

The Development of Modern Culture – Critical Role of Christianity Downplayed

Steve Cable explodes 5 myths about history, showing Christianity's true critical role in the progress and development of culture.

Is our history really what you have been taught in school? For at least the last five decades in schools across this nation, most of us have digested a similar litany of facts about the development of the Western world. Among these commonly accepted facts are these five:

1. The Roman Empire introduced and maintained a period of relative peace in which innovation and free thought could flourish.
2. The Dark Ages, coming after the fall of the Roman Empire, was a period of over 500 years during which the European world languished in feudalism and ignorance.
3. The Protestant Reformation, fueled by the invention of the printing press, introduced a new era of religious freedom.
4. The Scientific Revolution was the result of Europe casting aside religious “superstitions” during the so-called Enlightenment.
5. Protestant missionaries were a negative, colonizing influence on the non-Western world.

In his recent book, entitled *How the West Won: The Neglected Story of the Triumph of Modernity*, Rodney Stark, Distinguished Professor of the Social Sciences at Baylor University, questions these “historical facts” from our childhood along with many others. His premise, based on the current state of historical data and analysis, is that the conventional wisdom about the history of the western world was tainted by the prejudices and lack of knowledge of the early historical writers. His view is backed up by the research and writings of many contemporary scholars. He clearly points out that what is taught in our schools lags far behind the common knowledge held by top researchers in the field. It is interesting to note that this phenomenon is very similar to the difference between high school textbooks on the evolution of man and the current state of research into the origins of life.

Stark concludes that contrary to the conventional wisdom of high school textbooks, the worldview that developed as a result of following after the God revealed in Christian scripture was critical to the advent of our modern age. Only a society steeped in the message of an all-powerful, loving, creator of this universe was postured to take on the scientific and societal endeavors which are crucial to our society today. According to Stark, our modern world is not the result of key people freeing themselves from the chains of religious intolerance to pursue knowledge and truth, but rather the result of people seeking to better understand this universe created out of nothing into an orderly something by our Lord and God.

In the remainder of this article, we will look at these five key concepts of our history still taught to our students today and see how contemporary research has significantly modified

or completely discredited them.

The Impact of Greece, Judaism, and Rome

Apart from periods of Jewish history, most of the world before 600 B.C. was controlled by systems of government that awarded the elite few at the expense of the rest of society. In China, India and Egypt societies had this common theme: "Wealth is subject to devastating taxes and the constant threat of usurpation; the challenge is to keep one's wealth, not to make it productive."[\[1\]](#) Their rulers strived to make it so. Stark pointed this out: "As Ricardo Caminos put it about the ancient Egyptians, 'Peasant families always wavered between abject poverty and utter destitution.' If the elite seizes all production above the minimum needed for survival, people have no motivation to produce more."[\[2\]](#)

Beginning around 600 B.C., the Greek city-states prior to the reigns of Phillip of Macedonia and his son, Alexander the Great, were the first to offer a different economic model on a large scale. "The major benefit of Greek democracy was sufficient freedom so that individuals could benefit from innovations making them more productive, with the collective result of economic progress."[\[3\]](#) This unprecedented freedom was partly the result of Greece having an unfavorable geography with an abundance of mountains, no abundance of natural resources, and no large navigable river. This geography helped to promote the large number of small, independent city states. "Thus, having an unfavorable geography contributed to the greatness of Greece, for disunity and competition were fundamental to everything else."[\[4\]](#) Once Greece was under the rule of the Macedonians and later the Romans, the scale of innovation in the areas of democracy, economic progress, the arts, and technology slowed dramatically.

Unlike other peoples near the cities of Greece, the Jews were greatly impacted by the Greek philosophers. Why? The God the

Jews worshipped was “conscious, concerned and rational”{5} and as such the Jewish theologians were committed to reasoning about God from the things God revealed through Scripture. At this time the vast majority of Jews lived in the Diaspora outside of Palestine. And so, like the Apostle Paul, these Jews were exposed to Greek thought filtered through their understanding of Scripture.

