

“Is It a Good Idea to Marry Someone I’m Not Attracted To?”

I’ve been dating a long time friend of mine for three years, and the subject of marriage came up. She is my best friend and we are both saved. Both of us have never married and are 45 years old. We enjoy each other’s company, and go to church together. But sometimes I don’t think she is pretty. I find myself looking at other girls at times. Would this be hindrance to marriage? I realize that beauty and brawn change over time. But I can’t date her forever and don’t want to lose her friendship. Do you have any advice?

It sure sounds like the Lord has blessed you with a wonderful friend. It’s quite possible you would be better off friends than spouses. If you don’t think she’s pretty, does that mean you’re not really attracted to her? If you’re not attracted to her after three years of dating, it’s probably not going to happen. And marriage to someone who only makes a good friend can range from empty and colorless to downright miserable when your heart longs for passion.

The fact that you find yourself looking at other girls is not a problem. It would be a problem if you LUST after other girls. And it would be a problem if your girlfriend catches you looking at other girls in her presence because I assure you, women’s egos are really just as fragile as men’s.

Read the Song of Solomon. Do you experience that kind of intense love and longing for your girlfriend? That’s God’s intention for marriage. If what you have is nothing more than a comfortable friendship that has been a convenient base for dating, and if it hasn’t developed into real romance after three years, then do yourself and your girlfriend a favor and

find someone that you CAN feel that kind of passion for. I'll tell you a secret about women: we long to be wanted. We long to be thought of as beautiful. We long to be lusted after with a holy lust. If you can't give that to your girlfriend, you are cheating both yourself and her. And that's no way to treat a friend.

Hope this helps.

Romantic Hyperbole: A Humorous Look at Honesty in Love

It seemed like a good idea at the time.

It would be a great way to express my enduring affection for my wife. I would find seven romantic birthday cards and give one to Meg each day for a week, starting on her birthday. It would continue a sweet tradition begun before we married.

Each card would have a simple picture that would tenderly convey our feelings for one another. Inside would be an endearing slogan or affirmation to which I would add a personal expression of my love for her.

I didn't foresee that Day Three would bring an ethical dilemma.

I carefully selected the cards and arranged them in an appropriate sequence. Day One showed a cute puppy with a pink

rose. Inside: "You're the one I love."

Day Two featured a picture of a little boy and girl in a meadow with their arms over each other's shoulders. The slogan: "Happy Birthday to my favorite playmate."

Day Three depicted a beautiful tropical sunset: bluish pink sky, vast ocean, silhouetted palm trees. You could almost feel the balmy breeze. Inside: "Paradise is anywhere with you", to which I added personal mention of places holding special memories for us: an island vacation spot, a North Carolina hotel, our home.

I completed the remaining cards, dated the envelopes, and planned to bestow one card each morning of her birth week. Then reality happened.

You see, I had agreed to go camping with her for Days One and Two. Camping is something Meg thrives on—outdoor living, clean air, hiking, camp fires. It's in her blood. Camping is something I did in Boy Scouts—dust, mosquitoes, noisy campers, smelly latrines. It ranks just below root canals on my list of favorites.

We camped at a state park only fifteen minutes from our home. On her birthday morning, she liked the fluffy puppy. Day Two, the cute kids made her smile. So far, so good.

Meanwhile, I was tolerating camping, doing my best to keep my attitude positive. The food was OK; the bugs were scarce. After two days, I was ready to go home as planned. Meg wanted to stay an extra day. We each got our wish.

Once home and alone, I pulled out Meg's card for "Day Three," the one with the tropical sunset and the "paradise is anywhere with you" slogan.

Should I give her the card? I had chosen to leave the campground. "But," I reasoned with myself, "the slogan was

true lots of the time.”

I settled on a compromise, a post-it note on the envelope explaining, “You may find that this card contains just a bit of romantic hyperbole.”

Might giving it a clever-sounding label defuse my hypocrisy?

The echoes of her laughter still reverberate through our home. I got off easy.

