analyzing.

Movies are cultural day dreams, serving as modern folklore and morality tales. They signify a shared message of hope or fear not always transparent without analysis. So let's get started!

Prometheus, 2012

Humanoid aliens seed earth with their DNA that creates humanity. They leave clues behind on how to find them in a distant galaxy. When earthlings discover their origins they uncover a plan for human extinction, revealing that the gods are hostile towards their own children. The movie raises classic theological and philosophical questions such as, Where did we come from? Why are we here? And, where are we going? Though never distinguishing between wishful thinking or religious truth claims, it presents faith as a choice for meaning, even in the face of the most hostile conditions. The cross remains a prominent and enduring symbol of hope and human redemption. Humans are worth saving and are not genetic mistakes that deserve extinction.

The Terminator, 1984

Robots represent both hope and fear of technological aspirations. They symbolize the incredible potential of technological capability and human replacement. Robots are mechanical people that embody the fears of extreme

rationalization. Cartesian philosophy identified reason as the definition of human nature, which takes its final form in the computer. Robots are nothing more than embodied computers. Sometimes the movies picture them as our slaves and protectors. Robots enable people to live work-free lives as with Robby the Robot from *Forbidden Planet* (1956) who undoubtedly depicts the most iconic and loveable of all movie robots. However, most robots represent something evil and ominous as in *The Terminator*.

The premise states that computer intelligence Sky Net became self-aware and immediately perceived humanity as a threat and initiated a nuclear strike. Some people survived to fight back and achieved ultimate victory led by the messianic figure John Conner sent to rescue humanity from techno-enslavement and termination. Human victory over the machines necessitated that Sky Net send a robot agent back in time to eliminate the mother of the rebel leader. Commentators read the plot as loosely based on the story of the Birth of Christ. *The Terminator* encapsulates the abiding fear that mankind will one day destroy itself through the use of its own technology. That which was meant to enhance human life will one day annihilate it. The need for salvation remains paramount as the last installment *Terminator Salvation* (2009) indicates.

***The Matrix*, 1999**

In the not too distant future Artificial Intelligence (AI) becomes self-aware and identifies humanity as a threat and initiates a war, a common theme in science fiction. Humanity burns the atmosphere to create perpetual darkness in order to block the sun and deny the machines a power source. The machines respond by turning people into batteries and growing them in a huge incubator, kept alive in a vegetative state through feeding them the blood of the previous generation and by sending false impressions to the brain that simulate a normal existence. Billions of people are given fabricated lives in a huge computer-simulated world called the Matrix.

Zion, the only surviving human city, awaits deep underground for their savior Neo, rescued from the Matrix and believed to possess the power to fight the machines within the Matrix and free mankind.

In addition to the obvious messianic overtones the series presents a complicated patchwork of different religious ideas from Christianity and Buddhism to Greek mythology as a counterpoint to the Cartesian philosophy that reason alone ultimately defines human nature. The computer best embodies the logical conclusion of rational thought and the loss of human freedom that results from the universal acceptance of rationalism. *The Matrix* demonstrates an acute historical irony in rejecting rationalism and looking to premodern religious ideas to define human nature and provide meaning to life, even though these ideas are considered anachronistic in a secular and technological age.

The Book of Eli, 2010

The Book of Eli presents an explicitly Christian message of obedience to the voice of God in describing the spiritual journey and act of faith by the blind nomad Eli. Set in a post-apocalyptic world of the near future, a drifter finds his purpose in life through committing to memory the *King James Bible*, then spending thirty years traveling across the wasteland to an unknown destination. Along the way Eli encounters a ruthless mayor seeking the power of the book for his own political ends. In addition to the spiritual journey the movie depicts the dark side of faith when used to control and manipulate others.

The Invasion, 2007

The Invasion is an excellent remake of the original science fiction masterpiece *Invasion of the Body Snatchers* (1956, 1979) in which spores from outer space take over human bodies by emptying them of free will and any unique qualities as individuals, making everyone soulless and identical. The

message is clear: that a world without free will may be more peaceful and happy, but would be horribly inhuman. What price are we willing to pay for peace, security and harmony? If these qualities are not derived from love then we do not have a world worth living in. In the absence of freedom, a nightmarish world of automatons pretending to be humans assumes control. They are bodies without souls. In the chilling words of the original movie, "Love, desire, ambition, faith—without them life's so simple."[\[3\]](#) This may be life in unison, but it is more like the life of a grove of trees all getting along rather nicely. This movie franchise argues for the idea that love and choice are essential aspects of our humanity without which life loses its purpose.

Planet of the Apes, 1968

This 1960's protest film decries the potential genocide of nuclear war. Astronauts find themselves stranded on a strange planet where apes rule humans. The movie has several themes including the debate between evolution and creation, science and religion, church and state relations as well as racism and offers an accurate commentary on humanity as a creature that wages war on all those around it including himself. It is rare to find any movie that weaves so many themes into its message, while not revealing its main point until its climactic surprise ending.

The Day the Earth Stood Still, 1951

We do not need to see films based on the Gospels in order to find Christ at the movies. The presence of a Christ-like figure is usually signified when a heroic character with extraordinary powers dies and comes back to life, such as in the case of Klatuu, the representative of a galactic alliance who visits earth during the Cold War and warns that we must turn our efforts to peace or face annihilation because earth poses a threat to the rest of the galaxy. Humanity's technical abilities now exceed its self-control, which will end in

disaster if it does not turn to peaceful ends.