Of course, the early Christians accepted this view of God but also added the idea that our knowledge of God and of his creation is progressive.{6} Understand that our early Christian fathers did not wholeheartedly embrace Greek ideas, choosing to show how Christian doctrines were much more rational. But they did embrace the ideas of reason and logic which were behind Greek philosophy. This train of thought by our Christian fathers set the stage for the development and advances of science. As Stark notes, “The truth is that science arose only because the doctrine of the rational creator of a rational universe made scientific inquiry plausible.”{7}

The rule of the Roman Empire provided centuries of relative peace and free travel throughout the Mediterranean area. This *pax Romana* facilitated the spread of Christianity across the Mediterranean world and thus played an important role in the growth of Christianity. However, Stark suggests that “the Roman Empire as at best a pause in the rise of the West, and more plausibly a setback.”{8}

Most of us probably view the Roman Empire as an expanded version of the great age of Greece where advancements were common in philosophy, commerce and technology. Stark points out that as a large, centrally controlled empire, Rome had plenty of labor and a large distance between the privileged few and the laboring masses. Consequently, the art and literature of the Roman period was fundamentally Greek. There were very few technological innovations developed during this period. In fact, “the Romans made little or no use of some

known technologies, e.g. water power.”{9} They preferred to use manual labor rather than employ labor saving devices.

Stark suggests that two events during the period of Roman control were important to the development of our modern culture: the Christianization of the empire and the fall of Rome. “It was Rome that fell, not civilization. . . the millions of residents of the former empire did not suddenly forget everything they knew. To the contrary, with the stultifying effects of Roman repression now ended, the glorious journey toward modernity resumed.”{10}

The Not-So-Dark Ages

My understanding of the Dark Ages as a student from the 1970’s is probably similar to yours. It was pictured as a time in which European culture took a step backward from the advances of the Roman Empire and made little or no progress in advancing culture, economics, philosophy, or technology. It was a time characterized by wars and the stultifying oppression of the Catholic Church. Many historians of the past wrote that the fall of Rome cast Europe into this dismal age, aided by Christianity which celebrated poverty and urged contentment.

Stark, along with most modern historians, take a far different view of this period of Western history. Stark puts it this way: “The fall of Rome was, in fact, the most beneficial event in the rise of Western civilization, precisely because it unleashed creative competition among the hundreds of independent political units, which, in turn resulted in rapid and profound progress.”{11}

In this culture of independent political units, trade developed and expanded rapidly, the average person ate better and grew larger than in the past because the people could now put to personal use the wealth Rome had previously squeezed from them. “Perhaps the most remarkable aspect of the Dark

Ages myth is that it was imposed on what was actually 'one of the great innovative eras of mankind.'" {12} During this period technology was developed and put into use "on a scale no civilization had previously known." {13}

One of the strongest influences during this period came from the Scandinavians, the Vikings. "The Viking merchants traveled a complex network of trade routes extending as far as Persia. . . (The) Vikings had excellent arms, remarkable ships, and superb navigational skills . . . Their boats were far superior to anything found elsewhere on earth at that time." {14} Our history lessons, however, placed an emphasis on great empires rather than movements impacting our way of life. "Not only have they continued to regret the fall of Rome, but they remember Charlemagne as the man who almost 'saved' Europe. In fact, the Scandinavians were as civilized as the Franks, while William the Conqueror was certainly as able as Charlemagne, and considerably more tolerant." {15}

One of the major events during this period was the rise of capitalism as an economic driver. Capitalism can only exist in societies with free markets, secure property rights and the right of individuals to work where they wish. The Christian West, out from under the yoke of the Roman Empire, was the only society where this move was possible. As Stark explains, "Of the major world faiths, only Judaism and Christianity have devoted serious and sustained attention to human rights, as opposed to human duties. Put another way, the other great faiths minimize individualism and stress collective obligations. They are . . . cultures of shame rather than cultures of guilt. There is not even a word for freedom in the languages in which their scriptures are written." {16} Counter to the position of earlier historians who put the advent of capitalism much later in history, capitalism not only thrived during this period but had been fully debated by theologians who on the whole gave it general approval.