“Speak the truth to each other,” wrote a Jewish sage. “Speak. . . the truth in love,” advocated a first-century biblical writer. Wise advice for just about any relationship.

“Romantic hyperbole” has become a humorous gauge of truthfulness in our relationship, a test for honesty. Neither of us enjoys every location on earth. She feels some sporting events are a waste of time. I can get bored at shopping malls. But as long as we are honest with each other about our feelings, the bond seems to grow stronger.

That’s no hyperbole.

Why Marriages Fail

Why do marriages fail? While the answers to that question are many, there is a growing body of empirical research to suggest there are four negative risk factors that create barriers to oneness in marriage and increase a couple’s chances for marital failure.

I am going to look at these risk factors and see how they can be corrosive elements to oneness in marriage. Most of the material I will cover comes from PREP, which stands for the “Prevention and Relationship Enhancement Program” developed at the University of Denver. The material was originally published in a book entitled *Fighting for Your Marriage*, and has been featured on numerous TV newsmagazine programs like “20/20.” There is a Christian version of this material found in a book written by Scott Stanley entitled *A Lasting Promise: A Christian Guide to Fighting for Your Marriage*. Perhaps you have heard marriage speakers like Gary Smalley or Dave and Claudia Arp recommend this book (which should be available in your local Christian bookstore and is also available online at [Amazon.com](https://www.amazon.com)).

The significance of this research is two-fold. First, it provides a strong body of university research on what makes marriages fail. Other Christian books, though very helpful, are often based upon the opinions and spiritual insights of the authors. The material we will be talking about in this article is based on clinical studies which validate biblical principles others have discussed.

Second, the research provides an extremely accurate predictor of subsequent behavior and marital failure. In one of the key studies, researchers followed a sample of 135 couples for twelve years, starting before they were married. The researchers found that using only data from before the couple married, they were able to differentiate those couples who do well from those who do not, with up to 91% accuracy. In other words, the seeds of distress and possible divorce were already sown before the couples went to the altar.

Now please do not be discouraged by those numbers. At the outset it seems to be telling us that certain marriages are doomed to failure, and there is nothing a couple can do. But

we need to reconsider that conclusion. This research, while showing us marriages which might fall apart, does not suggest that there is nothing we can do about it. This research simply shows us what behaviors can be changed and warns us what will probably happen if we are unwilling or unable to change. As the book of James reminds us, it is not enough to just believe something, we must act upon it (James 1:25, 2:15-18, 3:13).

Since knowing precedes acting, it is necessary to discuss these four negative risk factors that can be barriers to oneness, for oneness is God's design for marriage. Genesis 2:24 says, "For this reason a man will leave his father and mother and be united to his wife, and they will become one flesh." When Jesus was confronted by the scribes and Pharisees about the issue of divorce, He brought them back to this foundational truth and said, "For this reason a man will leave his father and mother and be united to his wife, and the two will become one flesh. So they are no longer two, but one. Therefore what God has joined together, let man not separate" (Matt. 19:5-6).

Escalation

According to the research done over the last two decades, negative patterns can destroy a relationship. Couples who want to save their marriage need to focus on changing these negative behavior patterns. There are four such patterns I will discuss here, the first of which is escalation.

According to the researchers, "escalation occurs when partners respond back and forth negatively to each other, continually upping the ante so the conversation gets more and more hostile."^[1] 1 Peter 3:9 says, "Do not repay evil with evil or insult with insult." But this is exactly what happens with escalation. Each negative comment increases the level of anger and frustration, and soon a small disagreement blows up into a major fight.

Research shows that couples who have a good marriage are less prone to escalation. And if the argument starts to escalate, they are able to stop the negative process before it erupts into a full-blown fight. Marriages that will have problems, and even fail, find that arguments escalate so that such damaging things are said that they may even threaten the lifeblood of the marriage.

Escalation can develop in two different ways. The first is a major shouting fight that may erupt over a conflict as small as putting the cap back on the toothpaste. As the battle heats up the partners get more and more angry, saying mean things about each other. Frequently there are threats to end the relationship. Over time those angry words damage oneness, and angry threats to leave begin to seem like prophecy. Once negative comments are made, they are hard to take back and drive a knife into the partner's heart. Proverbs 12:18 says, "Reckless words pierce like a sword."

