The Psychology of Prisoner Abuse

Those Awful Pictures

Do you remember how you felt as the Iraq prisoner abuse scandal began to unfold in spring 2004? Maybe you saw the disturbing pictures when they were first aired on CBS television's *60 Minutes II*. Soon they were transmitted around the globe. They greeted you on the front page of your morning newspaper and on the evening news. The stream seemed endless.

You saw naked Iraqi prisoners in various stages of humiliation: hooded, naked men stacked in a pyramid; others lying on the floor or secured to a bed; one in a smock standing on a box with his arms outstretched and wires attached to him. In some of the photos, male and female American soldiers grinned and pointed. In one picture, a female soldier stood holding a leash around the neck of a naked male prisoner. In others, soldiers grinned over what appeared to be a corpse packed in ice.

What feelings did you experience? Shock? Anger? Rage? Disgust? Maybe you felt embarrassed or ashamed. "How could they do such degrading things to other human beings?" you might have wondered. Perhaps you feared how the growing storm might affect the life of your friend or family member serving in Iraq. Or wrestled with how to explain the abuse to your children.

Finger pointing began almost as soon as the story broke. High-ranking military and government officials announced that these were aberrations carried out by a few unprincipled prison guards. Accused military police claimed they were merely following orders of military intelligence officials to soften prisoners up for interrogation. Others insisted soldiers had a

moral obligation to disobey orders to do wrong. The accused countered that the harsh techniques were in place before they arrived for duty at the prison. Ethical arguments surfaced that the war on terror demanded tough methods to help prevent another 9/11.

What factors prompt people to abuse others in such degrading ways? What goes on inside the minds of the abusers? Are there special social forces at work? While this article won't attempt to analyze specific cases in the Iraq prison scandal, it will consider some fascinating psychological experiments that reveal clues to the roots of such behavior. The results -- and their implications -- may disturb you. A biblical perspective will also offer some insight.

The Stanford Prison Experiment

CBS News correspondent Andy Rooney said the Iraq prisoner abuse is "a black mark that will be in the history books in a hundred languages for as long as there are history books."{1}

Stanford University psychologist Philip Zimbardo was not surprised by the Abu Ghraib prison abuse. He had observed similar behavior in his famous 1971 experiment involving a mock prison in the basement of the Stanford psychology building.{2} The experiment showed that otherwise normal people can behave in surprisingly outrageous ways.

Zimbardo and his colleagues selected twenty-four young men considered from interviews and psychological tests to be normal and healthy. Volunteers were randomly assigned to be either "prisoners" or "guards." Guards wore uniforms and were told to maintain control of the prison and not to use violence.

On the second day, prisoners rebelled, asserting their independence with barricades, taunting and cursing. Guards suppressed the rebellion. Zimbardo reports that the guards

then “steadily increased their coercive aggression tactics, humiliation and dehumanization of the prisoners.”{3} He says the worst abuse came at night when guards thought no psychology staff were observing.{4} Zimbardo remembers that the guards “began to use the prisoners as playthings for their amusement…. They would get them to simulate sodomy. They also stripped prisoners naked for various offenses and put them in solitary for excessive periods.”{5} They dressed them in smocks, chained them together at the ankles, blindfolded them with paper bags on their heads, and herded them along in a group.{6} Sound familiar?

It was Berkeley professor Christina Maslach, Zimbardo’s then romantic interest whom he later married, who jolted him back to reality. On Day Five, she entered the prison to preview the experiment in preparation for some subject interviews she had agreed to conduct the next day. Shocked by what she saw, she challenged Zimbardo’s ethics later that evening – screaming and yelling in quite a fight, she recalls. That night, Zimbardo decided to halt the experiment.{7}

Zimbardo feels that prisons are ripe for abuse without firm measures to check guards’ lower impulses.{8} He recommends “clear rules, a staff that is well trained in those rules and tight management that includes punishment for violations.”{9}

An old Jewish proverb says, “Like a roaring lion or a charging bear is a wicked man ruling over a helpless people.”{10} Unfettered prison officials -– or most anyone -– can yield to their baser natures when tempted by power inequalities.