Star Wars, 1977

Science fiction generally focuses on the power of reason and technology. *Star Wars* follows a different tack, making faith and religion central. The movie sets the action in the familiar device of good vs. evil, but adds the dimension of faith being more powerful than technical ability in the promotion of both good and evil. The *Star Wars* franchise contrasts with that other perennially popular space melodrama *Star Trek*, which often belittles notions of God, faith and religion. Based on the secular humanism of its creator Gene Roddenberry, technology or human potential trumps faith and religion. In contrast, *Star Wars* derives from the ecumenical ideas of George Lucas, where faith represented by “the force”—for better or worse—is more powerful than raw technological ability.

Close Encounters of the Third Kind, 1977

Everyman Roy Neary experiences a close encounter with a UFO that sends him on a journey to discover its meaning. In the process he acts erratically, causing his wife Ronnie to leave him with their three children. The further he delves into the mystery, the more he discovers the truth behind his encounter: that extraterrestrials have visited earth and are seeking him out along with a select group of others. The movie vaguely resembles John Bunyan’s famous allegory of the Christian life, *Pilgrim’s Progress*. Aliens often represent transcendence in the movies, either as angelic messengers or demonic powers. *Close Encounters* may be interpreted as a spiritual journey that seeks out a higher purpose in life beyond mundane existence.

2001: A Space Odyssey, 1968

2001 lives up to its reputation as the greatest science fiction movie ever made. The movie begins with a tribe of

hominids on the brink of starvation. An extraterrestrial force endows them with the gift of technology in the form of animal bones used to hunt for food and murder their opponents. The action then moves to outer space when the murder weapon is flung into the air and transforms into a space ship, suggesting continuity between the earliest technology and the most advanced.

Mankind finds itself on the brink of encountering extraterrestrial (ET) life near Jupiter. A small crew travels to the location of a beacon with the assistance of an onboard supercomputer, the HAL 9000, who (he is strangely human) becomes threatened by the crew who want to turn off his higher cognitive ability. HAL murders the crew except for one member who escapes and finishes the mission. After his encounter with the ET, Commander Bowman converts into an angelic figure, or star child who returns to earth. Director Stanley Kubrick comments on the meaning of this scene when he says of Bowman, "He is reborn, an enhanced being, a star child, an angel, a superman, if you like, and returns to earth prepared for the next leap forward in man's evolutionary destiny." [\[4\]](#)

The star child is the first of a new race representing a spiritual rather than technological change. "Kubrick's vision reveals technology as a competitive force that must be defeated in order for humans to evolve." [\[5\]](#) The message of *2001* is that, though technology assists humanity in survival, it also threatens human existence.

A Final Word

Humanity now needs a spiritual transformation, not more technology, in order to survive. Although we find this theological message in an unusual source, it still represents an important warning we have yet to heed.

DNA, Information, and the Signature in the Cell

Where did we come from? Heather Zeiger uses Stephen Meyer's book *Signature in the Cell* to *logically show that the best answer is an intelligent cause—God—rather than natural causes.*

Where Did We Come From?

Where did we come from? A simple question, but not an easy answer. Darwin addressed this question in his book, *On the Origin of Species*. Although he never really answered how the universal common ancestor first came to life, he implied that it was from natural causes. In this article, we are going to

look at Darwin's method of deducing occurrences in the past based on observations we see today. This is now referred to as the *historical* or *origins science* method. We will find that purely naturalistic causes fall short of explaining what we know about DNA, but intelligent design seems to be a promising alternative. Then we will look at scripture and see how Christians can use these evidences for design to talk about who that designer is. We will be using Stephen Meyer's new book, *Signature in the Cell*, to guide us on the science and method of approaching this question.

Charles Darwin's book, *On the Origin of Species* discusses his theory on how natural selection acts on living things so that the fittest organisms for a particular environment survive, and how this process eventually leads to novel species and body plans. Implied in his work is the notion that all living things came from nature and from natural causes. So his presupposition is that life must have first come from impersonal things like matter and energy. Because of this, origin-of-life scientists have been trying for years to demonstrate how life may have come from non-life.

Let's try to figure out how a cell could form from purely naturalistic processes. Better yet, since we now know that natural selection acts on random mutations within the genome, let's focus in on DNA, the instruction booklet for the cell. Without DNA, cells would not function.

DNA is part of a complex information-processing systems^[1] DNA is a long, helical structure found inside the nucleus and mitochondria of the cell. It is made of a four-molecule alphabet arranged in a very specific order. This sequence is like an instruction book telling the cell what parts to use to build a protein. But this instruction book needs to be decoded with other proteins. The difficult thing is that proteins are needed to make more DNA, but DNA is needed to make proteins. And the cell cannot function without proteins. This means that the first DNA molecule must have been made

differently than how it is made today.

DNA is a very complex information processing system. In fact, Bill Gates has compared it to a computer program but far, far more advanced than any software ever created.^[2] DNA is more than just an improbable sequence of bases; it is functional. It tells the cells what to do. So the question we really need to answer is, how can this kind of information arise in the first place?

Origins and Operations Science

We are investigating what science can tell us about the origin of life. Did we just come out of a chemical soup, or was it something else? First, we need to answer this question: How did DNA, the body's instruction book, first get here? In order to answer the question, we need to decide what method to use to investigate this question. Since we are looking at the science, we should use the scientific method. However, we need to make a distinction between approaching something that is a re-occurring, testable phenomenon, and a singular event in the past.