These reckless words can do great damage to a marriage because when an argument escalates, every comment and vulnerability becomes fair game. Concerns, failings, and past mistakes can now be used by the attacking partner. Oneness and intimacy can be shattered quickly by a few reckless words.

You may be thinking, "we don't fight like cats and dogs." And while that may be true, your marriage may still have this risk factor. Damaging escalation is not always dramatic. Voices do not have to be raised for couples to get into a cycle of returning negative for negative. Conflict over paying the rent, taking out the garbage, running errands that result in muttering to oneself, rolling your eyes, or throwing up your hands can also be examples of escalation.

Couples who escalate arguments must control their emotions and control their tongues. James writes, "If anyone considers himself religious and yet does not keep a tight rein on his tongue, he deceives himself and his religion is worthless"

(James 1:26). Couples who want a strong marriage must learn to counteract the tendency to escalate as a couple. The key to a strong and stable marriage is learning to control your emotions and learning how to keep a rein on your tongue.

Invalidation

Having covered escalation, I will now turn to the second of the four negative risk factors to oneness. This risk factor is called invalidation. "Invalidation is a pattern in which one partner subtly or directly puts down the thoughts, feelings, or character of the other."[{2}](#)

Invalidation can take many forms. Sometimes it can be caustic, in which one partner (or both) attacks the other person verbally. You can hear, and even feel, the contempt one partner has for another.

Sarcastic phrases like "Well, I'm sorry I'm not perfect like you" or "I forgot how lucky I am to be married to you" can cut like a knife. These are attacks on the person's character and personality that easily destroy a marriage. Research has found that invalidation is one of the best predictors of future problems and divorce.

Jesus taught that attacks on the character of another person are sinful and harmful. "But I tell you that anyone who is angry with his brother will be subject to judgment. Again, anyone who says to his brother, 'Raca,' is answerable to the Sanhedrin. But anyone who says, 'You fool!' will be in danger of the fire of hell" (Matt. 5:22). Calling a person worthless or empty-headed (which is what the Aramaic term *raca* means) is not what a Christian should do.

Invalidation can also be much more subtle. It may involve an argument where contempt for the other partner is not so obvious. One partner may merely be putting the other partner down for his or her feelings. The message conveyed is that

your feelings do not matter. A husband may put his wife down because she is more emotional or because she is more easily hurt by comments. A husband may invalidate a wife's fears about the children's safety. A wife may invalidate a husband's desire to succeed in the company, saying that it really doesn't matter if he becomes district manager. Ultimately the partner receiving these comments begins to share less and less so that the intimate level of sharing evaporates. When this happens, oneness is lost.

Sometimes invalidation may be nothing more than trite cliches like "It's not so bad" or "Just trust in the Lord." While the sayings may be true, they invalidate the pain or concern of the other partner. They make the other partner feel like their fears or frustration are inappropriate. This kind of invalidation is what Solomon called "singing songs to a heavy heart" (Prov. 25:20). When one partner is hurting, the other partner should find words of encouragement that do not invalidate his or her pain or concerns.

The antidote to invalidation is validation. Couples must work at validating and accepting the feelings of their spouse. That does not mean you have to agree with your spouse on the issue at hand, but it does mean that you listen to and respect the other person's perspective. Providing care, concern, and comfort will build intimacy. Invalidating fears and feelings will build barriers in a marriage. Discipline yourself to encourage your spouse without invalidating his or her feelings.

Negative Interpretations

So far we have looked at the negative risk factors of escalation and invalidation. The third risk factor is negative interpretations. "Negative interpretations occur when one partner consistently believes that the motives of the other are more negative than is really the case." [\[3\]](#)

Such behavior can be a very destructive pattern in a relationship, and quickly erode intimacy and oneness in a marriage. A wife may believe that her husband does not like her parents. As a result, she may attack him anytime he is not overly enthusiastic about visiting them. He may be concerned with the financial cost of going home for Christmas or about whether he has enough vacation time. She, in turn, considers his behavior as disliking her parents.