You may remember being taught that during these Dark Ages that

Islamic scholarship and technological innovation kept society moving forward in the areas of science and technology. In fact, Stark points out, "The 'Golden Era' of Islamic science and learning is a myth. Some Muslim-occupied societies gave the appearance of sophistication only because of the culture sustained by their subject peoples – Jews and various brands of Christianity."[\[17\]](#) In fact when they later cleansed their society of these other people, they soon fell back into a state where any technology was bought from the West and in many cases had to be operated by Westerners. One area where this was revealed on multiple occasions was in the area of military strategy and technology. In numerous battles between A.D. 1200 and 1600, Western forces on land and on the oceans typically inflicted casualties upon their Muslim foes at a rate ranging from 10 to 1,000 Muslim casualties for every casualty among the Western forces.

"Despite the record of Muslim failure against Western military forces, far too many recent Western historians promulgate politically correct illusions about Islamic might, as well as spurious claims that once upon a time Islamic science and technology were far superior to that of a backward and intolerant Europe."[\[18\]](#)

"In 1148 all Christians and Jews were ordered to convert to Islam or leave Moorish Spain immediately, on pain of death. . . . And as (they) disappeared, they took the "advanced" Muslim culture with them. What they left behind was a culture so backward that it couldn't even copy Western technology but had to buy it and often even had to hire Westerners to use it."[\[19\]](#)

What we had been taught were Dark Ages of no progress were actually a period of great progress in the development of individual freedom and the concept of capitalism.

The Reformation and Religious Freedom

Martin Luther, the catalytic figure of the Reformation, asserted that salvation is God's gift, freely given, and gained entirely by faith in Jesus as the redeemer. Each person must establish his or her own personal relationship with God. This new emphasis on individual freedom and responsibility was certainly consistent with the key aspects of Western modernity. But the way these ideas played out in society were a different matter.

The popular view promulgated by English and German historians was that the Protestant Reformation, which roughly occurred between A.D. 1515 and 1685, was facilitated by the printing press and the spread of literacy, resulting in a "remarkable revival of popular piety and the spread of religious liberty." You were probably taught that this new view of piety, placing the responsibility of a relationship with God squarely on the shoulders of the individual rather than on the intervening work of the Church, created a new environment of religious tolerance and personal piety. This environment was invigorating to the concepts of scientific and economic progress. However, the real situation was far different from this idealistic view promulgated by English and German historians. Far from introducing religious liberty to the masses, the Protestant Reformation was more about switching one monopoly religion for another.

Stark points out three ways in which earlier historians and sociologists have misrepresented what went on in the spread of the Protestant Reformation. These historians and probably your high school history textbook, taught the following about the Reformation:

1. The Reformation introduced an era of religious freedom in Europe
2. The Reformation was able to spread rapidly because of the

newly invented printing press

3. The Reformation's spread was partially a result of its attractiveness to the common man.

On the first point, rather than introducing an era of religious freedom, the Reformation produced competing monopoly religions. Depending upon the area in which one lived, the pressure to conform to the religion adopted by that region was immense. So what determined whether your region would be Catholic or Protestant? If the area's current Catholic hierarchy was not operating under the rule of local rulers or councils, the rulers were very likely to convert to a Protestant view, thereby removing the influence of the Catholic Church in their domain. Importantly, it allowed them to loot church property in the name of religion. As Stark point out, "It is all well and good to note the widespread appeal of the doctrine that we are saved by faith alone, but it also must be recognized that Protestantism prevailed only where the local rulers or councils had not already imposed their rule over the Church. Pocketbook issues prevailed." [\[20\]](#)

Was it the printing press that allowed the Reformation to spread rapidly? If so, one would expect that cities with printing presses producing Luther's pamphlets and his Bible, would be most likely to align with Protestantism. Yet what we find is a negative correlation between towns with printers who had published Luther's Bible and those towns which had converted to Protestantism. The printing press was certainly a factor in spreading Luther's theology, but if it was the dominant factor we should see a strongly positive correlation, not a negative one. "Indeed, assessments of the impact of printed materials on the success of the Lutheran Reformation too often overlook a critical factor: no more than five percent of Germans in this era could read." [\[21\]](#)