As a scientist, I usually work in the area of *operations science*. This is the type of science we learn in school. You start with a hypothesis, then you conduct an experiment to test your hypothesis. Repeat your experiment several times, collect data, and make conclusions about your hypothesis. Operations science deals with regular, repeatable things that can usually be described by mathematical formulas. Oftentimes, operations science is looking at some kind of naturally occurring process.

But there is another type of science that forensics experts and archeologists use. It is called origins science. Origins science determines what caused a singular event in the past. The role of origins science is to first determine if something

was caused by chance, natural laws, or intelligence. For example, one could find a rock formation that looks very similar to a human head. Was this formation caused by chance and natural laws, such as wind and rain wearing away the rock? Or was it caused by intelligence? Did someone carve the rock to look this way?

Origins science operates under a different set of rules than operations science because the event in question has already happened, and it is not a reoccurring, observable phenomenon. The best that we can do is look at clues to give us a reasonable guess as to what might have happened. In *Signature in the Cell*, Meyer uses origins science to determine if DNA is a result of chance, natural laws, or intelligence:

Thaxton and his colleagues argued that inferring an intelligent cause was legitimate in origins science, because such sciences deal with singular events, and the actions of intelligent agents are usually unique occurrences. On the other hand, they argued that it was not legitimate to invoke intelligent causes in operations science, because such sciences only deal with regular and repeating phenomena. Intelligent agents don't act in rigidly regular or lawlike ways, and therefore, cannot be described mathematically by laws of nature.[\[3\]](#)

DNA replication happens all of the time, but it requires proteins. But proteins are made by instructions from DNA. So the first DNA molecule must have been made in a special, atypical way, meaning it qualifies as origins science. Origins science allows for singular acts of intelligence to explain certain phenomena.

This means we need to investigate, using origins science, how the first DNA molecule with its information-carrying capacity was produced.

What Are the Possibilities?

DNA is the code for life. If we determine where it came from, then we are one step closer to determining the origin of life. Let's look at the typical origin of life theories posed by scientists as our first step in our origins science method, and see where theories are lacking or where they are helpful. Two things these theories all have in common is that they presume no designer, but only natural causes, and none of them can explain the origin of information.

The first option is that DNA might have arisen by chance. When scientists talk about chance, they are not saying that some entity called Chance did something. They mean random chemical shuffling, and out of that came DNA. But it's not good enough to explain how random chemicals came together. Think of scrabble pieces. To say that DNA came about by chance would be similar to saying that someone shook a bag of scrabble pieces and threw them on the floor and it spelled out a sentence. And this would not be just any sentence, but step-by-step instructions on how to build a cellular machine. Chance is not a good explanation for the origin of DNA, because the probability of getting something as specified and complex as DNA is well beyond the accepted probability of zero.

The other option is DNA might have come about because of necessity or natural law. Maybe there is some chemical or natural reason that forced the DNA molecules to form. Two examples of this type of origin of life theory are *self-organization* and *biochemical predestination*. The idea behind both of these is that the molecular alphabet in DNA arranged itself because of chemical properties or environmental factors. Unfortunately, scientists have found that the molecules in DNA do not chemically interact with each other because they are stuck to a phosphate backbone, not to each other.[\[4\]](#) On top of that, there isn't even a chemical attraction between these DNA sequences and the protein parts

they code for (known as a *codon*). Since there is not a self-organizing motivation for this, and there is not an environmental factor that would favor certain combinations over others, necessity seems to fall short of explaining the functional information of DNA.

Some scientists propose that it is a combination of chance and necessity. The most popular origin of life models are based on this theory. However, Stephen Meyer shows in his book that the two most popular models, the *RNA-first world* and the *Oparin* model, do not explain how functional information first arose. Ultimately these theories boil down to claiming that random chance causes functional information.

So if all of the naturalistic theories of origin of life fall short, then perhaps we should expand our options to theories that allow for intelligent agents.

What if We Allow Intelligence?

It seems that all of the naturalistic explanations for the origin of life fall short of accounting for the information-rich molecule, DNA. As Meyer points out, apart from DNA and the machinery in cells, such specified information is not found anywhere in the natural world.[\[5\]](#) The only time we see these properties is in human language and writing. So if DNA has the properties of something that was designed, then why not entertain the idea that it was designed?

Today design is not permitted as an explanation in science. However, historically, this has not been the case. In fact, it was a belief in an intelligible and coherent world created by God that motivated early scientists such as Newton, Boyle, and Pascal.[\[6\]](#) However, after the Enlightenment (mid-1700s), many scientists started operating under different assumptions. They assumed that only natural causes, such as chance and necessity, are permitted to explain observations.

Flash forward to Charles Darwin's time (1860s). Darwin looked at presently acting conditions to extrapolate back to the origin of all living things. He saw that environmental factors select for certain traits, such as beaks on finches. And he saw that things like dog breeding will select for certain desired traits. He therefore concluded that maybe the various animals and body plans came from conditions similar to this. He named this selective force, this breeder, natural selection. This was based on what Darwin knew in the 1850s, and some assumptions about intelligent causes influenced by Enlightenment thinking. At that time Darwin knew nothing about DNA. It would not be discovered until the 1950s.