When a relationship becomes more distressed, the negative interpretations mount and help create an environment of hopelessness. The attacked partner gives up trying to make himself or herself clear and becomes demoralized.

Another kind of negative interpretation is mind reading. "Mind reading occurs when you assume you know what your partner is thinking or why he or she did something." Nearly everyone is guilty of mind reading at some time or other. And when you mind read positively, it does not tend to do much harm. But when you mind read on the negative side, it can spell trouble for a marriage.

Paul warned against attempting to judge the thoughts and motives of others (1 Cor. 4:5). And Jesus asked, "Why do you look at the speck of sawdust in your brother's eye and pay no attention to the plank in your own eye?" (Luke 6:41).

Negative interpretations are hard to detect and counteract. Research shows that in distressed marriages there is a tendency for partners to discount the positive things they see, attributing them to causes such as chance rather than to positive characteristics of the partner. That is why negative interpretations do not change easily.

The key to battling negative interpretations is to reconsider what you think about your partner's motives. Perhaps your partner is more positive than you think. This is not some unrealistic "positive thinking" program, but a realistic

assessment of negative assumptions you may be bringing to the marriage.

Did your spouse really forget to do what you asked? Was it intentional or accidental? Does he or she try to annoy you or are you being more critical than is warranted? Most of the time, people think they are doing the best they can. It hurts to be accused of something you never intended to be hurtful. For couples to have a good marriage this pattern of negative interpretation must be eliminated.

Often this is easier said than done. First, you have to ask yourself if your thinking might be overly negative. Do you give your spouse the benefit of the doubt? Second, you have to push yourself to look for evidence that is contrary to your negative interpretation. Often it is easier to see his or her speck than your own plank. Give your mate the benefit of the doubt rather than let inaccurate interpretations sabotage your marriage.

Withdrawal and Avoidance

Escalation, invalidation, and negative interpretations are three of the four negative risk factors identified by researchers at the University of Denver. The last of these has two descriptors: withdrawal and avoidance. These are two different manifestations of the problem wherein a partner is unwilling to get in or stay in a discussion that is too threatening.

“Withdrawal can be as obvious as getting up and leaving the room or as subtle as ‘turning off’ or ‘shutting down’ during an argument. The withdrawer often tends to get quiet during an argument, look away, or agree quickly to a partner’s suggestion just to end the conversation, with no real intention of following through.”[{4}](#)

“Avoidance reflects the same reluctance to get into certain

discussions, with more emphasis on the attempt to not let the conversation happen in the first place. A person prone to avoidance would prefer that the topic not come up and, if it does, may manifest the signs of withdrawal just described.”[\[5\]](#)

In a typical marriage, one partner is the pursuer and the other is the withdrawer. Studies show that it is usually the man who wants to avoid these discussions and is more likely in the withdrawing role. However, sometimes the roles reverse. But, for the sake of this discussion, we will assume that the husband is the one who withdraws.

Why does he withdraw? Because he does not feel emotionally safe to stay in the argument. Sometimes he may even be afraid that if he stays in the discussion or argument that he might turn violent, so he retreats.

When the husband withdraws, the wife feels shut out and believes that he does not care about the marriage. In other words, lack of talking equals lack of caring. But that is often a negative interpretation about the withdrawer.

He, on the other hand, may believe that his wife gets upset too much of the time, nagging and picking fights. This is also a negative interpretation because most pursuers really want to stay connected and resolve the issue he does not want to talk about.

Couples who want to have a good marriage must learn to stay engaged. Paul said, writing to the church in Ephesus, “Therefore each of you must put off falsehood and speak truthfully to his neighbor, for we are all members of one body. In your anger do not sin: Do not let the sun go down while you are still angry, and do not give the devil a foothold” (Eph. 4:25-27).