The Perils of Obedience

What about those who say they were only obeying authority? How far will people go to inflict harm under orders? In the 1960s, Yale psychologist Stanley Milgram conducted classic experiments on obedience.{11} (Ironically, Milgram and Stanford psychologist Philip Zimbardo were high school

classmates.{12})

At Yale, Milgram set up a series of experiments "to test how much pain an ordinary citizen would inflict on another person simply because he was ordered to by an experimental scientist." He writes, "Stark authority was pitted against the subjects' strongest moral imperatives against hurting others, and, with the subjects' ears ringing with the screams of the victims, authority won more often than not."{13}

Milgram's basic design involved a volunteer "teacher" and a "learner." The learner was actually an actor who was in on the deception. The learner was strapped to "a kind of miniature electric chair" with an electrode on his wrist. The teacher sat before an impressive-looking "shock generator " with switches indicating voltages from 15-450 volts.{14}

The teacher asked test questions of the learner and was instructed to administer increasingly large shocks for each incorrect answer. (You say you've known some teachers like that?) The machine here was a fake —- no learner received shocks -— but the teacher thought it was real.

In the initial experiment, over 60 percent of teachers obeyed the experimenter's orders to the end and punished the victim with the maximum 450 volts. Milgram found similarly disturbing levels of obedience across various socioeconomic levels. His conclusions after hundreds of experiments were chilling:

> *…Ordinary people, simply doing their jobs, and without any particular hostility on their part, can become agents in a terrible destructive process. Moreover, even when the destructive effects of their work become patently clear, and they are asked to carry out actions incompatible with fundamental standards of morality, relatively few people have the resources needed to resist authority.{15}*

Why did they obey? Milgram offers several possibilities. Fears

of appearing rude, desires to please an authority, aspirations to do one's best, and lack of direct accountability can all cloud judgment. But could there be something deeper, something in human nature that influences abuse? A famous novel illustrates how the dark side of human nature can affect group behavior.

Lord of the Flies

Prisoner abuse shows what can happen when power inequalities and inappropriate devotion to authority distort one's moral compass. Nobel laureate William Golding's short novel, *Lord of the Flies,*{16} illustrates through a fictional story how similar flaws can manifest in society. A film version of the book helped inspire the popular television series *Survivor*.{17}

Lord of the Flies opens on a remote, uninhabited island on which some British schoolboys, ages six to twelve, find themselves after an airplane crash. An atomic war has begun, and apparently the plane was evacuating the boys when it was shot down. The island has fresh water, fruit, and other food. The setting seems idyllic. Best of all, the boys discover, there are no grownups (the plane and its crew presumably have washed into the sea).

Four central characters soon emerge. Ralph is elected leader. Piggy, an overweight asthmatic and champion of reason, becomes Ralph's friend. Simon is a quiet lad with keen discernment. Jack becomes a hunter.

At first, the boys get along without much conflict. Soon, though, fears envelop them, and they debate whether an evil beast might inhabit the island. Jack and his followers kill a wild pig and, in frenzied blood lust, dance to chants of "*Kill the pig! Cut her throat! Bash her in!*"{18} When Ralph criticizes Jack for breaking some tribal rules, Jack replies, "Who cares?" His hunting prowess will rule.{19}

One night, some boys see a dead parachutist, which they mistake for the "evil beast" and flee. Jack posts a pig's head onto a stick in the ground as a gift for the beast. The decaying, fly- covered pig's head soon becomes for Simon the "Lord of the Flies," a sort of personification of evil.{20} Later, Simon discovers that the feared "beast" is only a human corpse. Running to tell the group this good news, he encounters their mock pig-killing ritual. The crazed boys attack Simon and kill him. Nearly all the boys follow Jack and, acting like savages with painted bodies and spears, kill Piggy and hunt down Ralph. Only the surprise appearance of a British naval officer, drawn by the smoke from a fire, halts the mad pursuit. Ralph and the boys dissolve in tears. Ralph weeps, as Golding writes, "for the end of innocence, the darkness of man's heart…."{21}

Lord of the Flies is filled with symbolism, both biblical and from Greek tragedy. But Golding's stated purpose was "to trace the defects of society back to the defects of human nature."{22} Could his point that darkness lurks in the human heart help explain the prisoner abuse?

Animal House Meets *Lord of the Flies*

Prisoner abuse is a sad reality in the U.S. and abroad.{23} The Iraq prisoner abuse scandal smacks of fraternity hazing on steroids, *Animal House* meets *Lord of the Flies.* Consider from this sad episode some lessons for both prison reform and society in general:

- *Establish clear rules for prison staff; train them well and punish them for violations*, as Stanford psychologist Philip Zimbardo recommends.
- *Educate against blind conformity*. Some of Milgram's experimental subjects found the strength to resist abusive authority.{24} Some psychologists feel that strong moral values and experience with conformity can

strengthen moral courage.{25}

- *Involve external observers and critics*. Often outsiders, not emotionally swept up in a project or event, can through their psychological distance more clearly assess ethical issues. For example, Christina Maslach, Philip Zimbardo's friend and colleague who challenged the ethics of his prison experiment, credits her late arrival on the scene with facilitating her concern. The experimenters who had planned and had been conducting the experiment for five days were less likely to be startled by the developing misconduct, she maintained.{26}
- *Realistically appraise human nature's dark side.* Again, Golding said *Lord of the Flies* was "an attempt to trace the defects of society back to the defects of human nature."{27} Jesus of Nazareth was, of course, quite clear on this point. He said, "From within, out of a person's heart, come evil thoughts, sexual immorality, theft, murder,adultery, greed, wickedness, deceit, eagerness for lustful pleasure, envy, slander, pride, and foolishness. All these vile things come from within…."{28}

Some dismiss as simplistic any analyses of human suffering that begin with alleged defects in human nature. They would rather focus on changing social structures and political systems. While many structures and political systems need changing, may I suggest that a careful analysis of the human heart is not simplistic? Rather it is fundamental.

Perhaps that's why Paul, a leader who agreed with Jesus' assessment of human nature,{29} focused on changing hearts. Paul was a former persecutor of Jesus' followers who zealously imprisoned them{30} but later joined them and became a prisoner himself.{31} Paul eventually claimed that when people place their faith in Jesus as he had, they "become new persons. They are not the same anymore, for the old life is

gone. A new life has begun!”{32} Could this diagnosis and prescription have something to say to us amidst today’s prisoner abuse scandals?

19. Ibid., 84.

20. Many have noted that the phrase “lord of the flies” translates the word “Beelzebub.” See, for instance, E.L. Epstein, “Notes on Lord of the Flies,” in Golding, op. cit., 279: “‘The lord of the flies’ is, of course, a translation of the Hebrew Ba’alzevuv (Beelzebub in Greek) which means

literally ‘lord of insects.'” Theologian Louis A. Barbieri, Jr., commenting on Matthew 10:24 ff. says, “Beelzebub (the Gr. has Beezeboul) was a name for Satan, the prince of the demons, perhaps derived from Baal-Zebub, god of the Philistine city of Ekron (2 Kings 1:2). ‘Beelzebub’ means ‘lord of the flies,’ and ‘Beezeboul’ or ‘Beelzeboul’ means ‘lord of the high place.'” (In “Matthew,” John F. Walvoord and Roy B. Zuck, *The Bible Knowledge Commentary* [Wheaton, Illinois: Scripture Press Publications, Inc., 1983, 1985], Logos Research Systems digital version.) Biblical references to Beelzebub include Matthew 12:24, 27; Mark 3:22; Luke 11:15, 18, 19. In a 1962 interview, Golding himself referred to “the pig’s head on the stick” as “Beelzebub, or Satan, the devil, whatever you’d like to call it….” (James Keating, “Interview with William Golding,” in Golding, op. cit., 192.)

21. Golding, op. cit., 186-187.

22. Epstein, op. cit., 277-278. The words are Golding’s.

Six Months in Paris that Changed the World

Decisions have consequences. Our own lives and world history confirm that. The 1919 post-World War 1 Paris Peace Conference made decisions that echo in today's headlines. Fascinating stories about Iraq, Israel, Palestine and China prompt us to consider the impact of our own daily choices.

 *This article is also available in Spanish.*

Carving Up the World

Think about the really important decisions you have made in your life: choices concerning your education, vocation, spouse, or friends; your spiritual beliefs and commitments. Are you happy with the outcomes? Have you made any bad choices in life that still haunt you?

Choices have consequences and how we make decisions can be critical. In this article, we'll look back more than eighty years ago at a fascinating gathering of world leaders who made significant decisions that touch our lives today.

In 1919, leaders from around the globe gathered in Paris to decide how to divide up the earth after the end of World War 1. Presidents and prime ministers debated, argued, dined, and attended the theater together as they created new nations and

carved up old ones. Margaret MacMillan, an Oxford Ph.D. and University of Toronto history professor, tells their captivating story in her critically acclaimed bestseller, *Paris 1919: Six Months that Changed the World*.{1} *The Sunday Times* of London says, "Most of the problems treated in this book are still with us today indeed, some of the most horrific things that have been taking place in Europe and the Middle East in the past decade stem directly from decisions made in Paris in 1919."{2}