Stephen Meyer discusses how presently there are no known natural causes for the kind of functional information we see in DNA. The only place we see this is in human language and writing. So perhaps we cannot assume natural causes. Maybe DNA arose by intelligent design. Furthermore, experimental efforts to try to produce DNA or RNA in the lab show that a chemist or a computer programmer must be involved in the experiment in order to obtain functional information. Natural selection cannot act as a breeder, because it does not have the end goal in mind.

Intelligent Design is a strong possibility for explaining the origin of DNA. It is something that we see in operation today. And it is experimentally justified.

What Does This Have to Do with Christianity?

We have been looking at the properties of DNA and how it has all of the characteristics of a written code. Using the methods of origins science that Stephen Meyer used in *Signature in the Cell*, we can conclude that intelligent design is the best explanation for the origin of DNA. Intelligence is causally adequate to produce a code like DNA. It is

observable, in the sense that today intelligent agents produce codes. And any experiments that try to reproduce DNA seem to require the input of information by an intelligent agent to make anything meaningful. This is why Meyer calls DNA the signature in the cell. However, the science alone cannot tell us whose signature it is, so we need to look elsewhere for that. That's where Christianity comes in.

As Christians we believe that God reveals himself through general and special revelation. General revelation is God revealing things about himself in nature. Think of it like God's fingerprints on creation. Special revelation is what God has specifically revealed in the Bible. If we want to find out whose signature is in the cell, we need special revelation to inform us on that. And the Bible says this much. Right before Paul says that creation reveals the attributes of God in Romans 1:18-20, he says it is the gospel that brings salvation in verses 16 and 17.

From the science it is reasonable to say DNA first arose by intelligent design. DNA is one of many extra-Biblical clues pointing us to a designer. This evidence, taken with many other extra-biblical evidences such as the fine-tuning of the universe for life, the moral law on our hearts, and even the way that we know gravity works the same today as it did yesterday, makes one suspicious that there must be a designer. Now take the evidences for the authority of Scripture from archeology and the Bible's internal structure and consistency and we have many reasons to believe that this designer is the God of the Bible. As Paul says in Romans 1, "His invisible attributes, namely, his eternal power and divine nature, have been clearly perceived, ever since the creation of the world, in the things that have been made. So they are without excuse" (v. 20). So, even though the science will not bring someone to a saving knowledge of Christ, they are without excuse because it does reveal God's attributes. Maybe when someone sees the Signature in the Cell, they will ask, whose signature is it?

Notes

1. "After the early 1960s advances in the field of molecular biology made clear that the digital information in DNA was only part of a complex information-processing system, an advanced form of nanotechnology that mirrors and exceeds our own in its complexity, storage density, and logic of design." Stephen C. Meyer, *Signature in the Cell* (HarperOne, 2009), 14.

2. Bill Gates, *The Road Ahead* (Viking, 1995), 188; quoted in Meyer, *Signature*, 12.

3. Meyer, *Signature*, 29.

4. The only time the nucleotides in DNA interact with each other is when they are paired, A-T, C-G, and they do this through hydrogen bonding. However, this pairing is with nucleotides across from each other and serves to protect the DNA molecule. The coding has to do with the sequence of bases next to each other, and there is no chemical reason for one nucleotide to "prefer" being next to another.

5. "Apart from the molecules comprising the gene-expression system and machinery of the cell, sequences of structures exhibiting such specified complexity or specified information are not found anywhere in the natural—that is, the nonhuman—world." Meyer, *Signature*, 110.

6. In the radio transcript, I included James Maxwell in this list. While he is among scientists whose belief in God did influence his work, he lived from 1831-1879 which was after the beginning of the Enlightenment. I chose to take his name out here for clarity, although he is a good example of someone who did not hold to the typical presuppositions of the Enlightenment.

“God Forbids Fornication, But Webster’s Definition Is Limited. Other Sex Okay Then?”

[Editor’s Note: Probe received a lengthy, technical question regarding this topic which quoted the Merriam Webster online dictionary (www.m-w.com). The definitions of the [related terms](#) were unnecessarily graphic, but the gist of the question was this:]

Having read your Q & A section regarding sexuality and your article [How Far Is Too Far?](#), I would appreciate your valued opinion in my response to this article. What is the boundary of illicit (premarital) sexual activity? Does it include orgasms without direct interaction of the couple’s sexual organs, which is basically the dictionary definition of intercourse? Can one engage in sexually pleasurable activities without crossing the line to fornication?

Thanks for the question. Well, the explanation you gave is certainly creative. You obviously spent plenty of time deliberating your argument and giving an inductive explanation. But I do notice some moral gaps that need to be addressed.

First, Merriam-Webster’s dictionary is not a repository of God’s holy standards. A dictionary can only give a brief technical definition of a word. We define right and wrong according to what the Bible says, not the limited definitions crafted by men.

There is no loophole by which we escape the standard of God. A dictionary has a scientifically sterile definition; the Bible is much more expansive. The dictionary focuses what happens physically for fornication to occur; the Bible focuses on what happens in the heart for fornication to occur.

Jesus gave us our highest standard of sexual sin in Matthew 5:28 when he said, "But I tell you that anyone who looks at a woman lustfully has already committed adultery with her in his heart." For Jesus, it was not just about the physical act of sin; it was the mental and spiritual act of sin. The Lord's standard of sexual immorality focused on the person's heart and their intent.