Although the immediate context in this passage is anger, the broader principle is the importance of not allowing avoidance to become a corrosive pattern in your marriage. Couples should

build oneness and intimacy by speaking openly and honestly about important issues in their marriage.

Conclusion

Each of these four risk factors (escalation, invalidation, negative interpretations, and withdrawal and avoidance) can build barriers in a marriage leading ultimately to loneliness and isolation. The research shows that couples that want a good marriage need to eliminate these risk factors from their marriage, or else the negative factors will overwhelm the positive aspects of the marriage. It is never too late to put your marriage back on track.

For further study on this topic, I would once again recommend that you purchase the book *A Lasting Promise: A Christian Guide to Fighting for Your Marriage*. This book is widely available and is a good source for help in establishing and maintaining the oneness that God desires for every marriage.

Safe Sex?

Starlight dances off the sparkling water as the waves gently lap the shore. A cool breeze brushes across your face as you stroll hand in hand along the moonlit beach.

The party was getting crowded and the two of you decided to take a walk on the deserted waterfront. You've only known each other a short while but things seem so right. You laugh together and sense a longing to know this person in a deeper way.

You pause and tenderly gaze into each other's eyes, blood rushing throughout your body as your heart beats faster. Soon you are in each other's arms kissing softly at first, then fervently. You tug at each other's clothes and both kneel to the sand. The condom comes on. You join in passionate lovemaking, then relax, hearing only the gentle waves and each other's breathing, grateful that you are comfortable in mutual care and that all is safe.

Or is it?

Was the condom you used enough to keep you safe? Aside from the emotional and psychological implications of your romantic encounter, realize that the condom is not a 100% guarantee of safety against AIDS for the same reason the condom is not a 100% guarantee of safety against pregnancy. There's always the possibility of human or mechanical error. Condoms can slip and break. They also can leak. Even the experts aren't certain condoms can guarantee against sexual transmission of the HIV virus.

Theresa Crenshaw, M.D., has been a member of the President's Commission on HIV. She is past president of the American Association of Sex Educators, Counselors, and Therapists^{1} and once asked this question to 500 marriage and family therapists in Chicago: "How many of you recommend condoms for

AIDS protection?"

A majority of the hands went up. Then she asked how many in the room would have sex with an AIDS infected partner using a condom. Not one hand went up.

These were marriage and family therapists, the "experts" who advise others. Dr. Crenshaw admonished them that, "It is irresponsible to give students, clients, patients advice that you would not live by yourself because they may die by it."[\[2\]](#) What does this tell you about the confidence experts have in condoms to protect persons against AIDS?

Not too long ago herpes caught the public's attention. Now, of course, the focus is on AIDS. As with herpes, it is very difficult to be absolutely certain that your partner in premarital sex does not have AIDS and there is no known cure. But, of course, there's a big difference between herpes and AIDS: herpes will make you sick; AIDS will kill you.

Assessing the Risk

After I had made these remarks at a university in California, one young man asked me to explain what I meant when I said that condoms aren't safe. Consider this:

Condoms have an 85% (annual) success rate in protecting against pregnancy. That's 15% a failure rate.[\[3\]](#) But remember, a women can get pregnant only about six days per month.[\[4\]](#) HIV can infect a person 31 days per month.

Latex rubber, from which latex gloves and condoms are made, has tiny, naturally occurring voids or capillaries measuring on the order of one micron in diameter. Pores or holes five microns in diameter have been detected in cross sections of latex gloves.[\[5\]](#) (A micron is one thousandth of a millimeter.) Latex condoms will generally block the human sperm, which is much larger than the HIV virus. (A human sperm is about 60 microns long and three to five microns in diameter

at the head.{6} But the HIV virus is only 0.1 micron in diameter.{7} A five- micron hole is 50 times larger than the HIV virus. A one-micron hole is 10 times larger. The virus can easily fit through. It's kind of like running a football play with no defense on the field to stop you or shooting a soccer ball into an open goal. The hole is huge!

In other words, many of the tiny pores in the latex condom are large enough to pass the HIV virus (that causes AIDS) in its fluid medium.