Finally, a widely held belief is that the Lutheran Reformation touched the hearts of the masses, resulting in a huge revival

in personal faith and piety. However, most people were not personally impacted by the theological arguments between Catholicism and Protestantism. The common man in Germany at that time was, at best, semi-Christian. As Stark points out, "Eventually even Martin Luther admitted that neither the tidal wave of publications nor all the Lutheran preachers in Germany had made the slightest dent in the ignorance, irreverence, and alienation of the masses. Luther complained in 1529, "Dear God, help us! . . . The common man, especially in the villages, knows absolutely nothing about Christian doctrine; and indeed many pastors are in effect unfit and incompetent to teach. Yet they all are called Christians, are baptized, and enjoy the holy sacraments – even though they cannot recite either the Lord's Prayer, the Creed or the Commandments. They live just like animals."

The Scientific Revolution and Christianity

The term "Scientific Revolution" was coined, referring to the period in the sixteenth and seventeenth century beginning with Copernicus and ending with Newton, when the rate of scientific advancement was thought to have increased dramatically. However, modern historians say that no such revolution occurred, although the role of science definitely matured during that period of time. Many of us remember being taught three aspects of this so-called revolution that we want to consider:

1. Most key scientific contributors had freed themselves from the rigid dogmas of faith.
2. The Protestant Reformation had freed society from "the dead hand of the Catholic Church," thereby making real scientific thinking possible.
3. Real science could not occur in universities controlled by the churches.

However, Rodney Stark points out that current evidence indicates that all of these claims are false, stating, "Indeed, Christianity was essential to the rise of science, which is why science was a purely Western phenomenon." [\[22\]](#)

Of the 52 most prominent contributors to scientific advancement during this period, we find that 60% of them were devout believers in Christianity. Only one of them was a skeptic toward the message of Christianity. And the rest were classified as conventionally religious. So, the idea promoted by contemporary philosophers that scientific advancement was the result of freeing themselves from belief in the dogmas of the faith could not be further from the truth.

Of these 52 leaders of the scientific community, 26 were Protestant and 26 were Catholic. This equal distribution belies the common wisdom that the Protestant revolution allowed real scientific thinking to begin to take root. It appears that prior advances in scientific thought had prepared the minds of these individuals to advance the frontiers even further, regardless of whether they were Protestant or Catholic. Both faiths believed in God as the Intelligent Designer of a rational universe, and a rational universe was one that could be understood through the application of the scientific method.

As noted earlier, most modern historians sided with the statement, "Not only were the universities of Europe not the foci of scientific activity . . . but the universities were the principal centers of opposition for the new conceptions of nature which modern science constructed." [\[23\]](#) Actually, 92% of these leaders in scientific research spent an extended period of time of ten years or more in the universities. Nearly half of them served as university professors during their careers. In fact, the distinguished historian of science Edward Grant stated, "The medieval university laid far greater emphasis on science than does its modern counterpart." [\[24\]](#)

Stark wrote, "Science only arose in Christian Europe because only medieval Europeans believed that science was possible and desirable. And the basis of their belief was their image of God and his creation."[\[25\]](#) As the distinguished mathematician and scientist, Johannes Kepler stated, "The chief aim of all investigations of the external world should be to discover the rational order and harmony imposed on it by God and which he revealed to us in the language of mathematics."[\[26\]](#) Thus, the so-called scientific revolution occurred not in spite of Christianity but rather directly because a Christian worldview beckoned them to study the nature of our world more closely.