In reading your argument, it appears quite obvious that what you described is a sexual act by merely examining the result. The end game of sexual activity is sexual gratification. In the eyes of God, how you get there is less important than arriving at a place of sin. The touching of one another's genitals while kissing heavily until there is a sexual climax is a sexual act. It is obvious that you are describing the touching of a sexual organ, stimulating it for pleasure, and having a sexual release. That description is a classical physical definition of sex.

In your hypothetical description, you stated there was prolonged and pronounced kissing. I will borrow from the logic of our previous article you cited:

Scripture says, "It is good for a man not to touch a woman" (1 Cor. 7:1). One of the meanings for the Greek word for "touch" means "to press against in such a way as to kindle or catch on fire." So another way to translate this verse would be, "It is good for a man not to touch a woman so that they become sexually aroused."

I can guarantee that a person's thoughts will not be pure in those moments of kissing and touching.

What is also obvious from your description is the intent of the act itself. You looked up the dictionary's definition of sex, and then devised activities that have the same sexual pleasure of sex while avoiding the technical aspects of intercourse. The intentionality of the act is what separates two similar actions from one that is acceptable versus one that is sinful. For example, touching your boyfriend's/girlfriend's genitals would be sin because the touching is for sexual pleasure. By contrast, a nurse touching someone's genitals for a checkup is not sin because of the intent (medicinal analysis).

As believers, we are to honor God; not gratify our fleshly desires. When we try to rationalize questionable actions, we are not abiding by the Spirit of God. We are to control ourselves in a way that is holy and honorable (1 Thessalonians 4:3-8). If we ever have doubts as to what is godly or not, we can ask ourselves this question: If Jesus were standing here, would he approve of my actions? The answer to that question will lead us to an answer that upholds God's Word, His Will, and our integrity.

I hope that answers your question.

“Is Reiki Just Another Means to Medicine?”

I have a daughter who is 8 and [whose health] is very compromised. We have been to doctors, etc. who have yet to

come up with an answer. I have had several people recommend Reiki. I have hesitated because I am very leery of “energy” based healings. I am a believing, Bible reading Christian. There is a woman in our church who suggested Reiki and is trained in it. In “testing” her [words against Scripture] I catch a lot of New Age phrases that I am not comfortable with and [it has] become clear she is not actually reading the Word of God...(vs. just attending services).

Your answer supplying [a Christian Perspective on Reiki](#) was the best in terms of guiding me that this is wrong. I think that the reason Reiki is more questionable is because it is reaching out to the “spiritual realm” that does not glorify God. Yet, I am wondering, given that conventional medicine does not glorify God (more so it glorifies the doctor) is Reiki just another means to medicine? Or is it not considered viable because it is so spiritually based?

I just do not understand energy healing and many people (including Christians) suggest we explore energy healing. Given my faith...I know that God is sovereign and can use ALL things...but He also warns us. Do you mind if I ask you to further elaborate? Given modern medicine is simply a tool of God, it does also violate some scriptural things if you look at Old Testament teachings (i.e. vaccines contain animal DNA and we are not to mix this, etc.)

I just want to put this to rest once and for all and know if I am not neglecting an avenue of potential healing for my child. Thank you.

Thanks for your letter. I’m truly sorry to hear about the health difficulties your daughter is struggling with! However, I could not, in good conscience, recommend Reiki energy medicine as a possible solution. You mentioned an email response which I wrote on a Christian perspective on Reiki, but I’m wondering if you read the article I wrote on Reiki? If not, you can find it [here](#).

In the article I go into much more depth than I can do over email. I offer an overview of Reiki energy medicine, look into the question of whether or not there is any legitimate scientific support for such energy, ask about Reiki's alleged success stories, and discuss some reasons why I believe that Christians should be concerned about Reiki.

First, and foremost, I think that we should be concerned about the spiritual aspects of Reiki. As my article spells out in much more detail, I think that we should be concerned about where the power of Reiki really comes from (provided that there is any real power there to begin with). This leads to my second main concern: if Reiki really has no power whatever to effect genuine (as opposed to merely psychosomatic) healing of the body, then we could end up endangering people's lives by sending them to a Reiki practitioner, instead of a properly credentialed medical doctor. I also explain my reasoning here in more detail in my article.

Of course, modern Western medicine is not perfect. But its reliance on quality control, reproducible results, the scientific method, extensive training, education, and licensing, etc., clearly distinguish it from much of energy medicine. In addition, since those who practice it are not typically calling upon spirit guides and other questionable entities, it is much less likely to entangle those making use of it with possible demonic involvement.

At any rate, as my article shows, it seems to me that there are sufficient reasons for Christians to be wary of Reiki and to avoid it. Others may disagree, but this is definitely my opinion on the matter.

I hope this is helpful and, again, please check out my [article](#) on the subject (if you have not done so already).

“Christianity Teaches Four Gods, Right?”

The Bible clearly states that there is only one God. Deuteronomy 6:4 states, “Hear O Israel, the Lord is our God, the Lord is one.” The Father is obviously called God as seen throughout the Bible. No one will argue that point. So there is one member of the Trinity, the Father.

Jesus the Son, is a separate person but He is also called God. John 1:1 says, “In the beginning was the Word, and the Word was with God, and the Word was God.

The Holy Spirit is also a separate person, and He is also called God.