One study focused on married couples in which one partner was HIV positive. When couples used condoms for protection, after one and one-half years, 17% of the healthy partners had become infected.{8} That' s about one in six, the same odds as Russian roulette.

One U.S. Food and Drug Administration (FDA) study tested condoms in the laboratory for leakage of HIV-sized particles. Almost 33% leaked.{9} One in three.

One analysis of 11 studies on condom effectiveness found that condoms had a 31% estimated failure rate in protecting against HIV transmission. In other words, as the report stated, "These results indicate that exposed condom users will be about a third as likely to become infected as exposed individuals practicing "unprotected" sex.... The public at large may not understand the difference between "condoms may reduce risk of" and "condoms will prevent" HIV transmission. It is a disservice to encourage the belief that condoms will prevent sexual transmission of HIV. Condoms will not eliminate risk of sexual transmission and, in fact, may only lower risk somewhat."{10} Burlington County, New Jersey, banned condom distribution at its own county AIDS counseling center. Officials feared the legal liabilities if people contracted AIDS or died after using the condoms the county distributed. They were afraid the county would be held legally responsible for the deaths. {11}

Over Easy Please

Latex condoms are sensitive to heat, cold, light, and pressure. The FDA recommends they be stored in “a cool, dry place, out of direct sunlight, perhaps in a drawer or closet.”[{12}](#) Yet they are often shipped in metal truck trailers without climate control. In winter the trailers are like freezers. In summer they’re like ovens. Some have reached 185F (85C) inside. A worker once fried eggs in a skillet next to the condoms, using the heat that had accumulated inside the trailer.[{13}](#) Are you thinking of entrusting you life to this little piece of rubber?

Is the condom safe? Is it safer? Safer than what?

Look at it this way: If you decide to drive the wrong way down a divided highway, is it safer if you use a seat belt?[{14}](#) You wouldn’t call the process “safe.” To call it “safer” completely misses the point. It’s still a very risky and a very foolish thing to do.

Remember that a national study found that condoms have a 15% failure rate with pregnancy. Perhaps you have flown in airplanes. Suppose only 15 crashes occurred for every 100 plane flights. Would you say airline travel was safe? Safer?[{15}](#) Would you still fly?

AIDS expert Dr. Redfield of the Walter Reed Hospital put it like this at an AIDS briefing in Washington, DC: If my teenage son realizes it’s foolish to drink a fifth of bourbon before he drives to the party, do I tell him to go ahead and drink a six pack of beer first, instead? [{16}](#) According to Dr. Redfield, when you’re considering AIDS, “Condoms aren’t safe; they’re dangerous.”[{17}](#)

The Test

You might say, “We’ve both been tested for AIDS. Neither of us

has it.”

The time span between HIV infection and detection of HIV antibodies has been found to be anywhere from three to six months, sometimes longer. [{18}](#) In rare cases it can even take years for signs of the virus to appear. [{19}](#) Dr. Redfield says that after he was exposed to HIV in his work, he waited 14 months before having sex with his wife. [{20}](#) Suppose you meet someone who says, “I had an HIV test a year ago; it was negative. I haven’t had sex for a year. I just had another test; it was negative. I’m safe.” You see the test results in writing. Is it safe to sleep with that person?

We all know how hormones can influence honesty. It comes down to this: Are they telling the truth about not being sexually active in the interim? Is there even a chance that person might twist the truth even slightly in order to get into bed with you? Even with the tests, it all boils down to trust. That’s why I say, “It’s very difficult to be absolutely certain that your partner in premarital sex does not have AIDS.”

“Condom sense” is very, very risky. Common sense says, “If you want to be safe, wait.”

The Total You

There are many other benefits to waiting (or to stopping until marriage, if you’re a sexually active single). By “waiting,” I mean reserving sex for marriage.