Protestant Missionaries and the Rise of Western Democracies

Protestant missionaries are often portrayed as the villains of imperialistic expansion. They have often been portrayed as having a greater interest in converting their charges to Western culture than introducing them to eternal life through Jesus Christ. However, their personal and public publications do not support this negative view. On the contrary, "Missionaries undertook many aggressive actions to defend local peoples against undue exploitation by colonial officials."[\[27\]](#)

Beyond correcting this distorted view of missionary purpose, modern historians have discovered an interesting impact. A recent study has shown that the rise and spread of stable democracies in the non-Western world can be attributed primarily to the impact of Protestant missionaries. According to a study by sociologist Robert Woodberry,[\[28\]](#) the impact of these missionaries far exceeds that of fifty other control variables such as gross domestic product and whether or not a nation was a British colony. One would think that having a healthy amount of production per individual would be one of the biggest factors leading to a stable democratic government. But the data shows that it has been much more important to

have the teaching and leadership development provided by Protestant missionaries.

In addition, the greater number of Protestant missionaries per capita in a nation in 1923, the lower that nation's infant-mortality rate in 2000. In this case, the effect of having Protestant missionaries was more than nine times as large as the effect of current GDP per capita. In other words, having a history of Protestant missionaries is much more important than having a large amount of money in determining a low infant-mortality rate.

Conclusion

Many of us have been given the impression by educators that the scientific, governmental, and societal advances we enjoy are the result of enlightened people taking off their religious blinders and thinking more clearly about these topics. Sociologist Rodney Stark presents compelling data, arguing that in fact it was the unique worldview of Christianity that created societies in which new ideas could foment and flourish. This Christian worldview was fundamental to the advances in economics, science and government common in our current world. Understanding the worldview that fueled the advances making up our modern world is important if we are to continue to move ahead responsibly.

American Government and Christianity – A Biblical Worldview Perspective

Kerby Anderson looks at how a Christian, biblical framework operated as a critical force in establishing our constitution and governmental system. The founders views on the nature of man and the role of government were derived from their biblical foundation.

America's Christian Roots

The founding of this country as well as the framing of the key political documents rests upon a Christian foundation. That doesn't necessarily mean that the United States is a Christian nation, although some framers used that term. But it does mean that the foundations of this republic presuppose a Christian view of human nature and God's providence.

In previous articles we have discussed "The Christian Roots of the Declaration and Constitution" [on the Web as ["The Declaration and the Constitution: Their Christian Roots"](#)] and provided an overview of the books [On Two Wings](#) and [One Nation Under God](#). Our focus in this article will be to pull together many of the themes of these resources and combine them with additional facts and quotes from the founders.

First, what was the perspective of the founders of America? Consider some of these famous quotes.

John Adams was the second president of the United States. He saw the need for religious values to provide the moral base line for society. He stated in a letter to the officers of the First Brigade of the Third Division of the Militia of Massachusetts:

We have no government armed with power capable of contending with human passions unbridled by morality and religion. Avarice, ambition, revenge, or gallantry, would break the strongest cords of our Constitution as a whale goes through a net. Our Constitution was made only for a moral and religious people. It is wholly inadequate to the government of any other.[*{1}*](#)

In fact, John Adams wasn't the only founding father to talk about the importance of religious values. Consider this statement from George Washington during his Farewell Address:

And let us with caution indulge the supposition, that morality can be maintained without religion. Whatever may be conceded to the influence of refined education on minds of peculiar structure, reason and experience both forbid us to expect that national morality can prevail in exclusion of religious principle.[*{2}*](#)

Two hundred years after the establishment of the Plymouth colony in 1620, Americans gathered at that site to celebrate its bicentennial. Daniel Webster was the speaker at this 1820 celebration. He reminded those in attendance of this nation's origins:

Let us not forget the religious character of our origin. Our fathers were brought hither by their high veneration for the Christian religion. They journeyed by its light, and labored in its hope. They sought to incorporate its principles with the elements of their society, and to diffuse its influence through all their institutions, civil, political, or literary.[*{3}*](#)

Religion, and especially the Christian religion, was an important foundation to this republic.

Christian Character

It is clear that the framers of this new government believed that the people should elect and support leaders with character and integrity. George Washington expressed this in his Farewell Address when he said, "Of all the dispositions and habits which lead to political prosperity, Religion and Morality are indispensable supports."