Let me see if I got this right. Please correct me if I’m wrong.

God is a trinity, composed of three divine persons, namely, the Father, Son, and holy spirit. God is also the Father, the first person of the first God who is a trinity. God is also the Son, the second person of the first God who is a trinity. God is also the holy spirit, the third person of the first God who is a trinity.

All of this means that there are four Gods. One three-person God and three single-person Gods. But to avoid the stigma of polytheism, all four Gods are really one God.

Did I get that right?

I don't know if you really wanted a response or not, since it seems like you may have just been trying to have some fun. But obviously no orthodox trinitarian Christian would subscribe to the doctrine as you have characterized it.

Actually, you basically got it right when you wrote: "God is a trinity, composed of three divine persons, namely, the Father, Son, and holy spirit." In other words, God just "is" the unity of the three divine persons. Traditionally, this has been expressed by saying that God is one in essence, three in subsistence. Trinitarian Christians do not propose the absurd (and logically contradictory) notion that there is only one God, and yet (somehow) there are three Gods. That would clearly be incoherent. Rather, we maintain that there is only one God (monotheism) who mysteriously subsists as three distinct persons (Trinitarianism).

Consider an analogy (which I take from the Christian philosopher William Lane Craig). Cerberus was a three-headed dog that guarded the entrance to Hades in Greek mythology. Cerberus, therefore, was one dog with three heads. Now we could imagine that each head constituted a distinct center of consciousness. We could even give them names, say, Spike, Bowser, and Rover. Spike would be conscious of being Spike, but also of being Cerberus. He would also be conscious of not being either Bowser or Rover. The same could be said, in an appropriate way, regarding the conscious experience of both Bowser and Rover. Now consider Cerberus as a spiritual, disembodied entity. You have one being, Cerberus, who has three distinct centers of consciousness (i.e. Spike, Bowser, and Rover). This is something akin, I think, to what the Trinitarian maintains about the nature of God, recognizing, of course, that God is an infinitely higher being than any merely finite being. I could write more, but you get the idea. Hopefully this analogy will help you better understand what Christians maintain about the nature of God. Of course, it's only an analogy—and to ridicule it for that reason would

really be rather petty. I offer it solely as a way of making this doctrine a bit more comprehensible, while nonetheless acknowledging that there is genuine mystery here as well.

Best wishes as you continue to explore and examine Christian doctrine!

“Where Does the Bible Say Jesus is 100% Man and 100% God?”

Where in the bible can I find that Jesus is 100% man and 100% God?

Thanks for your question. If you're looking for an exact quote, then I'm afraid that the Bible doesn't say this anywhere.

Why do Christians believe that Jesus was fully divine and fully human, then? Well, we look at what the Bible does teach and we seem to be compelled to adopt this view.

For example, Jesus claimed, “before Abraham was born, I am ” (John 8:58), clearly alluding to Exodus 3:14. He also claimed to be one with the Father (John 10:30-33). He acknowledged that he was the Christ, or Messiah (Mark 14:60-64; compare with Daniel 7:13-14). He also claimed that our eternal destinies hinged on our response to him (Luke 12:8-9).

In addition, Jesus is said to be the eternal word of God incarnate (John 1:1-3, 14). He is called the Creator and head of the church (Colossians 1:15-20). These are just a few of the passages which speak of Christ's deity or divinity.

Other passages speak of his humanity. For example, Jesus was conceived and born of a woman (Matthew 1:18-25). He thus had a human body. He experienced hunger, thirst and fatigue (Matt. 4:2; John 4:6; etc.). He suffered and died (John 19:34). He could be heard, seen and touched (1 John 1:1). He evidenced the emotional and intellectual qualities of a human being (see Matt. 26:37 and Mark 9:21).

Again, there are plenty of other passages concerning Jesus' humanity. When theologians try to put all of this together, they conclude that the Bible teaches that Jesus was both divine and human.

Hope this is helpful.

Shalom in Christ,

Michael Gleghorn

Blessings and Judgment

Kerby Anderson answers some intriguing questions: Is God blessing America? Will God bring judgment against America? What are the biblical principles of blessing and judgment we find in the Bible concerning the nation of Israel? Do any of them apply to our nation?

Is God blessing America? Will God bring judgment against

America? These are questions I often hear, and yet rarely do we hear good answers to these questions. Part of the reason is that Christians haven't really studied the subject of blessings and judgment.

In this article we deal with this difficult and controversial subject. While we may not be able to come to definitive answers to all of these questions, I think we will have a better understanding of what blessings and judgment are from a biblical perspective.

When we think about this topic, often we are in two minds. On one hand, we believe that God is on our side and blessing us. After the attacks on 9/11, for example, we launched a war on terror and were generally convinced that God was on our side. At least we hoped that He was. Surely God could not be on the side of the terrorists.

On the other hand, we also wonder if God is ready to judge America. Given the evils of our society, isn't it possible that God will judge America? Haven't we exceeded what other nations have done that God has judged in the past?

In his book *Is God on America's Side?*, Erwin Lutzer sets forth seven principles we can derive from the Old Testament about blessing and cursing. We will look at these in more depth below. But we should first acknowledge that God through His prophets clearly declared when he was bringing judgment. In those cases, we have special revelation to clearly show what God was doing. We do not have Old Testament prophets today, but that doesn't stop Christians living in the church age from claiming (often inaccurately) that certain things are a judgment of God.