The cast of characters in this drama was diverse. The Big Three were leaders of the principal Allied nations: U.S. president Woodrow Wilson and the prime ministers of France and England, Georges Clemenceau and David Lloyd George. Joining them was a vast array of "statesmen, diplomats, bankers, soldiers, professors, economists and lawyers . . . from all corners of the world." Media reporters, businesspersons and spokespersons for a multitude of causes showed up.{3}

Lawrence of Arabia was there, the mysterious English scholar and soldier wrapped in Arab robes and promoting the Arab cause.{4} Franklin Delano Roosevelt and Winston Churchill, not yet leaders of their governments, played supporting roles. A young Asian man who worked in the kitchen at the Paris Ritz asked the peacemakers to grant independence from France for his tiny nation. Ho Chi Minh – and Vietnam – got no reply.{5}

This article highlights three of the many decisions from the 1919 Paris Peace Conference that still influence headlines today. They concern Iraq, Israel, and China. Fasten your seatbelt for a ride into the past and then "Back to the Future." First, consider the birth of Iraq.

Creating Iraq

During the first six months of 1919, U.S. president Woodrow Wilson along with French and British prime ministers Clemenceau and Lloyd George considered exhausting appeals for

land and power from people around the globe. At times, they found themselves crawling across a large map spread out on the floor to investigate and determine boundaries.{6} The challenges were immense. Clemenceau told a colleague, “It is much easier to make war than peace.”{7}

Eminent British historian Arnold Toynbee, who advised the British delegation in Paris, told of delivering some papers to his prime minister one day. To Toynbee’s delight, Lloyd George forgot Toynbee was present and began to think out loud. “Mesopotamia,” mused Lloyd George, “. . . yes . . . oil . . . irrigation . . . we must have Mesopotamia.”{8}

“Mesopotamia” referred to three Middle Eastern provinces that had been part of the collapsed Ottoman empire: Mosul in the north, Basra in the south, and Baghdad in the middle. (Is this beginning to sound familiar?) Oil was a major concern. For a while back then, no one was sure if Mesopotamia had much oil. Clues emerged when the ground around Baghdad seeped pools of black sludge.{9}

Mesopotamia’s British governor argued that the British, largely for strategic security reasons, should control Mosul, Basra, and Baghdad as a single administrative unit. But the three provinces had little in common. MacMillan notes, “In 1919 there was no Iraqi people; history, religion, geography pulled the people apart, not together.”{10} Kurds and Persians chafed under Arabs. Shia Muslims resented Sunni Muslims.{11} (*Now* is this sounding familiar?)

Eventually geopolitical realities prompted a deal. In 1920, the Brits claimed a mandate for Mesopotamia and the French one for Syria. Rebellion broke out in Mesopotamia. Rebels cut train lines, attacked towns and murdered British officers. In 1921, England agreed to a king for Mesopotamia. Iraq was born. In 1932, it became independent.{12} Today . . . well, read your morning paper. Decisions have consequences.

Creating A Jewish Homeland

Another major decision made at the Paris Peace Conference affected the Jewish world and, eventually, the entire Middle East.

In February 1919, a British chemist appeared before the peacemakers to argue that Jews of the world needed a safe place to live. Jews were trying to leave Russia and Austria by the millions. Where could they go? Chaim Weizmann and his Zionist colleagues thought they had the perfect answer: Palestine.{13}

Zionism had a powerful ally in British foreign secretary, Arthur Balfour. Balfour was a wealthy politician with a strange habit of staying in bed all morning. "If you wanted nothing done," reflected Winston Churchill, Balfour "was undoubtedly the best man for the task."{14} Son of a deeply religious mother, he was fascinated with the Jews and Weizmann's vision.{15}

Prime Minister Lloyd George was another fan. Raised with the Bible, he claimed to have learned more Jewish history than English history. During the war, Weizmann, the Jewish chemist, provided without charge his process for making acetone, which the British desperately needed for making explosives. In return, Lloyd George offered Weizmann support for Zionism. Lloyd George later hailed that offer as the origin of the declaration supporting a Jewish homeland. The French posed an alternate theory: Lloyd George's mistress was married to a well-known Jewish businessman.{16}

In October 1917, the British issued the famous Balfour Declaration, pledging to help establish a Jewish homeland in Palestine. In 1919, Weizmann and other Zionist leaders made their pitch to the Paris peacemakers. But there was a problem. The Brits had made conflicting promises. During the war, they had supported a Jewish homeland in Palestine. They had also

encouraged the Arabs to revolt against Ottoman rule, promising them independence over land that included Palestine.{17}

President Wilson, the son of a Presbyterian minister, was sympathetic to Zionism. “To think,” he told a prominent American rabbi, “that I the son of the manse should be able to help restore the Holy Land to its people.”{18} But the peacemakers postponed a decision. In 1920, at a separate conference, the British got the Palestinian mandate (a form of trusteeship) to carry out the Balfour Declaration. Palestinian Arabs were already rioting against the Jews.{19} And today? Well, check your radio news.