Benjamin Rush talked about the religious foundation of the republic that demanded virtuous leadership. He said that, "the only foundation for a useful education in a republic is to be laid on the foundation of religion. Without this there can be no virtue, and without virtue there can be no liberty, and liberty is the object and life of all republican governments." [\[4\]](#)

He went on to explain that

A Christian cannot fail of being a republican . . . for every precept of the Gospel inculcates those degrees of humility, self- denial, and brotherly kindness which are directly opposed to the pride of monarchy. . . . A Christian cannot fail of being useful to the republic, for his religion teaches him that no man "liveth to himself." And lastly a Christian cannot fail of being wholly inoffensive, for his religion teaches him in all things to do to others what he would wish, in like circumstances, they should do to him. [\[5\]](#)

Daniel Webster understood the importance of religion, and especially the Christian religion, in this form of government. In his famous Plymouth Rock speech of 1820 he said,

Lastly, our ancestors established their system of government on morality and religious sentiment. Moral habits, they believed, cannot safely be trusted on any other foundation than religious principle, nor any government be secure which is not supported by moral habits. . . .Whatever makes men

good Christians, makes them good citizens.[{6}](#)

John Jay was one of the authors of the Federalist Papers and became America's first Supreme Court Justice. He also served as the president of the American Bible Society. He understood the relationship between government and Christian values. He said, "Providence has given to our people the choice of their rulers, and it is the duty, as well as the privilege and interest of our Christian nation to select and prefer Christians for their rulers."[{7}](#)

William Penn writing the *Frame of Government* for his new colony said, "Government, like clocks, go from the motion men give them; and as governments are made and moved by men, so by them they are ruined too. Wherefore governments rather depend upon men, than men upon governments. Let men be good, and the government cannot be bad."[{8}](#)

The founders believed that good character was vital to the health of the nation.

New Man

Historian C. Gregg Singer traces the line of influence from the seventeenth century to the eighteenth century in his book, *A Theological Interpretation of American History*. He says,

Whether we look at the Puritans and their fellow colonists of the seventeenth century, or their descendants of the eighteenth century, or those who framed the Declaration of Independence and the Constitution, we see that their political programs were the rather clear reflection of a consciously held political philosophy, and that the various political philosophies which emerged among the American people were intimately related to the theological developments which were taking place. . . . A Christian world and life view furnished the basis for this early political thought which guided the American people for nearly two

centuries and whose crowning lay in the writing of the Constitution of 1787.{9}

Actually, the line of influence extends back even further. Historian Arnold Toynbee, for example, has written that the American Revolution was made possible by American Protestantism. Page Smith, writing in the *Religious Origins of the American Revolution*, cites the influence of the Protestant Reformation. He believes that

The Protestant Reformation produced a new kind of consciousness and a new kind of man. The English Colonies in America, in turn, produced a new unique strain of that consciousness. It thus follows that it is impossible to understand the intellectual and moral forces behind the American Revolution without understanding the role that Protestant Christianity played in shaping the ideals, principles and institutions of colonial America.{10}

Smith argues that the American Revolution “started, in a sense, when Martin Luther nailed his 95 theses to the church door at Wittenburg.” It received “its theological and philosophical underpinnings from John Calvin’s *Institutes of the Christian Religion* and much of its social theory from the Puritan Revolution of 1640-1660.”{11}

Most people before the Reformation belonged to classes and social groups which set the boundaries of their worlds and established their identities. The Reformation, according to Smith, changed these perceptions. Luther and Calvin, in a sense, created a re- formed individual in a re-formed world.

Key to this is the doctrine of the priesthood of the believer where each person is “responsible directly to God for his or her own spiritual state... The individuals who formed the new congregations established their own churches, chose their own ministers, and managed their own affairs without reference to

an ecclesiastical hierarchy.”[{12}](#)

These re-formed individuals began to change their world including their view of government and authority.