In the 1980s and 1990s we heard many suggest that AIDS was a

judgment of God against homosexuality. In my book *Living Ethically In the 90s* I said that it did not look like a judgment from God. First, there were many who engaged in homosexual behavior who were not stricken with AIDS (many male homosexuals and nearly all lesbians were AIDS-free). Second, it struck many innocent victims (those who contracted the disease from blood transfusions). Was AIDS a judgment of God? I don't think so.

When Hurricane Katrina struck New Orleans in 2005, people called into [my talk show](#) suggesting this was God's judgment against the city because of its decadence. But then callers from the Gulf Coast called to say that the hurricane devastated their communities, destroying homes, businesses, and churches. Was God judging the righteous church-going people of the Gulf Coast? Was Hurricane Katrina a judgment of God? I don't think so.

In this article we are going to look at blessings and judgments that are set forth by God in the Old Testament so that we truly understand what they are.

Seven Principles (Part 1)

In his book *Is God on America's Side?* Erwin Lutzer sets forth seven principles we can derive from the Old Testament about blessing and cursing. The first principle is that God can both bless and curse a nation.[\[1\]](#)

When we sing "God Bless America" do we really mean it? I guess part of the answer to that question is what do most Americans mean by the word "God"? We say we believe in God, but many people believe in a god of their own construction. In a sense, most Americans embrace a god of our civil religion. This is not the God of the Bible.

R.C. Sproul says the god of this civil religion is without power: "He is a deity without sovereignty, a god without

wrath, a judge without judgment, and a force without power.”{2} We have driven God from the public square, but we bring him back during times of crisis (like 9/11) but he is only allowed off the reservation for a short period of time.

We sing “God Bless America” but do we mean it? Nearly every political speech and every “State of the Union” address ends with the phrase, “May God bless America.” But what importance do we place in that phrase?

Contrast this with what God said in the Old Testament. God gave Israel a choice of either being blessed or being cursed. “See, I am setting before you today a blessing and a curse—the blessing, if you obey the commandments of the Lord your God, which I command you today; and the curse, if you do not obey the commandments of the Lord your God, but turn aside from the way that I am commanding you today, to go after other gods that you have not known” (Deuteronomy 11:26-28).

We should first acknowledge that Israel was unique because it had a covenant with God. America does not have a covenant with God. But it does still seem as if the principle of blessing and cursing can apply to nations today.

A second principle is that God judges nations based on the amount of light and opportunity they are given.{3} The Old Testament is a story of Israel. Other nations enter the story when they connect with Israel. Because Israel had a unique relationship with God, the nation was judged more strictly than its neighbors.

God was more patient with the Canaanites—it took four hundred years before their “cup of iniquity” was full, and then judgment fell on them. Likewise, Paul points out (Romans 2:12-15) that in the end time, God would individually judge Jews and Gentiles by the amount of light they had when they were alive.

A nation that is given the light of revelation will be held to

greater account than a nation that is not.

Seven Principles (Part 2)

In his book *Is God on America's Side?* Erwin Lutzer sets forth seven principles we can derive from the Old Testament about blessing and cursing. The third principle is that God sometimes uses exceedingly evil nations to judge those that are less evil.[{4}](#)

Israel was blessed with undeserved opportunities, yet were disobedient. God reveals to Isaiah that God would use the wicked nation of Assyria to judge Israel. "Ah, Assyria, the rod of my anger; the staff in their hands is my fury! Against a godless nation I send him, and against the people of my wrath I command him, to take spoil and seize plunder, and to tread them down like the mire of the streets" (Isaiah 10:5-6). In another instance, God reveals to Habakkuk that He was raising up the Chaldeans to march through the land, plundering, killing, and stealing (Habakkuk 1:5-11).

As I mentioned above, Christians are often of two minds when they think about America. On the one hand they believe America is a great country. We have been willing to rebuild countries after war or natural disaster. American missionaries travel around the world. Christians broadcast the gospel message around the world.

On the other hand, America is a decadent country. We are the leading exporters of pornography and movies that celebrate sex, violence, and profanity. We have aborted more than 50 million unborn babies. Our judicial system banishes God from public life. Will God use another nation to judge America?

A fourth principle is that when God judges a nation, the righteous suffer with the wicked.[{5}](#) A good example of this can be found in the book of Daniel. When God brought the Babylonians against Judah, Daniel and his friends were forced

to accompany them.

We also see a parallel to this in manmade and natural disasters. Whether it is a terrorist attack or a hurricane or tsunami, we see that believers and nonbelievers die together. We live in a fallen world among fallen people. These actions (whether brought about by moral evil or physical evil) destroy lives and property in an indiscriminate way.

A fifth principle is that God's judgments take various forms.[{6}](#) Sometimes it results in the destruction of our families. We can see this in God's pronouncement in Deuteronomy 28:53-55. When the Israelites were forced to leave their homes to go to foreign lands, the warnings were fulfilled. Today we may not be forced into exile, but we wonder if "God is judging our families just the same. He is judging us for our immorality."

In Deuteronomy 28:36-37, "The Lord will bring you and your king whom you set over you to a nation that neither you nor your fathers have known. And there you shall serve other gods of wood and stone." When the ten tribes of Israel were exiled to Assyria, they were assimilated into the pagan culture and never heard from again.