Decisions have consequences. Next, how Paris 1919 influenced the great Asian dragon.

China Betrayed

U.S. president Woodrow Wilson once described a negotiating technique he used on an associate. “When you have hooked him,” explained Wilson, “first you draw in a little, then give liberty to the line, then draw him back, finally wear him out, break him down, and land him.”{20}

A Chinese-Japanese conflict would challenge Wilson’s negotiating skills.{21} The Chinese had joined the Allies and hoped for fair treatment in Paris. Many Chinese admired Western democracy and Wilson’s idealistic vision.

Shantung was a strategic peninsula below Beijing. Confucius, the great philosopher, was born there. His ideas permeated Chinese society. Shantung had thirty million people, cheap labor, plentiful minerals and a natural harbor. Shantung silk is still fashionable today. In the late 1890s, Germany seized Shantung. In 1914, Japan took it from the Germans.{22}

In Paris, Japan wanted Shantung. Japan sported a collection of secret agreements that remind one of a *Survivor* TV series. China placed hope in Wilson’s famous Fourteen Points, which

rejected secret treaties and included self-determination.{23}

The Chinese ambassador to Washington called Shantung "a Holy Land for the Chinese" and said that under foreign control it would be a "dagger pointed at the heart of China."{24} Wilson seemed sympathetic at first, but the decision on Shantung had to wait until late April as the Allies finalized the German treaty. By then, an avalanche of decisions was overwhelming the peacemakers. When the Japanese forced their hand, Wilson, Clemenceau and Lloyd George conceded Shantung to Japan in exchange for Japan's concession on another significant treaty matter.{25}

Chinese blamed Wilson for betraying them. On May 4, thousands of demonstrators rallied in Tiananmen Square. The dean of humanities from Beijing University distributed leaflets. May 4 marked the rejection of the West by many Chinese intellectuals. New Russian communism looked attractive to some. In 1921, radicals founded the Chinese Communist Party. That dean of humanities who had distributed leaflets became its first chairman, Mao Tse-tung. His party won power in 1949{26} and today . . . have you listened to the news recently?

Iraq, Israel, Palestine, China . . . Paris 1919 influenced them all. What does all this mean for us?

Decisions, Consequences, and You

As they departed Paris in 1919 after the signing of the Treaty of Versailles, Woodrow Wilson told his wife, "It is finished, and, as no one is satisfied, it makes me hope we have made a just peace; but it is all in the lap of the gods."{27}

As the journalists and delegations left Paris, the hotels that had become headquarters for the conventioneers reopened for regular business. Prostitutes groused that business dipped.{28}

The big three peacemakers did not last much longer in power. Lloyd George was forced to resign as prime minister in 1922. Clemenceau ran for president in late 1919, but withdrew in anger when he discovered he would face opposition. Wilson faced great resistance in the U.S. Senate which never ratified the Treaty of Versailles. In October 1919, a massive stroke left him bedridden and debilitated. In December, he learned he had won the Nobel Peace Prize.{29}

Iraq, a nation patched together in Paris and its aftermath, still boils with religious, ethnic, and cultural dissent. Israelis and Palestinians still clash. China still distrusts the West. Certainly many decisions in intervening years have affected these hotspots, but seeds of conflict were sown in Paris.

What is a biblical perspective on Paris 1919? I don't claim to know which peacemakers may or may not have been following God in their particular choices, but consider three lessons that are both simple and profound:

First: *God's sovereignty ultimately trumps human activity.* God "raises up nations, and he destroys them."{30} He also "causes all things to work together for good to those who love" Him.{31} History's end has not yet transpired. Once it has, we shall see His divine hand more clearly.

Second: *Decisions have consequences.* "You will always reap what you sow!" Paul exclaimed.{32} This applies to nations and individuals. We all face decisions about what foods to eat, careers to pursue and life partners to select, about whether to become friends with God and to follow Him. Our choices influence this life and the next. Our decisions can affect others and produce unforeseen consequences. So . . .

Third: *We should seek to make wise decisions.* Solomon, a very wise king, wrote, "Trust in the Lord with all your heart; do not depend on your own understanding. Seek his will in all you

do, and he will direct your paths."{33}

Decisions have consequences. Are you facing any decisions that you need to place in God's hands?