Declaration of Independence

Let’s look at the Christian influence on the Declaration of Independence. Historian Page Smith points out that Thomas Jefferson was not only influenced by secular philosophers, but was also influenced by the Protestant Reformation. He says,

Jefferson and other secular-minded Americans subscribed to certain propositions about law and authority that had their roots in the Protestant Reformation. It is a scholarly common-place to point out how much Jefferson (and his fellow delegates to the Continental Congress) were influenced by Locke. Without disputing this we would simply add that an older and deeper influence – John Calvin – was of more profound importance.[{13}](#)

Another important influence was William Blackstone. Jefferson drew heavily on the writings of this highly respected jurist. In fact, Blackstone’s *Commentaries on the Laws of England* were among Jefferson’s most favorite books.

In his section on the “Nature of Laws in General,” Blackstone wrote, “as man depends absolutely upon his Maker for everything, it is necessary that he should, in all points, conform to his Maker’s will. This will of his Maker is called the law of nature.”[{14}](#)

In addition to the law of nature, the other source of law is from divine revelation. “The doctrines thus delivered we call the revealed or divine law, and they are to be found only in the Holy Scriptures.” According to Blackstone, all human laws depended either upon the law of nature or upon the law of revelation found in the Bible: “Upon these two foundations,

the law of nature and the law of revelation, depend all human laws.”[{15}](#)

Samuel Adams argues in “The Rights of the Colonists” that they had certain rights. “Among the natural Rights of the Colonists are these: First, a Right to Life; second, to Liberty; third, to Property; . . . and in the case of intolerable oppression, civil or religious, to leave the society they belong to, and enter into another. When men enter into society, it is by voluntary consent.”[{16}](#) This concept of natural rights also found its way into the Declaration of Independence and provided the justification for the American Revolution.

The Declaration was a bold document, but not a radical one. The colonists did not break with England for “light and transient causes.” They were mindful that they should be “in subjection to governing authorities” which “are established by God” (Rom. 13:1). Yet when they suffered from a “long train of abuses and usurpations,” they believed that “it is the right of the people to alter or abolish [the existing government] and to institute a new government.”

Constitution

The Christian influence on the Declaration is clear. What about the Constitution?

James Madison was the chief architect of the Constitution as well as one of the authors of the *Federalist Papers*. It is important to note that as a youth, he studied under a Scottish Presbyterian, Donald Robertson. Madison gave the credit to Robertson for “all that I have been in life.”[{17}](#) Later he was trained in theology at Princeton under the Reverend John Witherspoon. Scholars believe that Witherspoon’s Calvinism (which emphasized the fallen nature of man) was an important source for Madison’s political ideas.[{18}](#)

The Constitution was a contract between the people and had its

origins in American history a century earlier:

One of the obvious by-products [of the Reformation] was the notion of a contract entered into by two people or by the members of a community amongst themselves that needed no legal sanctions to make it binding. This concept of the Reformers made possible the formation of contractals or, as the Puritans called them, "covenanted" groups formed by individuals who signed a covenant or agreement to found a community. The most famous of these covenants was the Mayflower Compact. In it the Pilgrims formed a "civil body politic," and promised to obey the laws their own government might pass. In short, the individual Pilgrim invented on the spot a new community, one that would be ruled by laws of its making.[{19}](#)

Historian Page Smith believes, "The Federal Constitution was in this sense a monument to the reformed consciousness. This new sense of time as potentiality was a vital element in the new consciousness that was to make a revolution and, what was a good deal more difficult, form a new nation."[{20}](#)

Preaching and teaching within the churches provided the justification for the revolution and the establishment of a new nation. Alice Baldwin, writing in *The New England Clergy and the American Revolution*, says,

The teachings of the New England ministers provide one line of unbroken descent. For two generations and more New Englanders had . . . been taught that these rights were sacred and came from God and that to preserve them they had a legal right of resistance and, if necessary a right to . . . alter and abolish governments and by common consent establish new ones.[{21}](#)

Christian ideas were important in the founding of this republic and the framing of our American governmental

institutions. And I believe they are equally important in the maintenance of that republic.

Notes

1. John Adams, October 11, 1798, in a letter to the officers of the First Brigade of the Third Division of the Militia of Massachusetts.