Sex involves your total personality—body, mind, and spirit. Besides being physically risky, premarital sex can hurt you emotionally and relationally. While you are single, sex can breed insecurity (“Am I the only one they’ve slept with? Have there been, or will there be, others?”). It can generate performance fears that can dampen sexual response. (If you fear even slightly that your acceptance by your partner hinges

on your sexual performance, that fear can hamper your performance.) It can cloud the issue, confusing you into mistaking sexually charged sensations for genuine love.

After you marry, you might wonder, "If they slept with me before we married, how do I know that they won't sleep with someone else now that we are married?" (Marital faithfulness in the age of AIDS is, of course, important both emotionally and physically.) When disagreements crop up with your mate, will you be tempted to ask yourself, "Did we just marry on a wave of passion?" Don't forget flashbacks, those mental images of previous sexual encounters that have a nasty way of creeping back into your mind during arousal. Who wants to be thinking of previous sex partners while making love with their spouse? Worse, who wants their spouse to be thinking of previous sex partners?

Waiting until marriage can help you both have the confidence, security, trust, and self respect that a solid, intimate relationship needs. "I really like what you said about waiting," said a recently married young woman after a lecture at Sydney University in Australia. "My fianc and I had to make the decision and we decided to wait." (Each had been sexually active in other previous relationships.) "With all the other tensions, decisions, and stress of engagement, sex would have been just another worry. Waiting 'till our marriage before we had sex was the best decision we ever made."[\[21\]](#)

Why Is It Hard to Wait?

Apart from the obvious physical power of one's sex drive, there are other equally powerful emotional factors that can make it difficult to wait. A longing to be close to someone or a yearning to express love can generate intense desires for physical intimacy. Many singles today want to wait but lack the inner strength or self-esteem They want to be loved as we all do and may fear losing love if they postpone sex. They are frustrated when unable to control their sexual drives or when

relationships prove unfulfilling.

Often sex brings an emptiness rather than the wholeness people seek through it. As one TV producer told me, "Frankly, I think the sexual revolution has backfired in our faces. It's degrading to be treated like a piece of meat." The previous night her lover had justified his decision to sleep around by telling her, "There's plenty of me for everyone." What I suspect he meant was, "There's plenty of everyone for me." She felt betrayed and alone.

I explained to her and to her TV audience that sexuality also involves the spiritual. One wise spiritual teacher understood our loneliness and longings for love. He recognized human emotional needs for esteem, acceptance, and wholeness and offered a plan to meet them. His plan has helped people to become whole "new creatures,"[{22}](#) that is, "brand new person(s) inside."[{23}](#) He taught that we can be accepted just as we are, even with our faults.[{24}](#) We can enjoy the self-esteem that comes from knowing who we are and that our lives can count for something significant.[{25}](#) He promised unconditional love to all who ask.[{26}](#) Once we know we're loved and accepted, we can have greater security to be vulnerable in relationships and new inner strength to make wise choices for safe living.[{27}](#) This teacher said, "You shall know the truth, and the truth shall make you free."[{28}](#) "My peace I give to you," He explained. "Do not let your hearts be troubled and do not be afraid."[{29}](#) Millions attest to the safety and security He can provide in relationships. His name, of course, is Jesus of Nazareth. I placed my faith in Him personally my freshman year at Duke, Two Lambda Chi's influenced me in that direction. Though I was skeptical at first, it "has made all the difference," as Robert Frost would say.

Sex and spirituality are, of course, quite controversial topics. I realize that our International Fraternity contains a wide spectrum of beliefs on these issues. I offer these

perspectives not to preach but to stimulate healthy thinking.

Diversity was one of the things that attracted me to our chapter at Duke. Politically, philosophically, and spiritually we ran the gamut. There were liberals, conservatives, Christians, Jews, atheists, and agnostics. We tried to respect one another and learn from each other even when we differed on issues like these. That is the spirit in which I offer these remarks; may I encourage you to consider them in the same way.

To summarize, the only truly safe sex is the lovemaking that occurs in a faithful monogamous relationship where both partners are HIV negative. Condoms may reduce the risk of HIV transmission somewhat, but they can't guarantee prevention. Please, don't entrust your life to something as risky as a condom.