Seven Principles (Part 3)

The sixth principle is that in judgment, God's target is often His people, not just the pagans among them.[{7}](#)

Yes, it is true that God judges the wicked, but sometimes the real purpose of present judgments has more to do with the righteous than the wicked. Not only do we see this in the Old Testament, we also see this principle in the New Testament. 1 Peter 4:17-18 says: "For it is time for judgment to begin at the household of God; and if it begins with us, what will be the outcome for those who do not obey the gospel of God? And 'If the righteous is scarcely saved, what will become of the

ungodly and the sinner?'"

This raises a good question. If judgment begins at the house of God, is the church today under judgment? Have Christians become too worldly? Have Christians become too political and thus depend on government rather than on God? Have Christians become too materialistic? Someone has said we should change the motto on our coins from "In God we trust" to "In gold we trust."

A seventh and final principle is that God sometimes reverses intended judgments.[\[8\]](#) We must begin with an observation. God's blessing on any nation is undeserved. There is always sin and evil in the land. When God blesses us, either individually or corporately, it is an evidence of God's grace.

Sometimes God calls for judgment but then spares a nation. A good example of that can be found in the life of Jonah. God called him to that city to preach repentance for their sins. He didn't want to go because it was the capital city of the Assyrians who had committed genocide against Israel. But when Jonah finally obeyed God, the city was saved from judgment.

God also used Old Testament prophets to preach to Israel. But the people didn't have a heart to care. Consider the ministry of Micah and Jeremiah. Actually, Micah preached a hundred years before Jeremiah and warned Judah that her "wound is incurable." A century later, Jeremiah is brought before the priests and false prophets who want him killed. After hearing him, they appeal to the preaching of Micah (Jeremiah 16:19). King Hezekiah listened to Micah's words and sought God who withheld judgment.

Erwin Lutzer gives another example from eighteenth century England. The country was in decline, but God reversed the trend through the preaching of John Wesley and George Whitefield.

Conclusion

I would like to conclude by returning to the questions about whether God is blessing or judging our nation.

First, we must acknowledge that no nation can claim that God is on its side. In fact, there is a long and sorry history of nations that have claimed this. And the “God is on our side mentality” has done much harm throughout the history of the church.

Kim Riddlebarger: “Instead of letting God be God, our sinful pride leads us to make such pronouncements that are not ours to make. In these cases, God is not sovereign, he is a mascot.”[\[9\]](#) As a nation, we must not claim that God is on our side.

This is also true in the political debates we have within this nation. Richard Land in his book, *The Divided States of America*, says: “What liberals and conservatives both are missing is that America has been blessed by God in unique ways—we are not just another country, but neither are we God’s special people. I do not believe that America is God’s chosen nation. God established one chosen nation and people: the Jews. We are not Israel. We do not have ‘God on our side.’ We are not God’s gift to the world.”[\[10\]](#)

This brings us back to the famous quote by Abraham Lincoln who was asked if God was on the side of the Union forces or the Confederate forces. He said: “I do not care whether God is on my side; the important question is whether I am on God’s side, for God is always right.”

Second, we should be careful not to quickly assume that a disease or a disaster is a judgment of God. Above I gave examples of people wrongly assuming that AIDS or Hurricane Katrina was a judgment of God.

We can take comfort in knowing that this isn’t just a problem

in the twenty-first century. Apparently it was even a problem in the first century. The tower of Siloam fell and killed a number of people. It appears that those around Jesus thought it was a punishment for their sins. He counters this idea by saying: "Or do you suppose that those eighteen on whom the tower in Siloam fell and killed them were *worse* culprits than all the men who live in Jerusalem? I tell you, no, but unless you repent, you will all likewise perish" (Luke 13:4-5).

We should wisely refrain from too quickly labeling a disease or disaster as a judgment of God. But we should take to heart the words of Jesus and focus on our need for salvation and repentance.

“Does God Really Know All?”

Ex 16:4“Then the LORD said to Moses, ‘Behold, I will rain bread from heaven for you; and the people shall go out and gather a day’s portion every day, that I may test them, whether or not they will walk in My instruction.’”

Deut 13:3“You shall not listen to the words of that prophet or that dreamer of dreams; for the LORD your God is testing you to find out if you love the LORD your God with all your heart and with all your soul.”

I have a problem responding to those verses; at first glance, they seem to make his point because they seem to imply that God tests people so that He “might know” if they love Him. Deut. 13:3 is especially difficult for me. This does not seem to change in the different versions of the Bible I have referred to. Is there something about the definition of the terms or something else that I might be missing in the text?

There are two primary ways of responding to this issue. First, we must point out that other passages of Scripture speak of God’s omniscience, including His knowledge of the future (see Psalm 139:1-4, 16; Psalm 147:5; Isaiah 46:9-10; Acts 1:24; Romans 8:29-30; Hebrews 4:13; etc.). If Scripture does not contradict itself, then there must be some way to reconcile these apparent discrepancies.

Second, as Geisler and Howe point out in *When Critics Ask*, “What God knows by cognition, and what is known by demonstration, are different.” The Bible often speaks from a human perspective. Consider Geisler and Howe’s analogy: “A math teacher might say, ‘Let’s see if we can find the square root of 49,’ and then, after demonstrating it, declare, ‘Now we know that it is 7,’ even though she knew from the beginning what the answer was” (p. 52). I think it’s the same way with God.

Shalom,

Michael Gleghorn
